STATE OF INDIANA

THIRD ANNUAL REPORT

OF THE

Railroad Commission

OF INDIANA

1908

TO THE GOVERNOR

INDIANAPOLIS :

WM. R. BURFORD, CONTRACTOR FOR STATE PRINTING AND BINDING

1909

THE STATE OF INDIANA,
EXECUTIVE DEPARTMENT,
January 6, 1909.

Received by the Governor, examined and referred to the Auditor of State for verification of the financial statement.

OFFICE OF AUDITOR OF STATE,
INDIANAPOLIS, January 11, 1909.

The within report, so far as the same relates to moneys drawn from the State Treasury, has been examined and found correct.

JOHN C. BILLHEIMER,
Auditor of State

January 12, 1909.

Returned by the Auditor of State, with above certificate, and transmitted to Secretary of State for publication, upon the order of the Board of Commissioners of Public Printing and Binding.

MARK THISTLETHWAITE,
Secretary to the Governor.

Filed in the office of the Secretary of State of the State of Indiana,
January 12, 1909.

FRED A. SIMS,
Secretary of State.

Received the within report and delivered to the printer January 12, 1909.

E. O. THOMPSON,
Assistant Clerk Printing Board.

STATE OF INDIANA.

RAILROAD COMMISSIONERS.

*UNION B. HUNT, Chairman, Winchester.....Term expires May 1, 1912
WILLIAM J. WOOD, Chairman, EvansvilleTerm expires May 1, 1909
*CHARLES V. McADAMS, Williamsport.....Term expires May 1, 1911
HENRY M. DOWLING, Indianapolis.....Term expires May 1, 1911
JOHN F. McCLURE, AndersonTerm expires May 1, 1912

CHARLES B. RILEY, Secretary.

LEON E. MORTON, Clerk.

H. O. GARMAN, Purdue University, Consulting Engineer.

ALEXANDER SHANE, Chief Inspector.

DAVID E. MATTHEWS, Inspector.

CHARLES M. PREBLE, Inspector.

IRMA RICE, Stenographer.

ETTA SIMMONS, Stenographer.

FLORENCE A. MELOON, Stenographer.

Office, Room 84 State House.

Public Hearing Room, 85 State House.

Chairman's Room, 82 State House.

Commissioners' Room, 50 State House.

*Resigned December 1, 1908.

*Resigned June 8, 1908.

INDIANA STATE LIBRARY

THIRD ANNUAL REPORT

OF THE

Railroad Commission of Indiana.

INDIANAPOLIS, INDIANA,

January 1, 1909.

To the HON. J. FRANK HANLY, Governor of Indiana:

We respectfully submit the Third Annual Report of the Railroad Commission of Indiana.

The Railroad Commission of Indiana completes practically four years of labor; first, under the act of 1905, creating the Commission and giving limited scope to its powers; and afterwards, under the act of 1907, which greatly increased its authority and conferred power to deal with the complicated and perplexing transportation problems of the day.

IN GENERAL.

The year ending December 1, 1908, has not been a very prosperous one for the business and railroad interests of the State. Following the financial panic of November, a year ago, a general business depression spread over the country, and the revenues of the railroads were so materially decreased that in many instances the reports showed heavy deficits. Conditions throughout the country and in the State are now constantly improving, and the outlook bids fair for a resumption of business upon its former scale in the near future. Local traffic on the railroads is gradually expanding, and much improvement is evident in through traffic.

DEPARTMENT OF TARIFFS AND RATES.

Under direction of the Commission, this department is charged with work of filing tariffs, classifications and schedules, procuring obedience to the rules of the Commission governing the construction and filing of tariffs and classifications, general supervision of tariffs

and classifications, checking of rates, preliminary conference and investigation work, and general investigation and report of traffic and trade conditions within the State at all times.

The system of registering and filing tariffs, inaugurated in this department something over a year ago, has been perfected and worked out in an efficient and satisfactory manner. In the files of this department repose some 18,000 tariffs, which are being constantly worked through and the numerous cancellations and changes kept up to date. While not as close a scrutiny and check of tariffs as they are filed has been made, as is desirable, with the necessary enlargement of this department in the future it will be possible for the Commission to be at all times accurately informed as to the exact rate conditions throughout the State. The files of this department are always open to the inspection of the public, and the Commission lends every effort in affording information to shippers.

All informal matters of rate adjustments, applications for approval of refunds, applications to publish rates, on less than statutory notice and rate quotations, are, under the direction of the Commission, handled in this department, and the specific case reports will be found in the report of the Department of Tariffs in Appendix V of this report. Applications for rate adjustments are carefully considered, conferences with carrier and shipper held and every effort made to reach an amicable settlement of the matter through negotiation, all under the approval of the Commission. Applications for refunds are carefully checked, and where the law has not been followed by the carrier in the charging of the lowest legally published rate in effect at the time of the movement of the traffic, the matter is promptly called to the carrier's attention and adjustment of the overcharge required. The statute of the State grants no discretion to the Commission in the way of allowing reparation, and it many times happens that the Commission is compelled to deny an application for refund which is a hardship upon the shipper because of the fact that a reasonable rate had not been lawfully published by the carrier. Applications for the publication of rates upon less than statutory notice, are, under direction of the Commission, carefully investigated and checked and authority to publish is either granted or denied by wire. Quotations of rates are innumerable and every effort is made to afford the shipping public prompt and accurate information along this line.

In this department preliminary investigations of practices,

rates and traffic conditions are conducted under the direction of the Commission, and reports made to the Commission before cases go to general hearing, thus enabling the Commission to approach the trial of a case with necessary information before it to shorten and condense the actual hearing thereof. Rates in controversy are checked, comparative rate, tonnage and classification tables are prepared and submitted to the Commission, practices of the carrier in handling any particular kind of traffic, conditions existing at the point of shipment or receipt of freight, are investigated and reported to the Commission, as well as the investigation of peculiar or unusual trade conditions which may bear upon the matter in controversy. Accurate records, files and dockets are kept of the work in this department and ready reference may be had to all such matters at any time.

Under the direction of the Commission, or a commissioner, conferences are held in this department for the purpose of facilitating the settlement of controversies between carrier and shipper, and it is gratifying to the Commission to report that much good has been accomplished through this medium of bringing the shipper and the carrier together in a harmonious adjustment of their disputes. These conferences in many instances prevent the necessity of long and expensive litigation. Advances and changes in rates, traffic conditions and practices on the part of the carriers are reported from time to time to the Commission, to the end that it may charge itself with information as to the general conditions affecting the traffic of the State. For complete and detailed account, see report of Department of Tariffs.

EXPRESS RATES.

During the year the Commission concluded its inquiry as to express rates into this State, and made an order reducing these rates and condemning the practices of the express companies in making free delivery limits inside of cities and towns, and failing to deliver in all towns of 2,500 inhabitants. Before the Commission could enforce its order a bill was filed against it in the Federal Court, and Judge Anderson granted an injunction. The Commission has moved to dissolve this injunction, which motion is pending at the time when this report is made. For a full account of its proceedings in express matters see formal case No. 143 in Appendix II.

INSPECTION DEPARTMENT.

THE PHYSICAL ROAD.

This Commission has had the power of supervision and inspection of the physical road for two years only. During that time it has established an Inspection Department which is in some respects the most important department of the Commission. It has placed in charge of this department a conscientious and able railroad man, and has employed two practical railroad men to assist him. The Commission concedes that it has not exercised to the fullest extent the important powers conferred by the General Assembly. It has thought best to commence this work conservatively and to improve upon it from time to time as the experience of the commissioners or inspectors should suggest. The Commission believes that it can make a better organization of this department and can do more effective work and is bending its efforts in that direction.

Meantime, to show that a very great deal has been accomplished, we submit in the report of the Inspection Department hereinafter facts which show that we have corrected during the year 693 cases reported to us by our inspectors and have closed and dismissed for good reason 201 cases, and that there are yet pending before us 217 cases, which will receive attention as fast as they can be reached. The Commission, through its inspectors, during the past year has done the following work on the steam railroads, the importance of which will be at once understood when the same is considered:

STEAM RAILROADS.

On the steam railroads there were reported and corrected overhead obstructions other than bridges	1,447
Lateral obstructions reported and removed	351
Lateral obstructions pending	57
Defects on bridges corrected	208
Low highway bridges raised	13
Low highway bridges pending	4
Unsatisfactory method of operating signals corrected.....	6
Defective signals corrected	3
Dangerous highway crossings pending	9
Unsanitary condition of stations corrected	14
Bridge alarms erected	10
Highway crossing signs erected, on miles of road.....	262
Whistling posts erected, on miles of road.....	293
Defects on highway crossings corrected.....	10
Foot guards installed, on miles of road.....	404
Switch lights installed	138
Defects in track corrected	16
Unsanitary condition of closets pending	1

Unsatisfactory and unsafe station platforms corrected.....	12
Insufficient closet conveniencies corrected.....	12
Water barrels installed at wooden bridges, on miles of road.....	296
Crude unsatisfactory signals corrected.....	4
Defects on station grounds corrected	19

ELECTRIC RAILROADS.

On the electric lines, cases of unsatisfactory management corrected..	5
Shelter sheds erected	3
Safety devices installed	1
Bridge defects corrected	10
Unsatisfactory shelter sheds corrected	20
Unsatisfactory switch stands corrected	68
Unsatisfactory switch stands pending	10
Switch lights installed	69
Dangerous highway crossings-interlocks installed	2
In complying with the law in stopping at railroad crossings.....	1
Highway crossing signs erected, on miles of road.....	496
Whistling posts erected, on miles of road.....	142
Highway crossing bells installed	2
Highway crossing bells pending	7
Obstructions to signals corrected	2
Defects on bridges corrected	6
Defective derails corrected	2
Defective depot corrected	1
Defective track corrected	5

INSPECTION OF ELECTRIC LINES.

During the last year the following electric lines were inspected by the inspectors as to their physical condition and operation, and full reports made thereon to the Commission:

<i>Road.</i>	<i>Miles Inspected.</i>
I., C. & S. R. R.....	58.18
I. & L.	47.67
L. & N. I. Light & Power Co.....	28.50
E. & S. I.	48.19
* E. & E.	24.36
E. & Mt. V.	16.90
M. & P.	30.59
* E. S. & N.	24.30
Ft. W. & S.	19.54
K., M. & W.	35.48
T. H., I. & E. Tr.....	352.68
I. & C. Tr.	108.16
T. & C. Tr.....	40.23
Ohio Elec. Line.....	22.36
C., L. & A.	9.13
Angola R. R.	3.75
* St. J. V. Tr.....	42.08

*Combined steam and electric railroad.

<i>Road.</i>	<i>Miles Inspected.</i>
C., S. B. & N. I. Elec.....	67.15
Winona Interurban	32.78
Sou. Mich.	5.50
C., L. S. & S. B.....	69.00

With total mileage of.....1,086.53

STEAM ROADS INSPECTED.

During the past year the steam railroads were inspected as to their physical condition and operation, as shown in detail in the report of the Chief Inspector. Our inspector of safety appliances inspected 24,085 cars, as shown in the report of the Chief Inspector.

ACCIDENT INVESTIGATIONS AND REPORTS.

During this year a great many accidents were investigated by the Commission. The reports of only a few of these are set out in the Chief Inspector's report. It is the purpose of the Commission to provide a more careful and accurate account of such investigations and their results and to report them more fully hereafter. Two thousand five hundred accident reports were made by the railroads to the Commission. These were examined, classified and discussed, not only by the Commission and its inspectors, but by a committee of practical railroad men, experts in the business, selected for this purpose.

ACCIDENT BULLETINS.

During the year the Commission has continued to issue accident bulletins, and Nos. 3, 4, 5 and 6 will be found in this report. These bulletins are not merely statistical, but are intended to go to the public and to railroad men to show what is taking place in the State with reference to accidents, and they contain, besides, practical suggestions, looking to the prevention of accidents. When the Railroad Commission of Indiana commenced issuing accident bulletins it was not aware that such bulletins were also issued by the Board of Trade of Great Britain. During the year we have secured copies of the bulletins issued by the Board of Trade and we find that these are much more completely prepared than are the bulletins of the Indiana Railroad Commission. They contain an account of the investigation of railroad accidents and a summary of all accidents, with the causes thereof, that have taken place during the quarter. They show completeness of detail and of accurate information, which we feel it would be well for us to follow.

FIRST ANNUAL INDIANA RAILROAD CONVENTION.

During the year, under the provisions of an act of the General Assembly of 1907 to provide for the safe operation of trains on steam railroads in this State, the First Annual Indiana Railroad Convention was held. This was to some extent an experiment in railroad regulation; the idea having originated with the Railroad Commission of Indiana. We are glad to say that the convention more than justified the expectations of the framers of the act which brought it into being. It was composed of the Railroad Commission and its inspectors and of an equal number of division superintendents and railroad engineers, conductors and brakemen. It was addressed by eminent railroad authorities, and the attention of the delegates to this convention assembled from all the steam railroads of this State, was sharply called to the fact that many accidents which took place were preventable, and that by the active efforts of the officers and men who operate the railroads in this State a great number of useful lives could be saved.

The proceedings of this convention will be found in this volume and while, as said above, it was the first movement in this direction, it so impressed those who attended it, and we may say, the public of the State, that it has been fitly characterized as "The Great Railroad Advance."

What was learned by the Commission at this convention will enable it to make the next convention far more useful, and may perhaps result in establishing, not only in this State, but in other States, a more efficient and powerful agency to prevent railroad accidents. Before closing our general observations on the regulations of the physical road, we advert to the work of the Commission outside of the State of Indiana. Two important subjects have been kept constantly in mind by the Indiana Railroad Commission looking to the saving of human life. One is the prevention of trespassing on the railroads, the other the avoidance of useless fatalities at grade crossings. With reference to both of these matters the Indiana Railroad Commission has taken a prominent part, which has been duly recognized in the public press outside of the State of Indiana. A member of this Commission is chairman of the Committee on Trespassing on the Railroads and chairman of the Committee on Grade Crossings both of the National Association of Railroad Commissioners and of the North Central Association of Railroad Commissioners. The report on this subject by the chairman of these associations is exceedingly elaborate and contains among other things, a reference and compilation of all the statutes

of the states of the United States, and the customs and laws of many of the states of Europe. This report will be found in the Appendix, and is intended to throw all possible light on these subjects to the end that not only in Indiana but elsewhere throughout the country legislation may take place which will stop a slaughter which is little less than criminal.

This Commission has prepared bills upon both of these subjects which will be introduced into the coming session of the General Assembly. It is trusted that the General Assembly will avail itself of the consideration and study given to these subjects by the Railroad Commission, and will pass these bills.

INTERURBANS.

CONVENTION OF OFFICIALS.

In looking into the condition of interurban roads Chief Inspector Shane found that many of them were operating without any rules, and that there was no uniformity in the rules under which these companies were operating their roads. On his recommendation the Commission called a convention, which assembled at Indianapolis, February 18, 1908. The practical result of this action was the adoption of a uniform code of rules. The same has now been put in force by all, with the probable exception of one interurban of this State. A full account of the proceedings of the convention and a copy of the Code of Rules adopted will be found in the Appendix.

CONNECTION BETWEEN RAILROADS.

During the year both the trial court and the Supreme Court of the State sustained the action of the Commission in ordering connection between the Pennsylvania Railroad and the Chicago and Cincinnati railroads at Richmond, Indiana.

The Commission held that the intent of the statutes of this State was to require railroads operating in this State to connect with each other at their intersections so that the people of the State might enjoy the shortest routes to all markets and have the best possible railroad facilities.

The Commission held also that it had not only the power to compel the connection, but the right to prescribe exactly where the connection should be made. It is interesting to the people of the State to know that the Supreme Court has sustained the Commission squarely with reference to these most important decisions.

BLOCK SYSTEM.

In 1907 the Commission recommended to the Governor for enactment a bill which was passed requiring railroad companies whose receipts per mile were \$7,500.00 or more to install block systems on their railroads by July 1, 1909. In order that the companies might be reminded of their duty in this regard, a year ago the Commission issued a circular letter calling attention to this requirement, and the time in which the improvement must be done. We regret to say that very few of the carriers have taken action to comply with this statute. The Commission regards the enactment as most important and hereby gives notice that it will enforce it by all means in its power.

DEPOTS.

With reference to depot facilities the Commission has done some work, as will be seen by reference to its inspection cases. It has insisted especially upon the requirements of the law at existing depots, that they be well lighted and heated, and supplied with wholesome water and toilet rooms and kept in sanitary condition.

During the year the E. & T. H. R. R. Co. constructed a depot at Evansville at a cost probably of \$300,000.00. The Big Four constructed a new depot at Greensburg, a very creditable building, and reconstructed one at Fairland, and in various other places in the State depot conditions have been improved. However, the Commission thinks that a great deal can be done for the accommodation of the people of this State by providing better depot facilities, and during the present year its inspectors will devote a part of their time to this matter.

The electric lines are building shelter sheds and some very substantial depots. We include in this report a cut of a concrete shelter shed of the Evansville, Suburban & Newburg Railroad, which is very creditable to that company and most useful to its patrons.

DISCIPLINE TALKS TO RAILROAD MEN.

The Commission has commenced the practice of making addresses by its members and by its inspectors to railroad men at various points in the State. The purpose is to get before them the absolute necessity of obedience to the rules and proper discipline in order to prevent accidents and the consequent fatalities among themselves. We expect to greatly enlarge upon this custom during

the present year and the commendation it has received from some of the railroad officials leads us to believe that we will be able to accomplish much good by this action.

UNIFORM MINIMUM LATERAL CLEARANCES.

The safety appliance bill heretofore recommended by this Commission, and passed by the General Assembly provided for lateral clearance of not less than 18 inches from the widest car or locomotive. In endeavoring to enforce this statute the Commission found considerable diversity of practice among the companies with reference to lateral clearances and also found that this matter constituted a great danger to employees in this State.

During the past year a great deal of work has been done to move back structures and line tracks away from structures in order that operation might be safe. The committee of railroad men appointed by the Indiana Railroad Convention requested the Chairman of this Commission to correspond with the American Railway Association with reference to providing a uniform minimum lateral clearance. We wrote the Secretary on December 15, 1908, and December 18, 1908, he responded that the matter would be taken up at the next meeting of the Executive Committee. He also stated, however, that,

“In establishing a uniform minimum lateral clearance for the entire country, there is so much involved and the scope of the question is so great that it will require a great deal of investigation and serious consideration before it is possible to reach a final conclusion. It would be unfortunate to attempt to determine such a subject with undue haste.”

GRADE CROSSINGS—NUMBER ELIMINATED.

At other places in this report will be found allusion to this matter, but too much cannot be said on this important subject. We note from the report of the Railroad Commissioners of Vermont for 1908, that since the spring of 1907, under the laws of that State, forty grade crossings had been eliminated. In each case the town was assessed 10 per cent., the State 25 per cent., and the railroad the remainder, including land damages. With no adequate provision of the law referring to work of this kind in this State, we can not report that grade crossings have been eliminated through the orders of the Commission. We do desire, however, to state here, so that the facts may be noted and considered, that track ele-

vation has proceeded successfully in the City of Indianapolis, that the City of Ft. Wayne is endeavoring to have the tracks in that city elevated, and that the Big Four Railroad between the City of Indianapolis and the Town of Coal Bluff, a distance of sixty miles, in the reconstruction work they have been doing, have eliminated at their own expense, twenty-three grade crossings. The Vandalia Railroad has also eliminated quite a number of such crossings, and altogether we think we can safely say as many as thirty-five grade crossings have been eliminated in this State during the last year. While this is very little, it is a commencement. It is squarely in the right direction, and encourages the Railroad Commission of this State to recommend by every means in its power, the agitation of this question until some adequate commencement will be made looking to the elimination during the course of reasonable time of all the grade crossings, at least 10,000, in this State.

FORMAL PROCEEDINGS.

The Commission has had before it formal controversies upon a variety of subjects, including complaints respecting rates, both freight and passenger; the establishment of switch connections between railroads and between the plants of individuals and railway lines; the interchange of traffic between steam and interurban roads; the division of joint rates in force upon connecting lines; the crossings of railways and construction of interlockers; the classification of freight; the construction of depots and improvement of station facilities and train service; appeals from the resolutions of town boards respecting the protection of railroad crossings in their respective towns; the modification of car service rules, etc. In many instances the carriers have acquiesced in the findings of the Commission. In some cases, notably those wherein the question of proper rates is involved and those concerning interchange of traffic between interurbans and steam roads, the steam lines have resisted the orders of the Commission by proceedings instituted in the State courts.

INFORMAL PROCEEDINGS.

The Commission has had under consideration a large number of proceedings, which have not assumed the status of formal controversies. These have covered a large field, and included, among others, general inquiries into practices of the carriers; construction of railroad statutes and car service rules; questions concerning in-

terlockers; switching service; rates; depot facilities; baggage checking and charges; passenger fares; classification of freight; reconsignments of freight; interchange of traffic; clearances; protection of crossings; complaints against railroad station agents; connections between railroads; refunds; placement of cars; demurrage; claims for shortage; storage charges; express deliveries; liability for lost freight; delays in shipments, etc. Aside from these matters, the Commission has had occasion to reply to a large number of inquiries, submitted personally and by letter, in regard to the laws of the State, customs of railroads, remedies for stated wrongs, and many others, no formal record being kept of the same. In a large proportion of the cases thus brought informally before the Commission, the desired result has been obtained by negotiation; with a minimum of trouble and delay to the parties interested.

PENDING LITIGATION.

The Commission is now engaged, as plaintiff or defendant, in the following litigation:

FEDERAL COURT.

No. 1. Express Companies v. Members of the Commission.

There are six of these cases, being one by each express company, seeking to set aside the order of the Commission recommending certain express rates. Upon a preliminary hearing a restraining order was issued by the court enjoining the Commission from proceeding in the State courts to enforce the proposed rates. Miller, Shirley & Miller, special counsel, have been employed with the consent of the Executive.

No. 2. The Commission v. The Lake Erie & Western Railroad.

The Commission v. The C., C., C. & St. L. Ry. Co.

These are proceedings by the Commission to enjoin the defendant companies from refusing to interchange traffic with the C., C., C. & St. L. Railway at Muncie, Indiana. They were originally instituted in the Delaware Circuit Court and removed by the defendants to the Federal Court. A restraining order was granted in the Delaware Circuit Court, and this restraining order has since been set aside by the Federal Court and the cases are now pending on the action of the court upon the motion to dissolve the restraining order. These cases are in charge of the Attorney-General.

No. 3. The Vandalia Railroad Company v. The Commission.

This is a bill in equity filed by the Vandalia Railroad to set aside an order made by the Commission concerning class rates on its St. Louis Division. An application for a temporary restraining order was denied during the last year. Noble C. Butler, Clerk of the Circuit Court, has been appointed Special Master to take the evidence in this cause. This case is in charge of the Attorney-General. The evidence has been taken and brief prepared on behalf of the defendant.

No. 26. Grand Trunk Railway v. Railroad Commission of Indiana.

This is an appeal to the Supreme Court of the United States from the decision of the Appellate Court of Indiana in Commission's cause No. 1, reported in 40 App. page 168. No special counsel has been employed.

No. 22. The Commission v. The Southern Indiana Railway Company.

This is a proceeding before the Interstate Commerce Commission concerning the distribution of coal cars by the defendant. The evidence was heard at Terre Haute on May 11th and was transcribed and received by the Interstate Commerce Commission at Washington on June 1st. Commissioner McAdams, who conducted this investigation and hearing, has been employed as special counsel in the Supreme Court of the United States, with the consent of the Executive. Oral argument of the cause at Washington, D. C., has been requested by the Railroad Commission.

No. 23. The Commission v. The K. & I. Bridge & R. R. Co. et al.

This is a proceeding before the Interstate Commerce Commission concerning rates of the K. & I. Bridge & Railroad Company. Evidence was heard and brief filed. On November 14, 1908, the Interstate Commerce Commission decided the cause in favor of the contention of the Commission.

STATE COURTS.

Fayette Circuit Court.

No. 4. The Commission v. The C., H. & D. and The C., C., C. & St. L. Railway Companies.

This is an action in the Fayette Circuit Court by the Commission against these companies for a writ of mandate requiring them

to make physical connection between their lines at the City of Connersville, Indiana. The venue of this cause has been changed to Rush County. The writ has been issued and is returnable on June 8, 1908. Jas. W. Noel is special counsel in this case, employed with the consent of the Executive.

Lake Superior Court.

No. 5. C., I. & S. Railway Company v. The Commission.

This is an action by the railroad company against the Commission to set aside the Commission's order heretofore entered requiring construction of a depot at Lake Village, and is pending in the Superior Court at Hammond. Will H. Isham is special counsel in this case, employed with the consent of the Executive.

Bedford Circuit Court.

No. 6. The Commission v. Southern Indiana Railway and The B. & O. S.-W. Railway.

This was an action by the Commission in the Bedford Circuit Court to enjoin further disobedience of the Commission's order fixing rate on coal from the Linton District to Lehman. A hearing was had and a perpetual injunction was granted. An appeal has been taken to the Supreme Court and appellant's brief has been filed. Chas. E. Thompson and H. P. Pearson were special counsel in the court below. Mr. Thompson has been employed as special counsel in the Supreme Court, with the consent of the Executive.

Tippecanoe Superior Court.

No. 7. The Monon Railway v. The Commission.

This is an action by the Monon Company against the Commission to set aside its order concerning the movement of gravel, entered in cause No. 164. The cause has been heard and determined in favor of the Commission, and an appeal has been perfected by the railroad company. Chas. E. Thompson was special counsel in this case in the court below. C. V. McAdams has been employed, with the consent of the Executive, as special counsel on appeal to the Supreme Court. Brief has been filed for the Commission and oral argument requested.

No. 8. Wabash Railway Company v. The Commission.

This is an action by the Wabash Company against the Commission in the Superior Court to set aside its order made with refer-

ence to the movement of gravel from Lafayette. No action has been taken since the cause was filed and no special counsel has been employed.

Bartholomew Circuit Court.

No. 9. Southern Indiana Railway v. The Commission.

C., C., C. & St. L. Railway Company v. The Commission.

These are actions brought by the plaintiff companies against the Commission to set aside its order with reference to rates on coal to Indianapolis and the Gas Belt. Issues in both cases have been closed. Briefs have been prepared upon law questions involved. C. V. Adams has been employed as special counsel, with the consent of the executive.

No. 25. Southern Indiana Railway Company v. Railroad Commission of Indiana and The C., C., C. & St. L. Ry. Co.

This is a suit for an injunction to restrain the Commission from putting into effect the joint rate established in No. 252, for the use of the petitioner and the C., C., C. & St. L. Ry. Co. C. V. McAdams has been employed as special counsel, with the consent of the Executive.

Allen Superior Court.

No. 10. Commission v. Express Companies.

These are numerous cases filed by the Commission in the Superior Court of Allen County to collect penalties for violation of the law by the express companies. The complaints have been filed and are now pending on demurrer thereto by the express companies. Argument has been had and briefs filed. Leonard & Leonard and D. B. Ninde are special counsel in these cases, employed with the consent of the Executive.

No. 29. P., Ft. W. & C. Ry. Co. and Pennsylvania Railroad v. Commission.

Suit to set aside order of the Commission entered in Cause No. 251. Return day, January 15, 1909.

Vermillion Circuit Court.

No. 11. The Southern Indiana Railway Company v. The Commission.

This was an action brought originally in the Circuit Court of Vigo County against the Commission to set aside its order in Cause No. 188 concerning distribution of coal cars. The cross-complaint

was filed by the Commission and a restraining order granted by the Vigo Circuit Court restraining company from further disobedience to the Commission's order, whereupon a change of venue was taken to the Vermillion Circuit Court. On April 4th, 6th and 7th demurrers were argued before Judge Rheuby, who now has the cause under advisement. Robinson & Stilwell are employed as special counsel in this case, with the consent of the Executive.

Montgomery Circuit Court.

No. 12. State of Indiana v. The Monon Railway Company.

This is an affidavit and criminal prosecution against the defendant company concerning the full crew law. The case is in charge of Hon. Martin Hugg as special counsel, employed with the consent of the Executive.

Tippecanoe Circuit Court.

No. 13. State of Indiana v. The Wabash Railroad.

This is a criminal proceeding concerning the full crew law, and is in charge of Martin Hugg, special counsel, employed with consent of the Executive. The company filed a special answer, a demurrer to which was overruled, holding in substance that the law was invalid as applied to an interstate train. No further action has been taken, the court indicating that if the affidavit was changed to show that the train in question was an interstate train he would then quash the affidavit.

Marion County.

No. 14. Commission v. The Monon Railway Company.

This is an action in the Superior Court before Judge Leathers concerning the right to issue free transportation under the act of 1905. The cause was argued orally and briefed by Attorney-General Miller. No action has ever been taken by the court. The cause is in charge of the Attorney-General.

No. 15. Commission v. The Express Companies.

These were numerous actions in the Superior Courts concerning penalties for failure to make delivery and for mandate to require delivery. The causes were determined against the Commission and one of each character of the cases was appealed to the Supreme Court. The latter has since affirmed the judgments of the lower court and overruled a petition for re-hearing filed by the Commis-

sion. This litigation was in charge of the Attorney-General with Merrill Moores as special counsel, employed with the consent of the Executive.

No. 16. P., C., C. & St. L. Railway v. The Commission.

This is an action of the Pan Handle Company against the Commission to set aside its order requiring physical connection between its line and the C., C. & L. at Richmond. The cause has been determined in favor of the Commission by both the lower and the Supreme Courts. Shiveley & Shiveley were special counsel in the court below and were employed as special counsel in the Supreme Court, with the approval of the Executive.

No. 17. Lake Erie & Western Railway v. The Commission.

This is an action by the plaintiff company against the Commission to set aside its order requiring a switch connection to be made for Mr. Jennings in New Castle. The cause has not been heard and is pending in the Superior Court, Room 3. Forkner & Forkner have been employed as special counsel, with the Executive's consent.

No. 18. C., C., C. & St. L. Railway v. The Commission.

This is an action by the plaintiff company in the Superior Court to set aside the Commission's order requiring the Big Four and I. U. Traction Company to interchange traffic at Winchester, Indiana. This order was made upon the petition of the Farmland Stone Company. Marsh & Jacque have been employed as special counsel, with the consent of the Executive. The cause has not been heard.

No. 19. C., C., C. & St. L., L. E. & W. and Monon Railway Companies v. The Commission.

This is an action by these companies in the Superior Court to set aside the Commission's order made concerning the movement of gravel from Lafayette, Indiana, and involves the same matter as the suit brought by the Wabash against the Commission in the Superior court of Tippecanoe County. No action has been taken except that the plaintiff has agreed to paragraph its complaint. No special counsel has been employed in this case.

No. 20. L. E. & W. Railway et al. v. The Commission.

This is an action by these companies against the Commission to set aside its order made with reference to classification of thin cut

lumber. No action has been taken since the complaint was filed and no special counsel has been employed.

No. 21. State of Indiana v. The Vandalia Railroad.

This is a criminal proceeding in the criminal courts of Marion County involving the full crew law instituted by special counsel, Martin Hugg. Hearing was had, the finding entered in favor of the state, and upon the judgment so rendered an appeal is now pending in the Supreme Court. Senator Hugg has been directed to institute an additional prosecution against the Louisville Division of the Pan Handle to determine the question of the right of the companies to use train porters as brakemen.

Senator Hugg's employment, entered into with the Executive's consent, with reference to the full crew law, embraces all the litigation along that line and extends to service in the Supreme Court of the United States, should the cases go that far.

No. 27. Railroad Commission v. Southern Indiana Railway and C., C., C. & St. L. Railroad.

Suit by the Commission to enjoin these railroads from refusing to move traffic pursuant to the order of the Commission. An injunction was granted, until final hearing. The case has been orally argued, and briefed, and is in charge of C. V. McAdams as special counsel, employed with Executive approval.

No. 30. C., C., C. & St. L. Ry. v. Commission.

Suit to set aside order entered in Cause No. 250. Return day, January 15, 1909.

Gibson Circuit Court.

No. 24. In the Matter of Petition of Peter Folz et al. for Relocation of Public Highway.

This was a proceeding looking to the relocation of a highway over the right of way of the E. & I. Railway. The Commission intervened and objected to the relocation on the ground that such would be extremely dangerous. The matter was argued orally and by briefs, on behalf of the Commission.

Wayne Circuit Court.

No. 28. C., R. & Ft. W. R. R. Co. v. Railroad Commission et al.

Suit to set aside an order of the Commission requiring that the cost of erection and maintenance of an interlocker at Decatur should be borne in stated proportions by the Chicago & Erie Rail-

road, the Toledo, St. Louis & Western Railroad and the plaintiff. A demurrer to the original complaint was sustained. An amended complaint has been filed and a demurrer thereto by the Commission has been submitted to the court, and briefed.

SUGGESTED LEGISLATION.

The Commission respectfully recommends that legislation upon the following subjects be enacted at the next session of the General Assembly:

1. The Railroad Commission law should be so amended that in proper cases the Railroad Commission may intervene in proceedings for the location, change or extension of a public highway over the right of way of a railway, outside of the corporate limits of cities and towns; where, in its judgment, such location, change or extension would not be advisable from the standpoint of public safety.

2. A law should be passed providing a uniform method for presenting (to railroads) shippers' and consignees' claims against the same, with the kind of proof thereof which should be submitted to the carrier, and imposing upon the latter the duty of supplementing this proof so far as it is able. The law should also include a penal provision intended to secure prompt settlement of shippers' claims against railroads, where the statutory method of proving the same has been followed.

3. A law should be passed giving the Commission authority to permit the putting into effect of emergency rates by a carrier, where no rates have been legally published for the movement of a specific class of traffic and an emergency exists for the immediate taking effect of such rates without formal publication.

4. A law should be passed giving the Commission authority to permit refunds or reparation, in proper cases; such authority, as to intrastate business, to be similar in extent to that now possessed by the Interstate Commerce Commission as to interstate transactions.

5. The Railroad Commission Act (Sec. 10 (d)) should be so amended as to permit the issuance by common carriers of non-negotiable bills of lading heretofore known as "straight consignment" bills of lading, which have never possessed a negotiable character.

6. The Safety Appliance Law (Acts 1907, p. 186) should be so amended as to provide punishment for wrongful destruction or interference with the operation of safety appliances or appliances used to protect highway crossings; such destruction or interference being made a misdemeanor.

7. A statute should be passed to prevent trespassing upon railway tracks, and punishing all persons who use such tracks as a footway. The railway employes, including section men, trainmen, and inspectors, should be given constabulary powers in the enforcement of the law.

8. The law (Burns Stats. 1908, Sec. 2674) regarding the running of crossings by enginemen without stopping, should be so amended as to provide for only a fine for the first offense and for fine and imprisonment in the county jail for the second and each subsequent similar offense; the provision as to imprisonment in the State penitentiary to apply only to the second and subsequent offenses.

9. The Safety Appliance Law (Acts 1907, p. 186) should be so amended as to require adequate and properly working hand-brakes to be placed upon all cars, both freight and passenger, including interurbans; and as to the latter, the hand-brakes should be required to operate independently of the air or power brakes.

10. The cities and towns law should be so amended as to give the Commission authority to require the removal of lateral and overhead obstructions near railroad tracks in cities and towns.

11. A law should be enacted providing for the elimination of grade crossings throughout the State, by requiring the steam and electric railroads to separate a specified number of grades each year, for each 100 miles of railroad or fraction thereof, owned or operated by them. The expense of separation should be divided between the railroads and the counties, cities or towns wherein the crossings are located, according to some fair basis.

12. The Railroad Commission Act (Sec. 19) should be amended so as to require immediate telegraphic report to the Commission of all accidents occurring upon any railway in the State.

13. A statute should be enacted making it a misdemeanor, punishable by fine and imprisonment, for any person to pass under or through railway gates at highway crossings when the same are down.

14. The Towns and Cities Code should be so amended as to permit an appeal to the Railroad Commission from town boards and city councils, in regard to ordinances governing the speed of railway trains within the corporate limits.

We attach hereto and make part of this report the following :

APPENDIX II.

Formal Proceedings.

FORMAL PROCEEDINGS.

No. 6. Schnull & Co. v. Vandalia Railroad Company.

Since our last report the injunction suit commenced by respondent to enjoin the enforcement of the Commission's order in the above cause, has been referred to Hon. Noble Butler, Special Master, and the evidence is being taken.

No. 23. Edward T. Slider v. Southern Railway Company.

Since our last report the Appellate Court has rendered a decision sustaining the order of the Commission entered in the above entitled cause. And the rates reduced and ordered by the Commission have been made effective.

No. 41. Bash Packing Company et al. v. Southern Railway Company et al.

Since our last report the Appellate Court has decided an appeal in the above cause, sustaining the Commission's order entered therein, and the reduced rates have been made effective.

Subsequently the Commission promulgated a general rule for securing refunds of excess freight charges collected under circumstances similar to those involved in this case. This rule is as follows:

STATE OF INDIANA.

RAILROAD COMMISSION OF INDIANA.

RULE GOVERNING REFUNDING OF OVERCHARGES BY CARRIERS IN LITIGATED CASES.

Whenever any carrier has, pending litigation, collected freight charges in excess of those prescribed by the Railroad Commission of Indiana, and claim therefor is made by the person, or persons, entitled to a refund of the same, such claim, or claims, shall be evidenced by the claimant, (1) by the paid expense bills issued upon the shipment in question, if such are available to the claimant; (2) if not so available, then by a duly verified statement of the amount of such claims, accompanied by an itemized statement showing date, origin and destination of each shipment, name of consignee, article consigned, quantity, initials and numbers of each car, rates charged and lawful rates chargeable on each shipment, and the amount of each claim thereon. Such statement shall be accompanied by the original bills of lading, if such are available to the claimant, or by duplicates or copies thereof, if the originals cannot be obtained by him, provided such duplicates or copies are available to the claimant. If any expense bills, original bills of lading, or duplicates or copies of such bills of lading should not be available to the claimant, this fact shall be averred in the sworn statement above mentioned; and if duplicates or copies of the original

bills of lading are presented, each must be clearly identified by reference in the sworn statement aforesaid and their accuracy must be sworn to therein. (3) If neither of the foregoing methods is available to the claimant, he shall file with the carrier as complete a statement of his several claims, duly verified, as he is able to prepare. The carrier, within ten days after receipt of such claim so evidenced, shall either deliver to said claimant a written memorandum accepting said statement as correctly setting forth the amount due thereunder, or shall deliver to the claimant an itemized, written statement showing the date, origin and destination of each shipment referred to in such claim, name of consignee, quantity, initials and numbers of each car, rate charged on each shipment, amount of overcharge on each shipment, and all other facts necessary for the complete evidencing of such claims. Should the carrier delay both the delivery of said memorandum of acceptance and the furnishing of the evidence for more than ten days after receiving the claimant's statement last above mentioned, said claim shall be deemed presented at the time such statement is filed with the carrier by the claimant, and the penalties provided by law shall attach 30 days after such presentation, if payment of the claim is not sooner made.

Upon receipt by the claimant from the carrier of the evidence above mentioned, the claimant, if satisfied with the same, may file his acceptance thereof with the carrier and his claim shall be deemed presented from the date of such filing. If the carrier's statement is incorrect, the claimant shall file with the carrier a final, verified statement of claims, based upon the facts within his knowledge and the facts ascertained from the carrier's statement aforesaid, and such claim shall be deemed presented from the date of filing such final statement.

The carrier by whom such claim is owing shall pay the same in cash to the person or persons entitled to receive the same within thirty days after presentation to it of such claim.

BY ORDER OF THE COMMISSION.

August 28, 1908.

No. 55. P. H. and F. M. Roots & Co. et al. v. Cleveland, Cincinnati, Chicago & St. Louis Railway Company et al.

Since our last report suit has been begun in the Fayette Circuit Court by the respondents to set aside the order of the Commission. Summons has been issued and the matter is now pending. James W. Noel being employed as special counsel.

No. 56. Indianapolis & Louisville Railway Company crossing Southern Indiana Railway Company at Midland, Indiana.

Since our last report this interlocking plant has been inspected by the Commission's inspector, approved by the Commission and the companies authorized to run the crossing without stopping from and after April 9, 1908.

No. 73. John D. Moore et al. v. Southern Indiana Railway Company.

Since our last report the above cause has been considered by the Commission and an order entered therein, requiring the respondent to file with the Commission a rate of 23.33 cents per ton on gravel in carload lots when coming off the Evansville & Indianapolis Railroad at Elnora, Indiana.

No. 80. Elgin, Joliet & Eastern Railroad crossing Chicago, Indianapolis and Louisville Railway Company and Michigan Central Railroad Company at Dyer, Indiana.

Since our last report, this interlocking plant has been completed, inspected by the Commission's inspector and approved, the railroads being authorized to run the crossing without stopping from and after April 23, 1908.

No. 85. Cleveland, Cincinnati, Chicago & St. Louis Railway Company crossing Indianapolis, Crawfordsville & Western Traction Company at Moorefield, Indiana.

Petition and plans filed and approved. The plant was erected and approved November 24, 1908, and an order issued authorizing the running of the crossing without stopping, as provided by law.

No. 86. Pittsburgh, Ft. Wayne & Chicago Railroad Company crossing the Lake Erie & Western Railroad and the Vandalia Railroad at Plymouth, Indiana.

Since our last report this interlocking plant was put in operation pending inspection. It was subsequently inspected by the Commission's consulting engineer and approved. The railroads were authorized to run the crossing without stopping from and after July 7, 1908.

No. 95. Railroad Commission of Indiana v. Chicago & Erie Railroad Company, Grand Rapids & Indiana Railway Company, Toledo, St. Louis & Western Railroad Company, Cincinnati, Richmond & Ft. Wayne Railroad Company.

Since our last report suit has been begun by the Cincinnati, Richmond & Ft. Wayne Railroad Company in the Wayne Circuit Court, contesting the order of the Commission respecting the expense of maintaining this plant. A demurrer to the complaint was sustained. An amended complaint has since been filed and the matter is still pending on demurrer to the amended complaint.

No. 116. Pittsburgh, Fort Wayne & Chicago Railroad Company crossing Lake Shore & Michigan Southern Railway at junction with Grand Rapids & Indiana Railway west of Ft. Wayne, Indiana.

Since our last report the interlocking plant at this point has been approved, pending further inspection. Subsequently additional plans were filed, showing installation of derail and same were approved.

No. 124. Cleveland, Cincinnati, Chicago & St. Louis Railway Company, reconstruction of Interlocking Plant at Colfax, Indiana.

Since our last report the Commission overruled objections to this plant, filed by the Vandalia Railroad, and the plant was approved.

No. 141. Cleveland, Cincinnati, Chicago & St. Louis Railway Company, proposed system of signalling for tracks at Massachusetts Avenue, Indianapolis.

Since our last report this plant has been inspected and approved. An order was issued allowing the companies to run the crossing without stopping from and after June 4, 1908.

No. 146. S. P. Jennings v. Lake Erie & Western Railroad Company.

The Lake Erie & Western Railway has begun suit against the Commission in the Marion Superior Court to set aside an order in the above cause, requiring switch connection to be made for the petitioner. The Court decided that the switch should be put in at the cost of petitioner. The litigation was ended at the petitioner's request.

No. 147. Pittsburgh, Cincinnati, Chicago & St. Louis Railway Company, depot at New Castle, Indiana.

This case is reported on page 87 of the Annual Report of the Railroad Commission of Indiana for 1907. Shortly after the case was first filed it was heard at New Castle, and we quote from the Report of 1907 as follows:

"After hearing the evidence consultation was held with the railroad officials and with some of the petitioners, and it was agreed that no formal order should be made for the present, but that the Commission should take the matter up and endeavor to secure an amicable adjustment thereof. The matter was taken up with Mr.

R. E. McCarty, general superintendent of the Pennsylvania lines, and also was talked over informally with Mr. H. A. Boomer, general superintendent of the Lake Erie & Western Railway Company. Both of these gentlemen express the opinion that the matter could be arranged and that a new station would be built at New Castle."

Mr. McCarty, the general superintendent of the Pennsylvania lines, stated to the Commission that plans for the construction of a depot at New Castle had been made and were in the hands of Division Superintendent Neff, who had the matter under consideration in connection with the Lake Erie & Western Railway officials. From the assurance given the Commission we had every reason to believe that a new depot would be built at New Castle before the close of 1908. The railroad officials, however, contend that financial conditions have made this impossible, though the Pennsylvania people say they are ready to proceed with their part of it, and that they are willing to build a separate depot. The people of New Castle, however, so far as we are advised, prefer a union depot to be built and used by the two railroads. The Commission is of the opinion that the promise of the railroad officials to construct a depot at New Castle were made in good faith and that it would be carried out as soon as financial conditions will warrant.

No. 149. Vandalia Railroad crossing the Chicago & Eastern Illinois Railroad at Brazil, Indiana.

Since our last report this interlocking plant has been examined and conditionally approved, and the companies authorized to run the crossing without stopping according to law, from and after September 17, 1908.

No. 154. Farmland Stone Company v. Cleveland, Cincinnati, Chicago & St. Louis Railway Company and the Union Traction Company.

Since our last report an action has been commenced by the Big Four Railway in the Superior Court of Marion County to set aside the Commission's order requiring the Big Four and Indiana Union Traction Company to interchange traffic at Winchester, Indiana. The case is now pending.

No. 164. Lafayette Gravel and Concrete Company v. Chicago, Indianapolis & Louisville Railway Company and the Lake Erie & Western Railroad Company.

Since our last report the Monon Railway has begun an action to set aside the order of the Commission entered in the above cause.

The suit has been determined in the Tippecanoe Superior Court in favor of the Commission. The cause will be appealed by the Monon Railway.

No. 168. Commercial Club of Richmond v. Chicago, Cincinnati & Louisville Railroad Company and the Pittsburgh, Cincinnati, Chicago & St. Louis Railroad Company.

The Pan Handle Railroad has instituted a suit against the Commission to set aside its order entered in the above cause. The lower court sustained the decision of the Commission and on appeal to the Supreme Court the judgment of the lower court in favor of the Commission has been affirmed.

No. 169. Elgin, Joliet & Eastern Railway crossing Gary & Western Railway Company and Michigan Central Railroad Company at Ivanhoe, Indiana.

Since our last report this plant has been inspected and authority issued to place the same in temporary use from and after August 4, 1908. Blue prints of proposed changes were afterwards filed and approved by the commission.

No. 173. Application of St. Joseph Valley Railroad Company to cross the Lake Shore & Michigan Southern Railway in the City of Angola, Indiana.

Since our last report an application for an extension of time, within which to complete the crossing in question was granted, completion to be made by December 31, 1908.

No. 174. Chicago & Erie Railroad crossing Vandalia Railroad at Newton, Indiana.

Plans filed and approved, subject to conditions. The plant was subsequently examined and approved, September 28, 1908.

No. 177. John Hess et al. v. Chicago, Indiana & Southern Railroad Company, for depot at Lake Village.

This matter was originally filed with the Commission on September 10, 1907, and the opinion of the Commission appears in the Commission's 1907 report. An order was issued directing that the Chicago, Indiana & Southern Railroad Company construct a depot, stock pens, and other facilities at Lake Village. Suit was brought by the respondent in the Lake Circuit Court to set aside the order of the Commission and a change of

venue was taken by the railroad to Porter County; later a conference was arranged between C. W. Hotchkiss, general manager of the Chicago, Indiana & Southern Railroad; H. D. Howe, general counsel of said road, and by certain citizens of Lake Village, and Mr. Will H. Isham, their attorney, and this conference was held in the office of the Chairman of the Commission, and in his presence, during the month of July, 1908. At this conference it was agreed between the representatives of the people of Lake Village and the representatives of the Chicago, Indiana & Southern Railroad Company that that part of the order of the Commission concerning stock pens should be abrogated and that the railroad would erect a suitable depot to be not less than 16x24; to have freight room and waiting room; that it would supply additional conveniences by constructing a platform. The railroad company would not agree to place an agent at Lake Village, but thought that an arrangement might be made by which they could have a person take charge of the ticket selling. They agreed to put in a telephone so that persons waiting for trains could ascertain from other stations whether or not trains were on time. This agreement has not yet been carried out. A building was moved from South Bend which is unsatisfactory to the people of Lake Village. The general manager of the Chicago, Indiana & Southern insists that when this building is placed in proper position, painted and completed, it would be substantially in compliance with his agreement with the people of Lake Village and their counsel, and so the matter stands at the time of making this report.

No. 178. Chicago, Indiana & Southern Railroad crossing Chicago Terminal Transfer Railroad and the Elgin, Joliet & Eastern Railroad at Grasselli, Indiana.

Since our last report plans for changes in this plant have been filed, examined and approved by the Commission, subject to conditions.

No. 179. Chicago, Indiana & Southern Railroad crossing the Chicago & Indiana Air Line Railroad, the Chicago Terminal Transfer Railroad, the Elgin, Joliet & Eastern Railroad at East Chicago.

Since our last report an order has been made in this cause relieving the petitioner from obligation to connect with the Chicago & Indiana Air Line in the streets of East Chicago. Subsequently, the Commission approved the plant, subject to conditions.

No. 188. Calora Coal Company v. Southern Indiana Railway Company.

Suit has been brought in the Circuit Court of Vigo County to set aside the Commission's order in this cause. A cross-complaint was filed by the Commission and a restraining order granted, forbidding further disobedience of the Commission's order. The matter is now pending, a change of venue having been taken to the Vermillion Circuit Court.

No. 193. Cleveland, Cincinnati, Chicago & St. Louis Railway Company, interlocker and signalling system at Carbon, Indiana.

Since our last report this plant has been inspected by the Commission's consulting engineer, approved and an order issued permitting its operation from and after June 4, 1908.

No. 195. Indianapolis & Louisville Railway crossing Evansville & Indianapolis Railroad at Clay City, Indiana.

Since our last report this plant has been completed, inspected by the Commission, and conditionally approved. An order has been entered permitting the crossing to be run without stopping, according to law, from and after June 27, 1908.

No. 197. Cincinnati, Bluffton & Chicago Railroad Company, petitioner, v. Fort Wayne, Cincinnati & Louisville and Lake Erie & Western Railroad Companies, respondents.

The petitioner, the Cincinnati, Bluffton & Chicago Railroad Company, filed a petition with the Commission asking that it be permitted to cross the respondents' lines at grade within the corporate limits of Bluffton, Indiana, and that the Commission prescribe the terms and conditions upon which such crossing should be made. The respondent companies objected to the crossing being made at grade, and while the case was pending before the Commission a suit was filed by the petitioner in the Wells Circuit Court to compel the respondents to permit the petitioner's line to cross its track in the said city of Bluffton. The respondent companies then filed a petition with the Railroad Commission of Indiana asking that no further steps be taken in the premises by this Commission while the case was pending in the Circuit Court, as it was unfair and inequitable to permit the petitioner, the Cincinnati, Bluffton & Chicago Railroad Company, to prosecute suits in two different forums at the same time and for the purpose of accomplishing the same result. The matter was taken up by the Commis-

sion and finally resulted in an amicable adjustment between the two companies. A contract showing the terms upon which said crossing was to be made and signed by the petitioner and the respondent, was filed in the office of the Railroad Commission and approved by this body and the case closed.

No. 198. Lafayette & Logansport Traction Company v. Vandalia Railroad Company and Wabash Railroad Company.

Since our last report amended plans for the construction of this interlocking plant have been filed; the plant has been constructed, inspected and conditionally approved by the Commission.

No. 205. Indiana Bridge Company v. Cleveland, Cincinnati, Chicago & St. Louis Railway Company et al.

Since our last report the above cause has been heard and the petition dismissed. The opinion of the Commission was rendered by Commissioner Wood, and is as follows:

In this case counsel for petitioners claim that the power to make average or reciprocal demurrage rules is given in the first part of section 3 of the General Commission Act of 1907, page 458. We are unable to come to this conclusion. By virtue of this provision of the act we may adopt all necessary rules and regulations to govern car distribution and delivery, and demurrage rules and charges and for car service, but, so far as we can perceive, the words, "car distribution, delivery, demurrage rules and charges and car service," do not include the idea of reciprocal or average demurrage. Demurrage and other car service charges in the ordinary sense of the words, are charges in favor of the carrier or person owning the vessel or car and are not charges in favor of the shipper or consignee. If a new, additional and distinct right so far reaching as reciprocal demurrage had been intended, it would require clear and specific words and phrases and not the general expression of an old and well-known right and custom which had obtained heretofore, not to the persons claiming in this petition, but to other persons adversely interested.

Evidently, however, this provision of the statute is in *pari materia* with other parts of the same act, and other acts, and refers to them and will have to be construed with them. This provision, first part of section 3, consists of and is included in a general definition of the duties and powers of the Commission; the following provision in the same section is confined to the definition and exercise of the specific power invoked by the petition in this case. The first provision refers to the general duty and authority of the Commission as "*hereinafter provided*," to adopt all necessary rules and regulations for demurrage and car service. As hereinafter provided? Where? In subdivision f of the same section the matter of car service and demurrage rules and charges is "*hereinafter provided*" by the Assembly, and the specific duty and power of the Commission as to demurrage is differentiated from other powers and defined and declared to be that—

"(f) The Commission shall enforce, as hereinafter provided, reasonable and just rates of charges for each railroad company, subject hereto for the use or transportation of loaded or empty cars on its road; and may so enforce for each railroad, or for all railroads alike, reasonable rates for storing and handling of freight, and for the use of cars not loaded or unloaded within fifty-eight hours after notice of arrival and placement for service, not to include Sundays or legal holidays."

Now it will be noted that there are two distinct rights of different parties affirmed in this subdivision:

First. That the Commission shall enforce reasonable and just rates of charges not for the shipper, "but for each railroad company subject thereto," and this is obligatory on the Commission; it shall enforce these charges *for the railroad company*. We must construe these words in their obvious sense, and in view of the well-known condition of the scarcity of cars, and we must think that the General Assembly meant that its Railroad Commission should prescribe reasonable rates for the railroad companies in order to compel the loading or unloading of cars, in order to expedite the movement of cars for the benefit of other shippers and all shippers who needed them.

Second. But this subdivision did not stop here. It provided also most important rights for the shipper. No rate or charge can be made against the shipper until forty-eight hours of free time has elapsed, and even then this forty-eight hours' period shall not commence to run until notice of the arrival of the cars has been given and placement of the cars has been made. Now then, as the General Assembly has so clearly limited the power of the Commission on this subject by thus defining what rights of the carrier and shipper may be regulated by the Commission, the courts would set aside as being without authority any order made by us outside of these specific limitations of this part of the act.

To put it another way. We may enforce charges for railroad companies against shippers for failing to discharge cars after the statutory period, but where is any power given or where are the words in this specific definition of our powers on this subject to enforce a charge in favor of the shipper? Reciprocal or average demurrage, as it is sometimes called, is not provided at all. The shipper has certain rights, it is true.

- (1) To have notice of arrival of his car.
- (2) To have the car placed.
- (3) Forty-eight hours to load or unload.

But the closest scrutiny will extract nothing else in his favor, and certainly not a word or line to authorize this Commission to go inside of the free time against the shipper, or to go outside of the free time, with a reciprocal or average demurrage rule against the carrier by placing a charge on a single car to be paid or accounted for in favor of the shipper or averaged up in his favor, a matter absolutely foreign to the purposes of this part of the law. Suppose a single car was detained by the shipper, for instance, a high-class refrigerator or furniture car—very scarce and very much needed—imagine, further, an average rule made by us under this statute as the aim of right under which the shipper held this car five days in addition to the forty-eight hours of statutory time; it is not credible that any court

appealed to would not grant a mandate to enforce the release of the car after forty-eight hours, there not appearing the slightest recognition of the right claimed here of a charter or temporary ownership or right to use the car, except for forty-eight hours' time to load or unload after notice and placement of the car.

We are confirmed in these views by what has already taken place in this behalf. Before the organization of the Railroad Commission the Indiana Car Service Association had made certain rules of car service. In our formal hearing No. 48, Indiana Veneer and Lumber Co. and S. Bash & Co. v. the B. & O. R. R. Co. et al., we promulgated certain car service rules, from 1 to 9, inclusive, effective January 1, 1907, which we have been often informed have been of great service to the shippers of the State. Before these rules legal notice of arrival, with initials, charges, weights and number of cars, was not required; the bunching of cars, the fault of either transportation or switching, and weather conditions made no difference so far as the rules provided, in demurrage charges, and any concession from car service charges was the high and absolute prerogative of the car service manager, and affidavit could not be made removing the decision from him, and investing it in the railroad official with whom the shipper came in daily contact. In this case also the average or reciprocal plan was presented, and as to this we declared, First Annual Report, page 124:

"As to reciprocal demurrage, we have every reason to believe from the information at hand that the General Assembly intended to give the Commission power to establish reciprocal rules to prevent discrimination and delay. But the terms of the act in the light of the rules of statutory construction, render it so doubtful whether the Commission can make such rules that we feel it is best to relegate this matter to the General Assembly, now about to convene. If the representatives of the people of the State desire to pass such an act it would become effective long before an appeal from the decision of the Railroad Commission could be decided."

Before the last General Assembly convened we were informed that an effort would be made by influential shippers to provide for reciprocal or average demurrage in the State of Indiana. And as a matter of fact, House Bill 234, commonly known as the "Shippers' Bill," provided in section 5 partly as follows:

"If any car set for loading shall be properly loaded and proper shipping directions furnished, and the car thereby released for moving twenty-four hours or more before the free time expires, the carrier shall pay to the shipper one dollar (\$1) on account of such release. If any car set for unloading shall be unloaded and thereby released for moving twenty-four hours or more before the free time expires, the carrier shall pay the consignee one dollar (\$1) on account of such release."

"Cash settlements of any charges arising under this service shall be made at the end of each calendar month."

"Any carrier, shipper or consignee or any agent or employe of any carrier, shipper or consignee who shall violate any provision of this section shall be guilty of a misdemeanor and on conviction fined in any sum not less than twenty-five dollars nor more than fifty dollars."

During the course of legislation the above provisions were stricken out of the "Shippers' Bill" by the General Assembly. And, therefore, the Assembly declined to provide an average system of demurrage quite similar to the plan proposed in the petition in this case. With this fact before us, and with only the warrant of a general doubtful enumeration of duties and powers followed by specific provision containing no affirmative grant or power of such regulation, would we not be asserting power, if we endeavored to do what was actually presented to the Assembly and denied by that body from whom all our powers are derived?

Referring again to what we said above, that no proper and legal conclusion can be reached without considering together all acts of the Assembly on the same subject, we find that even although the General Assembly had stricken out from the proposed bill the average plan claimed in the petition, it has expressed its will as to the limits of this kind of demurrage in this State under the sub-titles of "Reciprocal Demurrage, Freight Cars," in section 8, and "Reciprocal Demurrage, Coal Cars," in section 10 of the Shippers' Bill, pp. 438 and 439, Acts of 1907. Is there left for us any avenue of escape from the conclusion that the Assembly has made such provisions on this subject as it intended to obtain in this State, and having done so, has not confided to the Railroad Commission the power to enlarge its provisions in this regard?

It will be recalled that when this case came on for hearing the Commission presumed to make an order requiring the parties to meet and to make, if possible, a settlement of this matter. In making this order the commissioner in charge stated that average rules were in force in a great many states, particularly in the states of Michigan and Ohio, adjoining this State. We know, too, that some form of reciprocal or average demurrage existed in the states of Alabama, Arkansas, Colorado, Florida, Georgia, Kansas, Louisiana, Michigan, Missouri, Mississippi, New Jersey, New York, North Carolina, North Dakota, Oregon, South Carolina, South Dakota, Texas, Vermont and Virginia. It was distinctly intimated that the Commission desired conciliatory effort and action between the parties with the hope that an agreement could be reached by which some form of average demurrage would be adopted to the satisfaction of both parties; so that on the one side this right so persistently claimed by the shippers might be granted by the carriers, there being no authority in the Commission to order it, and on the other side, it might be granted upon such condition as would not retard the movement of cars. We thought that the period of temporary depression in business would be a good time to try the effect of such rule and we purposely gave to the parties to this cause a considerable space of time within which we hoped they might get together and come to an agreement. Failing altogether in our effort in this regard, there is nothing left for us but to take the law as the General Assembly has enacted it and to keep within the limits of the authority delegated to us.

An order dismissing the petition will accordingly be entered.

February 20th, 1908.

This cause was taken up and considered by the Commission, and it is ordered that the same be dismissed.

No. 206. Pittsburgh, Cincinnati, Chicago & St. Louis Railway crossing Lake Erie & Western Railroad.

Since our last report the order previously issued in the above cause was modified, dispensing with distant signals and requiring markers indicating location of derail. Subsequently the plant was inspected and approved by the Commission.

No. 207. H. E. Jennings, doing business as Central States Cooper-age Company, v. Baltimore & Ohio Southwestern Railroad Company et al.

Since our last report this cause has been heard by the Commission and an order entered, dismissing the petition. The opinion delivered by Commissioner McAdams, was as follows:

The petitioner charges in his petition that for fourteen years he has been and is now engaged in the business of manufacturing slack barrel coiled wooden hoops, and that his factory is located on the rails of the respondent, the Pittsburgh, Cincinnati, Chicago & St. Louis Railway Company, at New Castle, in Henry County, in this State. The petitioner charges that the hoops were made from what is commonly called "hoop timber," being elm slabs from 5 to 18 feet in length, and 1½ inches thick, and the width of the log from which the same are cut. That the slabs are usually cut in the rough, with the bark of the tree unremoved from the log, and contains all the knots, holes and other defects of the log from which cut. That the slabs are not planed or dressed, and are of no value except for the manufacture of hoops, and that the slabs do not resemble any other lumber or timber. That such slabs are the raw materials from which such hoops are manufactured, and that he procures the same over the lines of the following named railroads in this State, which are made respondents in such petition:

Baltimore & Ohio Southwestern Railroad Company;
 Central Indiana Railway Company;
 Chicago, Cincinnati & Louisville Railroad Company;
 Chicago, Indianapolis & Louisville Railway Company;
 Chicago, Indiana & Eastern Railway Company;
 Cincinnati, Hamilton & Dayton Railway Company;
 Cleveland, Cincinnati, Chicago & St. Louis Railway Company;
 Grand Rapids & Indiana Railway Company;
 Indianapolis Southern Railroad Company;
 Lake Erie & Western Railroad Company;
 Lake Shore & Michigan Southern Railway Company;
 Pittsburgh, Cincinnati, Chicago & St. Louis Railway Company;
 Southern Indiana Railway Company;
 Toledo, St. Louis & Western Railroad Company;
 Vandalia Railroad Company,
 Wabash Railroad Company.

The petitioner further charges that the respondents, since September 1, 1906, have been charging him for the shipment of such slabs from points of

origin in this State on their respective lines to New Castle, Indiana, the sixth class, or lumber, rate according to the official classification and rates in force on the line of the respondents in this State since that time. It is further charged that for fourteen years prior to such date the respondents had transported such materials on commodity rates, which were from 40 to 60 per cent. lower than the sixth class rates now applied by the respondents. That such former rates were reasonable, remunerative and fair to the respondents, and that the rates now applied are unreasonable, unjust, excessive and exorbitant, and are 40 per cent. higher than such rates fairly, reasonably and lawfully should be.

The petitioner charges further that the increased freight charges so add to his expenses of operation that he can no longer operate his plant at a reasonable profit, and that unless such rates are reduced he will be compelled to close his plant, resulting in great loss to himself and depriving his employes of steady and remunerative employment.

The respondents each and all deny these allegations of the petition, and the questions therefore presented by the issue thus formed, and to which the inquiry at the hearing was directed, are:

1. Is the product from which petitioner manufactures hoops improperly classified as lumber, and if not, are the lumber, or sixth class, rates applied to its movement excessive?
2. To what extent may or can the Commission go in establishing rates for the purpose of maintaining an industry in a prosperous condition?

Official Classification No. 31, p. 110, item 9, lumber, effective January 1, 1908, includes all lumber not otherwise specified in boards or pieces, and places it in the sixth class in carloads. The product used by the petitioner is variously designated in the evidence and in the tariffs examined as hoop timber, hoop lumber, hoop material, flitches, flitched-up lumber, elm lumber, cooperage stock, hoop belts and possibly other names. The fact that there are so many designations or trade names for the materials has been the cause for the dispute which has produced this inquiry. The evidence shows that the hoop timber, or whatever may be the correct name for the material, is taken to the mills on respondents' lines in the log and is there cut into hoops $1\frac{1}{2}$ inches thick and from $5\frac{1}{2}$ to 18 feet long and the width of the log. Before cutting, one and sometimes two sides of the log are squared by removing a slab or slabs. About one-half of the materials are edged at the mill; that is, the bark and sap are removed by the saw before loading for shipment to petitioner. Otherwise slabs contain all the sap, the bark and imperfections of the log. There is a great waste in the cutting, the general average being that 9 pounds of log will produce but $5\frac{1}{2}$ pounds of lumber. In cutting the mill man generally leaves a few inches uncut at the end of the log so that the whole may be more easily handled. These uncut parts break off readily as the boards or slabs are handled. The material is not planed or otherwise dressed, and is used solely for the manufacture of hoops. In the judgment of the Commission there is no material distinction between this product and other rough and undressed lumber which should differentiate it in determining its proper classification. It is true that it is of comparatively small value as compared with other more valuable woods, but in the judgment of the Commission rough,

unfinished woods of value in the form of rough, undressed lumber should not take a higher class on account of the value. We recently held in "Inquiry concerning rates on and classification of logs, and matters connected therewith," report of 1907, p. 58, that it was improper to exclude cherry and walnut logs, being woods of value, from the log scale rates and to carry such logs at higher rates, and the carriers, subject to that proceeding, have discontinued the practice. No transportation reason was assigned and none has suggested itself to the Commission why the petitioner's material should not fall in the class of lumber generally unless removed therefrom by exceptions to the classification, and we so hold.

It is claimed that the sawed materials shipped by petitioner are raw materials, from which his finished product is manufactured, and that for such reason the materials should take a lower rate. In a sense the fact is as contended, but the conclusion does not follow. The logs from the forest to the mill are carried on the log scale, which is generally 33 1-3 per cent. less than the lumber rate, and in the case above cited we held that the so-called milling in transit rate on logs should not be so applied as to compel the outbound lumber to move on the line delivering the logs, but that the log rate should be applied in the first instance on account of the nature of the shipment, it being crude material, and the loss incident to its manufacture. To now hold that the lumber is raw material would be applying the doctrine twice to the same commodity, and it could as well be extended to the shipment of the hoops because they are to be used in the manufacture of kegs and barrels. We do not think that rough lumber of any kind which is used in the trades, such as the manufacture of furniture, sewing machines, wooden ware, and other wooden articles of commerce, can be classed as raw materials in the sense that on that account it should be carried at preferential rates.

Prior to June 9, 1907, there was no law in this State requiring railroads to issue or publish tariffs, or file the same with anyone if published, when the traffic was moved between points in this State. Consequently we have not been able to obtain a complete file of rates in effect during the time covered by petition and the evidence adduced at the hearing. It appears quite clearly that the principal shipments of the material in question to petitioner in recent years have been over the Big Four, L. E. & W. and Pan Handle lines. As to the rates on these lines, it appears that the Pan Handle, prior to January 1, 1900, carried hoop timber in its log tariffs; that is, log tariffs were then reissued and hoop timber omitted, and from thenceforward to this time this material, under the tariffs of that company since in force, should have been carried as lumber and on the sixth class. On account of the erroneous interpretation of this company's local agent at various points on the line, this material was billed to New Castle at the log rate, but that rate was not applied to shipments to other points. Under this misapplication of the tariff many of the shipments moved which are now brought forward by petitioner as evidence in this proceeding. After the company became aware of this application of the tariffs instructions were issued forbidding it, and since then the traffic has moved as lumber and on the sixth class. The Big Four and the L. E. & W. have always carried this product at lumber, or sixth class, rates until in June and July, 1905, when it was learned what the Pan Handle was

doing, as above stated; that is, carrying this product at the log rate, whereupon these companies issued commodity rates carrying the log scale for the purpose of meeting the rates practiced by the Pan Handle. The rates so issued were not applied at other like points on their lines, but solely to New Castle. These rates continued until the Pan Handle altered its practice, whereupon the Big Four withdrew its commodity rates on August 15, 1906, and the Lake Erie & Western withdrew its commodity rates on January 24, 1907, and since then the traffic has moved on these lines on the class basis. Many of the respondents have never had other than class rates in effect to New Castle upon which this traffic could have moved. The Vandalia and G. R. & I. for a while had commodity rates and proportional rates, but they returned to the class basis about the same time as the other lines.

It may be suggested as a general proposition that in all intrastate shipments the lumber traffic now moves on sixth class. The exceptions are generally explained by the fact that the lines which carry commodity rates are compelled so to do to meet the short-line class rates of other companies or not participate in the traffic. The rates on lumber throughout the State are not uniform, but vary in the same degree with class rates on the various lines and systems throughout the State. It cannot be said that there is any serious complaint against the class basis for the movement of lumber in carloads. The movement is extensive, important and general, and any disturbance of the rates applied to any point in the State where there is a considerable movement would result in a widespread and constantly increasing disturbance of rate conditions on this article throughout the State. Such a result should not be produced without an opportunity for all the carriers to be first heard, and then only after a full and thorough examination and investigation of the question of the reasonableness of present rates. There was no such inquiry in this case. The contention here was for a return to the commodity rates in effect on only two of the respondent lines parties to this proceeding, and then only for a limited time. The conditions are not now opportune for such an inquiry as should be held before entering upon a revision of the lumber rates, and we conclude, for the reasons stated, that the lumber rates now applied should not be disturbed in this proceeding.

The effect of present rates on the business of petitioner and our powers and duties with reference thereto invite our attention, and as an introduction to that subject we submit the following facts appearing in the evidence:

OPERATING STATISTICS.

(Only 11 months in 1907.)

<i>Item.</i>	<i>1906.</i>	<i>1907.</i>
Total hoops manufactured.....	9,459,323	9,676,512
Feet of timber used.....	2,619,612	2,173,756
Cost of timber used (including freight).....	\$46,798 00	\$53,480 00
Cost of labor	17,760 00	16,454 00
Average hoops per M feet lumber.....	3,610	4,451
Average cost timber on yard per M feet.....	\$17 86	\$24 69
Average cost labor per M feet.....	6 78	7 57

<i>Item.</i>	<i>1906.</i>	<i>1907.</i>
Freight paid on timber.....	4,274 25	7,954 93
Average cost per car hoop lumber.....	25 79	39 50
Net receipts for hoops sold.....	68,542 90	70,746 61
Expenses for labor and materials only.....	64,559 10	69,935 50
Gain per year (ex. selling, taxes and insurance not counted)	3,983 80	811 11
Average price hoops per M.....	7 24	7 31
Lumber received, all lines (cars)	49	54
Logs received, all lines (cars).....	41	46

The results shown by these statistics are not encouraging matters for the contemplation of petitioner when he considers his investment of \$40,000 in plant and equipment, to say nothing of taxes, insurance and expenses of selling the product, none of which are taken into consideration in the calculations. It is claimed in the petition, was restated at the hearing and is advanced in argument that the increased freight rates are responsible for the different results obtained from the two years' operations; therefore we shall examine this data to determine whether this contention is correct, or whether other causes also contributed to these results.

An exact comparison of the operations of 1907 with the operations of 1906 cannot be made without great detailed calculation not necessary for present purposes. This is true for the reason that petitioner used 445.8 thousand feet less timber in the eleven months of 1907 than he used during the year of 1906, and on account of the difference in the efficiency of materials used and labor employed in the latter year; however, the following conclusions drawn from the data given fairly illustrate conditions:

OPERATIONS 1907.

(Basis timber used.)

Dr.

To increased cost of materials, including freight, over cost like amount materials in 1906, being \$6.83 per M feet for 2,173.7 M feet used:	\$14,864 37
To increased cost labor over 1906 per M feet of materials used, 79 cents, total for 2,173.7 M feet	1,717 22
Total for 11 months.....	\$16,563 59
Add one-eleventh to complete year.....	1,505 78
Total comparative losses over 1906.....	\$18,069 37

OPERATIONS 1907.

(Basis timber used.)

Cr.

By increased efficiency of timber used in 1907 over 1906, being 841 hoops per M feet used, or 1,828.081 for 2,173.7 M feet, at \$7.31 per M.....	\$13,362 68
--	-------------

Or.

By increased selling price hoops per M in 1907 over 1906, being 7 cents on balance 7,848.5 M.....	549 39
Total for 11 months.....	\$13,912 07
Add one-eleventh to complete year.....	1,264 73
Total comparative gains over 1906.....	\$15,176 80
By excess losses over gains from operation.....	2,892 57
	<u>\$18,069 37</u>

It will be observed from the above data and analysis that operating conditions in 1907 were greatly different from those of 1906. For eleven months in 1907 the freight alone exceeded the like expenses for the year 1906 by \$3,680.58. For the same period the cost of timber used exceeded the cost of a like amount used in 1906 by \$11,165.79, and the cost of labor for the same period for handling a like amount of materials increased \$1,717.22 over the cost of such labor in 1906. The cost of materials, with freight added, exceeded the cost of such materials in 1906 by more than 38 per cent. However, we see by the credit side of this analysis that the greater efficiency of the materials procured and labor employed resulted in an increased income on account of such efficiency in the sum of \$13,362.68, or \$479.67 in excess of the increased cost of labor and the increased cost of materials, less freight.

This is a forceful illustration of one of the controlling conditions in the process of manufacturing. The result is controlled absolutely by the cost of materials and labor on the debit side of the account, and their efficiency and the efficiency of the labor employed on the credit side of the account. The final result obtained by the analysis is \$280.12 less than the difference between the profits for the two years, and this is accounted for, as suggested by the difference in the amount of materials used and their efficiency.

There is no explanation in the evidence as to the reason for the increased cost of materials other than that the supply constantly grows less and the source of supply is constantly moving further and further away from the factory, causing increased freight charges. It appears from the evidence that the petitioner each year used more cars of logs than cars of lumber. He has a mill where he can cut the logs. When the supply of timber was greater in the vicinity he operated the mill; now the supply of logs is so limited that sufficient quantities cannot be procured to keep the mill going. This is true for the reason that the logs are cut by mills located in the vicinity of the stumpage. The market for hoops is one of constant and tenacious competition. The business is conducted on close margins. The mills located in the vicinity of timber supply where they can handle logs at their own mills have an advantage in the cost of production. Eventually mills long distances removed from the timber supply must yield the market to those more favorably located or remove to the source of supply. That condition has not yet arrived in this State, but is approaching. As many of the views here expressed were suggested by

the hearing, the Commission since then, on its own account and at the cost of considerable time and labor, has investigated throughout a large portion of the State the conditions obtaining as to the manner of operation of like plants, and the success attending operations. The almost universal judgment of operators is that where there is a saw mill in connection with the hoop plant, and the logs are hauled in and cut or shipped for short distances, that the business may be and is conducted with reasonable profit, and that it cannot be so conducted where the logs must be shipped long distances, or where there is no mill and the lumber is purchased and shipped long distances. One mill in the same general locality as petitioner has recently retired from the hoop business on account of the scarcity of material. The petitioner ships his materials from 100 to 150 miles.

These suggestions lead us to the conclusions that the petitioner's business is affected largely by his location and manner of operation. He should use more logs if he remains where he is, and if he continues long in the business he will be compelled to locate nearer the source of his material supply. These are conditions beyond the authority and power of the Commission to correct. It cannot change the geography of the country or replace in the vicinity of the factory by rate regulation a supply of materials which consumption has there exhausted.

This principle has long been recognized in the transportation law, and as pertinent thereto we submit the following quotation from *Squire & Company v. Michigan Central R. R.*, 3d I. C. C., 522:

"Another consideration which was urged was that there are commercial or rather public considerations, outside of those facts which go to determine a fair rate in itself for the carrier, which should control in making the relative rates, namely that there is a large amount of capital invested by the complainants and other eastern slaughterers which does now and has for many years given employment to a vast number of men in what has been regarded as a stable business, and in it they are practically fixtures in a business point of view. That those men should be disturbed in their calling by changed conditions in the business in which they are engaged, or arising out of the growth and development of the country, is a misfortune and very likely may result in hardship. But in one of the first cases brought before the Commission for adjudication (In *Re Iowa Barb-Steel Wire Company*, 1 Inters. Com. Rep. 605, 1 I. C. C. Rep. 17) the same question was raised, and it was there held that the Commission had not been given a general dispensing power to relieve hardships of this sort. It has also been repeatedly stated that it is not the province of the Commission, by a fixing of rates, to overcome the advantages which one producer or dealer may derive from his geographical location."

The doctrine above announced was reaffirmed in an opinion by Knapp, Chairman, on March 16, 1908, in the case of *S. S. Quimby et al. v. the Maine Central Railroad*, in which the chairman used the following language: "It is evident that the disadvantage under which complainants labor is primarily due to their unfavorable location, and it has been repeatedly held that it is not the province of the Commission to overcome disadvantages of this nature by adjustment of transportation charges."

Other like industries in the State never enjoyed the favorable rates recently extended to the petitioner, and which he now seeks to have restored. There has been no change in conditions at their locations, yet they generally report fair profits. Their manner of operation is essentially different. They do not complain of freight rates. Many of them are nearer the timber supply.

The Commission has given this cause long consideration, careful examination and re-examination. It has pursued the investigation far beyond the point where it was dropped by petitioner and the respondents. And instead of the impressions developed at the hearing being changed or modified, the additional investigation and re-examination have forced the conclusion upon the Commission that the petition in this cause will have to be dismissed, and an order will be entered accordingly.

May 26, 1908.

This cause having been heretofore heard and taken under advisement, and the Commission, after considering the briefs and being fully advised, now files its findings and conclusions herein as follows: (Insert.)

Therefore, it is now ordered that the petition in this cause be and the same is now dismissed.

No. 209. Cincinnati, Hamilton & Dayton Railway Company et al.
v. Southern Indiana Railway Company, interlocker at Dana,
Indiana.

Since our last report plans were filed by the Southern Indiana Railway and disapproved by the Commission. New plans were thereupon submitted and approved. The plant was ordered constructed and its construction, maintenance and operation were awarded to the Southern Indiana Railway, at the latter's expense.

No. 211. Southern Indiana Railway Company v. Baltimore & Ohio
Southwestern Railroad Company.

Since our last report the petition in the above entitled cause was dismissed on application of the petitioner.

No. 213. Jules P. Bessire v. Cleveland, Cincinnati, Chicago & St.
Louis Railway Company et al.

Since our last report the above cause was heard by the Commission and a final order entered, denying the prayer of the petition to change the classification of petitioner's paste products. Report of Commissioner Dowling and the order entered therein are as follows:

This was a petition filed by Jules P. Bessire & Company against the C., C., C. & St. L. Ry. Company and other carriers, seeking a change in the classification of their paste products, manufactured by the petitioners, and which are now in the third class.

Upon the hearing of this cause it appeared that one of these products is a wet paste, composed of 71.0 water and 31.10 low grade flour, with some chemicals added as preservatives. The total cost of production is \$1.10 per package of 235 pounds, and it sells for \$1.50 per package. It is shipped in new barrels, into which it has been poured while soft, and the same are made tight to prevent leakage. The manufacturer testified that the paste requires no special care in handling during shipment, but may with safety be placed near oil or any other article. It can be exposed to the air for thirty days without spoiling; but it was shown that if it froze it "would do it no good," though it would not thereby be ruined. The testimony indicated that there were instructions upon the barrels directing that the latter should be kept in a dry, cool place; but one of the petitioners stated that these directions were for the benefit of the customer and not for the railroad.

The other product is a dry paste designated as "stick stay." It is made of dry corn flour, mixed with chemicals. It costs \$6.00 per barrel, or 3 cents per pound, and sells for \$8.00 per barrel, or 4 cents per pound. It is shipped in stout linen bags, ranging from 5 to 10 pounds, and in barrels of 200 pounds. This product is without competition in western territory.

In general, the testimony tended to show that these pastes are used in decorative works and by carriage factories and canning factories and generally as adhesives. Unless they can be sold as cheaply as paperhangers and others can make flour paste for themselves, the market is restricted. The present freight rate has this effect. Petitioners could secure the paperhangers' business if the rates were lower. Their purpose in instituting this proceeding was stated by one of them to do the development of new business and shipment of more goods.

During the first six months of 1908 petitioners' shipments within the State of Indiana fell off some 48,000 pounds from the corresponding months of 1907; and for the same period their interstate shipments declined about 98,000 pounds from their interstate trade for the first half of 1907. Nevertheless, the business was operated at a profit, though it was less profitable than in 1907. During 1907 and 1908 the petitioners shipped in competition with manufacturers of paste located at Louisville, St. Louis, Chicago, Dayton, Cincinnati and Detroit; though no competition seems to have arisen from any similar establishment located in Indiana.

Petitioners' shipments range from 1 to 10 barrels and the largest consist of 25 barrels.

Upon behalf of the respondents it was stated that the Official Classification Committee declined to reduce the class which these pastes were assigned for the reasons, (1) that the same were brought in line with laundry paste, which takes the third class; (2) the wet paste is liable to souring and freezing and so requires greater care in shipment. The committee deprecated any comparison between these products and flour, glue or milk, and because of differences in their respective character and use.

By reference to the Official Classification it will be seen that flour paste in package, L. C. L. takes the third class, as do also carpet-cleaning paste and laundry paste in wood; while sizing in kegs or barrels takes a rate 2 per cent. less than third class. In the western classification flour

paste, wall-cleaning paste and size take the same class, viz., fourth, and in Southern Classification flour paste and sizing take sixth class. In Illinois Classification flour paste takes fourth class, in L. C. L. quantities, carpet-cleaning paste is classed as fifth, sizing as fourth and laundry paste as third.

These comparisons are not instructive because of the recognized differences in the schemes of classification adopted in the territories indicated, and for the reason that the articles compared are only remotely analogous to the petitioners' products. So far as the net paste is concerned, there is no glaring inequality in classifying it with other pastes, such as laundry or carpet-cleaning compounds. It is impossible to rate articles according to minute differences in character; and the most that can be reasonably demanded of carriers is that their classifications show no clear injustice. The net paste manufactured by the petitioners might fairly be classed lower than third class; it is easily handled, does not seem to be especially liable to injury from exposure to heat or cold; is of heavy weight and low value; and is used for a purpose analogous to that of sizing. Its basis is flour, which takes a fifth or sixth class rating. The trade conditions are such that unless the classification is low the patronage of paperhangers is lost.

On the other hand, the quantity carried by the railroads is comparatively small; there is some element of risk attaching by reason of the fact that freezing will do it no good, and dampness and heat will necessarily affect it. Other pastes are given the third class; and flour, which receives a low classification, does so because of its enormous consumption and its character as a necessary of life.

In the light of these considerations the Commission cannot say the present classification of either the wet or dry paste is unreasonable. Were we making an original rating we might feel justified in placing them below third class; but the carrier possesses a discretion in the matter; for, as said in *Planters' Compress Co. v. C., C., & St. L. Ry.*, 11 I. C. C. Rep. 382, 409: "It seems plain that a distinction should be drawn between the legal obligation of carriers and the discretion which they may rightfully exercise. We do not doubt that it would be lawful for these defendants and other carriers to establish carload and less than carload rates on cotton, with a reasonable difference between the two rates and a reasonable minimum which would secure to shippers the lower carload rates; but it does not follow that they are bound to do so, much less that they can be required to establish a differential based upon an unusual carload minimum."

In a leading text it is said: "In the discussion of classification it is to be noticed that the question is not what classification the judges would make if they were acting as a committee to frame a schedule; the question is rather whether the classification adopted by the carrier can be justified. In the cases in which classification is discussed, therefore, the court has to determine not whether it could imagine a better classification, but whether it should overthrow the adopted classification as clearly unreasonable." (Beale and Wyman on R. R. Regulation, section 566.)

Our conclusion therefore is, that there are not such elements of flagrant inequality in the existing classification of these articles as call for the interference of the Commission; especially as it appears that the

present freight rate does not prevent the petitioners from operating their business at a profit, and that its main adverse effect is upon the trade with paperhangers, who constitute but one of several classes of petitioners' patrons.

The petition should be overruled, and an order to that effect *will accordingly be entered.*

ORDER.

Come now the petitioners and the respondents by their respective counsel, and the matter coming on for hearing, evidence being heard and arguments made therein, the Commission now takes the matter under advisement.

And the Commission being fully advised, now finds that the classification of the petitioners' paste products as third class is not unjust or unreasonable and the same should not at this time be ordered changed.

The petition is accordingly dismissed.

No. 215. The Wabash Sand and Gravel Company, petitioners, v.
The Southern Indiana Railway Company, respondent.

The Wabash Sand and Gravel Company of Terre Haute, Indiana, filed a petition with the Railroad Commission of Indiana, alleging that the respondent company had caused to be published a switching tariff of three dollars (\$3) per car for switching cars from points on respondent's rails from the Wabash river on the south of Terre Haute to the Wabash river on the north of Terre Haute to their connections with the Cleveland, Cincinnati, Chicago & St. Louis Railway, Vandalia Railroad, Chicago & Eastern Illinois Railroad and Evansville & Terre Haute Traction line; that the Southern Indiana Railway Company had also caused to be published a tariff of fifteen cents (15c) per net ton on all shipments made from petitioner's gravel pit to above mentioned connections, which rate the petitioners alleged was arbitrary, unjust and discriminating. The petitioners further alleged that under the tariff exacted by the respondent, petitioners had been forced to fill part of its contract at a loss; that by reason of said discrimination petitioner had lost business and had been forced to purchase between 500 and 1,000 cars of gravel per year from other places to fill its orders. Petitioners asked that the Railroad Commission of Indiana compel the respondent company to apply the published and usual switching charge of three dollars (\$3) per car on shipments made from petitioner's gravel pit to all railroad connections at Terre Haute, Indiana, and for all proper and equitable relief. This case was set for hearing at the rooms of the Commission January 21, 1908, at 10 o'clock a. m., the petitioner and respondent being presented both in person and by counsel. It was concluded to try the Commis-

sion's usual plan of adjustment without a formal hearing, and a conference was held between the Chairman of the Commission and the parties in interest, which resulted in an amicable adjustment of the matter, the respondent granting a rate of ten cents (10c) per net ton from Wabash Sand and Gravel Company's pit to connections in Terre Haute, Indiana, when destined to points beyond on connecting lines.

No. 216. Ex parte Chicago, Lake Shore & Eastern Railway Company.

Since our last report the final order issued in the above cause was modified by requiring the relocation of the petitioner's telegraph office at Pine and a change of its rules, by providing that train order semaphores shall stand normally at danger.

No. 217. Ex parte, Elgin, Joliet & Eastern Railway Company.

Since our last report the final order entered in the above cause has been modified by requiring train order semaphores to stand normally at danger.

No. 218. Chicago, Indianapolis & Louisville Railway Company, appeal from order of Board of Trustees of Roachdale, Indiana.

Since our last report the above cause has been considered, the appeal sustained and the town ordinance held invalid. Subsequently representatives of the railroad and of the town met with the Commission and agreed upon the installation of certain signals. These being approved by the Commission, the cause was dismissed. The opinion and order entered herein were as follows:

OPINION AND ORDER OF COMMISSION.

The town of Roachdale, Indiana, through its town board, having passed an ordinance requiring the Chicago, Indianapolis & Louisville Railway Company to maintain gates or warning signals at certain street crossings in said town, the Chicago, Indianapolis & Louisville Railway Company appealed from said ordinance, assigning as grounds for such appeal, (1) that conditions did not justify the protection required by the ordinance; (2) that the ordinance was so uncertain and indefinite as to be void; (3) that the ordinance was passed by said board of town trustees without authority of law, and in its passage the said board exceeded the powers and authority conferred upon it by law in such matters; (4) that an act of the General Assembly of the State of Indiana, approved March 1, 1907, clause 14, which authorizes town boards to require bells or watchmen in certain cases, violates article 14 of the Constitution of the United States.

This case being assigned to the chairman of the Commission for hearing, the same was heard at the town of Roachdale on January 4, 1908, and report made to the Commission.

The Commission, after considering the grounds of appeal, overrules and disapproves said ordinance for the reason that the town board of Roachdale exceeded its authority in the passage of the same by fixing a penalty in excess of the penalty provided for in the statute.

It is therefore ordered that the appeal be sustained and the ordinance overruled.

No. 220. Louisville & Northern Railway and Lighting crossing Baltimore & Ohio Southwestern Railroad at Watson, Indiana.

Application for approval of an interlocking device at Watson, Indiana. The plans submitted by the interested roads were referred to the Commission's consulting engineer, and upon his report coming in the plans were approved.

No. 221. Cleveland, Cincinnati, Chicago & St. Louis Railway crossing the Chicago & Eastern Illinois Railway at Coal Bluff, Indiana.

Application for approval of an interlocker at Coal Bluff. Plans were submitted by the interested roads, referred to the Commission's consulting engineer and the plant was disapproved by the Commission. Subsequently this order was set aside, the matter reconsidered and the plant approved, subject to conditions stated in the final order.

No. 222. Elgin, Joliet & Eastern Railway crossing Baltimore & Ohio Railroad at McCool, Indiana.

Application for approval of interlocker at McCool. Plans filed by the interested roads were referred to the Commission's consulting engineer, and upon his report coming in the plans were approved.

No. 223. Cincinnati, Bluffton & Chicago Railroad Company v. Ft. Wayne, Cincinnati & Louisville Railroad Company and the Lake Erie & Western Railroad Company.

Application for approval of an interlocker. The petition and plans were filed and referred to the Commission's consulting engineer.

No. 224. Cincinnati, Bluffton & Chicago Railroad Company v. Toledo, St. Louis & Western Railway Company.

Petition for approval of an interlocker. Petition and plans filed and referred to the Commission's consulting engineer.

No. 225. Ft. Wayne & Wabash Valley Traction crossing Wabash Railroad Company east of La Gro, Indiana.

Application for approval of interlocker near La Gro, Indiana. Plans were filed and referred to the Commission's Consulting engineer. Upon his report being submitted the plans were conditionally approved. The plant has since been completed, inspected and approved, and the roads permitted to run the crossing without stopping, according to law, from and after July 29, 1908.

No. 226. The Town of Hagerstown v. Pittsburgh, Cincinnati, Chicago & St. Louis Railway Company.

Petition filed by the town of Hagerstown to secure better passenger service. The matter has been adjusted, the railroad company agreeing to stop its west bound train No. 19 at Hagerstown. The cause is to be dismissed when the terms of the agreement have been complied with.

No. 227. Lafayette Gravel and Concrete Company v. Cincinnati, Indianapolis & Louisville Railway Company, and seven other railroads.

Petition filed by the Lafayette Gravel and Concrete Company to secure the establishment of reasonable rates on gravel and concrete products from Lafayette to points on the respondent railroads. The cause having been heard, an order establishing rates was issued, which will be found, *infra*, at page 60. This order was subsequently modified by permitting the grouping of points within the Lafayette gravel district within a radius of not over five miles from the principal freight stations of the respective roads in the city of Lafayette. This modification will be found *infra*, at page 62.

The opinion in this cause was delivered by McAdams, Commissioner, and was as follows:

These cases are so very much related that they were heard at the same time and will be disposed of in one finding.

The first cause involves rates on gravel and concrete products from Lafayette, Indiana, to Frankfort, Indiana, via the Monon to Linden, and thence over the Clover Leaf to Frankfort.

The second cause involved rates on gravel and concrete products from Lafayette, Indiana, over the Monon to Crawfordsville Junction and thence over the Vandalia to Flora and Bringham.

The third cause involves rates on gravel and concrete products from Lafayette, Indiana, to all local points on the Monon, Big Four, Lake Erie & Western and Wabash railroads, and to points on the lines of the Erie,

Nickel Plate, Pan Handle and C., C. & L., which are reached through junctions with the other lines leading from Lafayette.

There has been no evidence which would justify the Commission in considering the rates involved in these cases other than the rates on gravel. It also appeared at the hearing that the petitioner had not consulted with the carriers as to rates on building blocks and concrete drain tile before instituting this proceeding. While it is not necessary to do so, however, we think the carriers should be given an opportunity to establish rates before instituting proceedings before the Commission to require the establishment of rates. Therefore, that part of these petitions which involves rates on concrete products will be held for further consideration, if occasion shall require, after the carriers have been given an opportunity to satisfy the petitioner's demands.

Since the filing of the first two cases the Commission concluded an inquiry, under section 7 of the amended act creating the Commission, concerning rates on road and street materials, and recommended to the carriers of the State the establishment of a scale of maximum local and joint rates on such materials. (Annual Report of 1907, p. 71.) The carriers did not observe the suggestions of the Commission. After several conferences with the carriers' representatives, resulting in a failure to agree upon any adjustment of existing differences as to such rates, the Commission has taken up informally the separate complaints of shippers desiring such rates, and after several weeks' effort we have succeeded in obtaining but a few quotations, and some of these concern satisfactory rates already in effect, the others being rates that will not move the traffic. This effort has been made at the request of the carriers, they promising to act quickly and put in rates that will move these materials. The result of these efforts to accomplish something along the lines suggested again forcibly illustrates the importance of having a maximum scale of rates to control this traffic. Therefore, in these cases the Commission has departed from its recommendations. Our original action was a local scale of 60 per cent. of the C. F. A. sand and gravel scale and a joint scale of 20 per cent. in excess of the local scale for distances of 50 miles or less. The schedule now ordered in these cases is constructed upon a basis approximating 75 per cent. of the C. F. A. sand and gravel scale for distances of 100 miles and less, and a less percentage for distances exceeding 100 miles, and the joint scale is 140 per centum of the local scale so ordered, these rates to be applied to the movement of sand, gravel and crushed stone when used for the improvement or repair of county or township roads and to the movement of spalls, or quarry scrap, rough stone or cinders when used for filling purposes only on county or township roads. The order thus made, as to the local scale, is an increase of 25 per centum over the former proposal, and is yet 25 per centum below the C. F. A. scale. This order as to joint rates is an increase of more than 40 per cent. for the short distances over the former scale proposed by the Commission, and for the purposes intended there can be no reasonable excuse why the rates should not be applied where there are now no effective rates or where higher rates are now effective.

The local scale ordered exceeds some of the local rates out of Lafayette, especially on the Lake Erie & Western, and is less than the local rates on the Monon and Big Four, but is higher than rates for like dis-

tances from other points on the Big Four. The order in cause No. 227 will be based on these scales with the proviso that where present effective rates are lower than the scale such rates shall prevail and control the establishment of intermediate rates where none now exist.

In No. 165 the mileage is: Lafayette to Linden over the Monon, 22 miles; Linden to Frankfort on the Clover Leaf, 17 miles; total, 39 miles. On the scale now proposed by the Commission this joint rate should be 52.5 cents per ton for road building and repair. The petitioner's complaint in this cause is that the Clover Leaf has a local rate of 30 cents per ton from Silverwood to Frankfort, a distance of 57 miles, and claims that a joint rate should be upon the same basis Lafayette to Frankfort. This claim cannot be conceded or sustained. The direct route Lafayette to Frankfort is via the Lake Erie & Western, distance 24 miles, and the local scale proposed by the Commission would make this rate 35.5 per ton for road purposes; however, as that company now has effective rates on gravel from Lafayette to points beyond Frankfort of 35 cents per ton, it will probably publish rates to Frankfort of 30 cents per ton. Such a rate, plus the switching charge from the petitioner's pit to the Lake Erie & Western rails, will be a more favorable rate than via Linden; however, we will make an order as before indicated, although we can see but little policy in seeking a rate over two lines and an excessive mileage.

In No. 166 the petitioner seeks a rate via the Monon to Crawfordsville Junction, 28 miles, and thence via the Vandalia to Brighthurst and Flora, 44 miles; total, 72 miles. Under the scale now proposed by the Commission this rate would be 68 cents per ton for road purposes. If the scale now ordered by the Commission is adopted by all the carriers the proper routing, Lafayette to Flora and Brighthurst, would be via the Wabash and Clymers, total distance 44 miles, or via Frankfort and the Lake Erie & Western, distance 42 miles. The scale ordered by the Commission, if applied via Clymers, would be 57.5 cents per ton, and the same would apply via Frankfort, both being 10.5 cents per ton less than over the routing proposed in this cause. It would have been better policy and would have secured better results to have dismissed this cause and have made the Vandalia a party to cause No. 227; however, an order will be issued fixing a rate via Crawfordsville Junction, but it seems to be a useless thing to do in view of the shorter routing, but we have no other way of disposing of the application.

There has been no evidence as to proper rates on gravel for other than road building purposes. Therefore, the consideration of these cases, upon the subject of rates on gravel for commercial purposes or purposes other than road improvement and repair, will be postponed until such time as it may be necessary to consider that question.

Hunt, Chairman, not participating.

ORDER.

The evidence in this cause having been heard and the Commission having considered same, now determines said cause as follows:

It is therefore ordered by the Commission, That each of said respondents be and they are now required, in all cases where their present rates

exceed the same, to issue, publish and file with the Commission not later than March 30, 1908, local and joint rates on gravel in carload lots from Lafayette, Indiana, to all stations on their respective lines in Indiana, which said rates shall not be in excess of the following schedules:

Distance in Miles.		Local Rates.	Joint Rates.
5 miles and under	25	40
10 miles and over	5.....	30	43
15 miles and over	10.....	33.5	47
20 miles and over	15.....	33.5	47
25 miles and over	20.....	33.5	47
30 miles and over	25.....	37.5	52.5
35 miles and over	30.....	37.5	52.5
40 miles and over	35.....	37.5	52.5
45 miles and over	40.....	41	57.5
50 miles and over	45.....	41	57.5
60 miles and over	50.....	41	57.5
65 miles and over	60.....	48.5	68
70 miles and over	65.....	48.5	68
75 miles and over	70.....	48.5	68
80 miles and over	75.....	56	78
90 miles and over	80.....	56	78
100 miles and over	90.....	56	78
125 miles and over	100.....	62.5	87.5
150 miles and over	125.....	65	91
175 miles and over	150.....	70	98
200 miles and over	175.....	70	98
225 miles and over	200.....	75	1 05
250 miles and over	225.....	75	1 05

Rates in cents per net ton. Minimum carload in accordance with official classification or exceptions thereto as promulgated, published and filed by the line initiating shipments.

It is further ordered, That in all cases where present effective rates on gravel in carloads on the respondents' lines from Lafayette, Indiana, are less than the foregoing schedule prescribed by the Commission that then and in such cases such rates shall remain effective, and in all such cases the respondent having such lesser rates in effect on its line shall treat such present effective rates as the maximum in the establishment of other rates to points intermediate between Lafayette, Indiana, and the points where such lower rates are now effective, so as to comply with the laws of this State forbidding the charging of more for the short haul than the long haul over the same line in the same direction.

It is further ordered, That such respondents shall apply such tariffs to the movement of gravel in carloads in local and joint shipments from Lafayette, Indiana, to points on their respective lines for two years next after March 30, 1907, when the gravel so moved is for use in the construction, improvement or repair of county or township roads.

It is further ordered, That any tariff filed by the respondents in this cause in accordance with this order of the Commission shall become effective upon the same being filed without previous notice to the Commission.

It is further ordered, That any joint tariff filed by either of the respondents herein which shall initiate shipments from Lafayette, Indiana, destined to points on connecting lines of the parties hereto shall become effective upon being filed by the initiating carrier without concurrence therein by the participating line, such concurrence being controlled by the general authority filed with the Commission by such connecting lines authorizing the issuance of joint tariffs.

It is further ordered, That the secretary of the Commission shall send to each of the respondents in this cause a duly certified copy of this order of the Commission under his name as such secretary and attested by the seal of the Commission, and that the same be delivered to each of such respondents by depositing the same in the United States postoffice at Indianapolis, Indiana, in a duly stamped and addressed envelope directed to some officer or agent of each of said respondents resident in this State.

SUPPLEMENTAL ORDER.

This cause coming on for hearing upon the question whether the original order entered herein should be modified, the evidence being heard and the Commission, having considered the same, now determines as follows:

It is ordered by the Commission, That the following shall be added to the order originally made herein:

"The rates fixed by this order on gravel in carload lots from Lafayette, Indiana, to all stations on the respective lines of the respondents in Indiana shall not operate to prevent said railroads respectively from grouping, as to local rates, all points within the Lafayette gravel district situated within a radius of not to exceed five miles from the principal freight station in said city of Lafayette belonging to each of said railroads respectively so as to secure a substantial equality in local rates to all shippers of gravel located within the limits aforesaid."

It is further ordered, That the secretary of the Commission shall send to the petitioner and to each of the respondents in this cause a duly certified copy of this amendatory order under his name as such secretary, and asserted by the seal of the Commission, and that the same be delivered to said petitioner and to each of such respondents by depositing the same in the United States postoffice at Indianapolis, Indiana, in a duly stamped and addressed envelope directed to some office or agent of each of said parties resident in this State.

No. 228. Judson Harmon, receiver of the Cincinnati, Hamilton & Dayton Railway Company, v. The Town of Roachdale, Indiana.

On February 17, 1907, Judson Harmon, receiver of the Cincinnati, Hamilton & Dayton Railway Company, filed with the Commission his appeal from an ordinance of the Town Board of Trustees of Roachdale, Indiana, passed February 4, 1908, requiring the maintenance of a flagman at the crossing of Indiana street and said receiver's tracks in said town of Roachdale, Indiana, and petitioning the Railroad Commission to relieve said receiver from a

compliance with said ordinance. After hearing, the Commission entered an order denying the appeal and affirming the ordinance of the board of trustees of the town of Roachdale, Indiana, requiring said receiver to submit a satisfactory plan for the protection of said crossing within thirty days and allowing said receiver to file a petition for rehearing, to the end that the ordinance in question might be annulled and an order made by said town board in accordance with said plans when satisfactory to said board and approved by the Commission. The receiver filed a petition for rehearing on the 27th day of March, 1907, which was overruled by the Commission. The receiver has since complied with the original order of the Commission and installed proper bell and signals at the crossing.

The order entered in the above cause reads as follows:

ORDER.

The Town Board of the town of Roachdale, Indiana, having passed an ordinance requiring Judson Harmon, receiver of the Cincinnati, Hamilton & Dayton Railway Company, to maintain a flagman at the crossing of Indiana street and said receiver's tracks in the town of Roachdale, the said Judson Harmon, receiver, appealed to the Railroad Commission to overrule said ordinance. The case having been heard and investigated by the Commission and the chairman of the Commission having visited the site where said ordinance requires said receiver to keep a flagman, and it appearing from the investigation so made that the said crossing is in need of and requires protection, it is, therefore, ordered, That the resolutions and ordinance of the Board of Trustees of the town of Roachdale, Indiana, from which this appeal is taken, be and the same is hereby affirmed.

It is further ordered, That in the event that the said Judson Harmon, receiver, shall make and submit plans for the protection of the said crossing within the next thirty days, which shall be satisfactory to the Board of Trustees of the town of Roachdale, and to the Railroad Commission of Indiana, looking to the proper protection of this crossing by other means than by a flagman, and shall proceed as soon as possible to install and maintain such protection; that said Judson Harmon, receiver, may apply to the Commission for a rehearing of this case to the end that a rehearing may be had, the order of said Board of Trustees annulled and the matter remanded to said Board of Trustees of the town of Roachdale, that said board may make an order in accordance with said plans so to be submitted as before stated by the said Judson Harmon, receiver of the Cincinnati, Hamilton & Dayton Railway Company.

Entered March 7, 1908.

ORDER IN THE MATTER OF PETITION FOR REHEARING.

The Town Board of Roachdale, Indiana, having passed an ordinance requiring Judson Harmon, receiver of the C., H. & D. Ry. Co., to keep and maintain a flagman at the crossing of said receiver's track and Indi-

ana street, in the town of Roachdale, Indiana, and the said Judson Harmon having appealed from the ordinance so passed to the Railroad Commission of Indiana, and a member of the Commission having visited the site as required by statute, and finding that such protection was necessary, the Commission affirmed said ordinance. Whereupon, the said receiver filed his petition for a rehearing of said cause with the Railroad Commission, assigning as a reason for such rehearing that more adequate and desirable protection could be secured at less expense by said receiver by installing what is known as a crossing bell at said highway crossing instead of maintaining a flagman, alleging further that said crossing bell could be installed and maintained in such a manner that the station operator could stop the bell from ringing while any train stopped at the station and start it to ringing again as soon as such train started, and the Commission having heard statement of counsel and of engineers of the C., H. & D. Ry., representing said receiver, and having heard statement of a member of the Town Board of Roachdale and of the town clerk and attorney of said town, now finds that the protection offered by said receiver is not as satisfactory as the protection afforded by the services of a flagman, said petition for a rehearing is, therefore, overruled and refused.

No. 229. Noah T. Keasey et al. v. T. H., I. & E. Traction Co.

Petition for reduction of passenger fares heard at Brazil, and taken under advisement. Subsequently the same was considered and dismissed with the following recommendations:

"This cause having heretofore been heard and taken under advisement by the Commission, and the Commission having considered the same, and being advised in the premises that the respondent has acted within its legal rights in the establishment and enforcement of the passenger rates herein complained of, and that the same do not constitute unlawful discrimination, and that the rates cannot properly be changed by the Commission.

"It is therefore ordered, That this cause be and the same is now dismissed, but in the dismissal hereof it is recommended to the respondent that arrangements be made at once to provide a round-trip ticket from Seeleyville, Indiana, to Brazil, Indiana, at the rate of 25 cents, thus enabling its patrons at Seeleyville desiring to visit Brazil to accomplish the round trip for 5 cents less than under existing rates."

No. 230. Ex parte, Angola Railway and Power Company.

Petition for an extension of time within which to equip cars with air brakes as required by the law of Indiana. The prayer of the petition was granted. The Commission subsequently reconsidered the matter and denied the petition. The order entered herein was as follows:

"Comes now the petitioner and files its petition herein asking an extension of time within which to equip its cars with air brakes, as required by the laws of this State, and said petition reads as follows:

"The Commission having considered such petition and having, on April 25, 1907, granted to the petitioner an extension of time until May 1, 1908, within which to equip its cars with air brakes, as required by law, and the Commission being without authority to grant such an extension save for reasons which reasonably prevent a compliance with the law, and no such reason now being apparent, the petition should be and is therefore denied."

No. 231. G. Herman and other citizens of Pierceville, Indiana, v. Baltimore & Ohio Southwestern Railroad Company.

Petition by the citizens of Pierceville asking that the respondent be required to erect and maintain a suitable depot building at said town. The cause was continued for the reason that the railroad company agreed to erect the depot.

No. 232. Vandalia Railroad (Vincennes Division) crossing Indianapolis Southern Railroad at Switz City.

Application for approval of an interlocker at Switz City. The petition was filed and plans referred to the Commission's consulting engineer. On his report being submitted the plans were approved.

No. 233. Kinsey Brothers v. Chicago & Erie Railroad Company and the Vandalia Railroad Company.

This was a petition asking for a reduction in freight rates on grain to and from certain points on the lines of the respondents. The cause having been heard, the matter was adjusted in accordance with the prayer of the petition, and the respondents were permitted to file a tariff naming the rate and making same effective from date of filing with the Commission.

No. 234. In re Cincinnati, Indianapolis & Western Railway Company, and Judson Harmon, receiver, application to be relieved from constructing interchange track at Connersville, Indiana.

This was a petition wherein the petitioners sought to be relieved from the duty of constructing an interchange track at Connersville. After due consideration the prayer of the petition was denied. The order denying the same reads as follows:

"The petitioners in this cause having filed their petition on March 19, 1908, to be relieved of the duty of constructing an interchange track between their rails and the rails of the Cleveland, Cincinnati, Chicago & St. Louis Railroad Company at Connersville, Indiana, and having subsequently indicated to the Commission that they did not desire to introduce

any testimony concerning such petition, but submitted the same to the Commission for action upon evidence heretofore heard concerning such subject, therefore the Commission now takes such petition up for consideration, and after being advised in the premises does now deny such petition.

"It is therefore considered and ordered by the Commission, That the petition filed in this cause be and the same is now denied."

No. 235. M. C. Andrews et al. v. Wabash Railroad Company.

This was a petition filed by M. C. Andrews and others asking that the respondent be required to furnish better train service at Williamsport, Indiana. The matter was considered at a conference between representatives of the Commission and the respective parties, and a satisfactory adjustment was agreed upon. An order was entered, suspending further action upon the petition, and reading as follows:

"In this cause the Commission invited J. C. Sullivan, superintendent of the respondent, to meet Commissioner McAdams at the Lahr House, Lafayette, Indiana, on the 20th inst., at 8 p. m., for the purpose of considering the matters embraced in the petition. This conference took place and was attended by Commissioner McAdams, J. C. Sullivan, superintendent Wabash Railroad; W. V. Stuart, attorney Wabash, and Thomas Follen, D. P. A. Wabash Railroad. After reading the petition and correspondence and discussing the matter thoroughly, it was agreed by the superintendent that an order should be entered requiring east-bound train No. 28, passing Williamsport at 6:57 a. m., and west-bound train No. 9, passing Williamsport at 8:50 a. m., to make regular stops until such time as the present schedule shall be changed to furnish other facilities. This arrangement being satisfactory to the Commission and to the complainants, it is now ordered that further action upon the petition herein be held in suspense."

No. 236. In re Baltimore & Ohio Southwestern Railroad Company; application under long and short haul clause of the statute.

This was an application under the long and short haul clause of the statute. Notice was sent for publication in the Washington Herald. Subsequently the petition was withdrawn by the railroad.

No. 237. Leonard Evans et al. v. Chicago, Indianapolis & Louisville Railway Company.

On April 4, 1907, Leonard Evans and other citizens of Perry township, Lawrence County, Indiana, filed their petition for the construction and maintenance of a suitable depot and better train service by the Chicago, Indianapolis & Louisville Railway Company, in the town of Springville, ten miles northwest of Bedford. The petitioners alleged that the present depot was one that was aban-

done by the town of Springville many years previous; that the same was in a dilapidated and unsanitary condition; that but one train passed through said town each day. The Commission held a hearing at Springville, at which the officers of the respondent railroad company were present. The Chicago, Indianapolis & Louisville Railroad Company, at the conclusion of the hearing, agreed to take such steps as were necessary to remedy the objectionable conditions at the depot and since that time the improvements suggested by the Commission have been made. The Commission entered no order as to the train service complained of, for the reason that Springville is located upon a branch of the railroad which is incapable of earning operating expenses.

No. 239. E. H. Hill et al. v. Lake Erie & Western Railroad Company, for passenger depot at Deedsville, Indiana.

On January 16, 1908, E. H. Hill and a number of other citizens of the town of Deedsville, Miami County, Indiana, filed a petition with the Commission asking that the matter of better depot facilities and train service be taken up with the officials of the Lake Erie & Western Railroad, to the end that there might be erected at that place a suitable station for the comfort and accommodation of the patrons of the road. The facts developed in this case show that there was no passenger station at Deedsville and that the only structure for the accommodation of freight was a box car which was used for storage purposes. This case was first entered in the A. R. record No. 290, and was afterwards transferred to the regular docket No. 239. By direction of the Commission the chief inspector visited Deedsville, and his report disclosed the fact that Deedsville was a station where considerable business, both passenger and freight, was transacted; that it was one of the best local stations between Peru and Rochester. After our inspector's report was filed an effort was made to set the matter down for hearing, but the efforts of the Commission to settle the matter amicably was also continued and resulted successfully. On July 2, 1908, the Commission was advised by I. F. Leffel, a representative of the citizens of Deedsville, that the railroad company had arranged passenger and freight facilities that were fairly satisfactory to the petitioners and other citizens of Deedsville and vicinity; that said company had done more work at Deedsville since the matter had been taken up with the Commission than had been done in more than a third of a century before; that the old freight car that had served as a depot had been placed on a foundation with another car 9x30 feet; had been worked over and made to look like a house; had been properly

equipped, lighted, ventilated and heated, well painted outside and varnished inside; furnished with ample seating capacity; that the company had also graded around these buildings; had hauled several carloads of cinders and placed around the station so that it was not muddy; that the baggage car was to be placed in which to house the baggage of the traveling public. Mr. Leffel advises that the people of Deedsville and vicinity regard this as a great improvement in the way of convenience and comfort and that they were disposed to be satisfied and would ask for nothing further at present, as the "conveniences furnished by the company were comfortable, though the style of architecture was hardly up to date." He also advises that the company had made this station a regular stop for all day trains. Mr. Leffel closes his communication by thanking the Commission on behalf of the citizens of Deedsville and vicinity for its assistance in giving to them proper depot and train facilities.

No. 240. J. A. Pierson v. Vandalia Railroad Company.

This was a petition for a switch connection to be furnished by the Vandalia Railroad. The cause having been considered, and the parties submitting propositions, the cause was continued, awaiting the acceptance by the petitioner of the respondent's proposal to put in the switch on payment of \$175, to be refunded if business reached 100 cars per year.

No. 241. John A. Crask et al. v. Wabash Railroad Company.

This was a petition filed by the citizens of West Lebanon, asking for better passenger train service. The matter was heard at West Lebanon. The respondent having complied with the latter, said cause was entered on the docket as adjusted. The report and recommendations by Commissioner McAdams were as follows:

The original petition in this case was filed by citizens of West Lebanon and vicinity in Warren County against the Wabash Railroad Company, complaining of the passenger train facilities furnished by that company at that place. After the hearing was commenced citizens of Independence and vicinity, in the same county, whose railroad station is Riverside, on the line of the respondent, also filed a petition complaining of the same service at that point. This petition has been entered in the original case and they will be considered and determined as one. The situation involved in these complaints applies at all the stations on the line of the respondent in this State west of Lafayette excepting Attica and Williamsport, where the service is now satisfactory. Although no formal complaint has been filed as to the other stations, it is but fair to the company for the Commission to consider the complaints with reference to all these stations, namely, Shadeland, Wea, Westpoint, Riverside, West Lebanon, Marshfield, Johnsonville and State Line, as the complaint will most likely

recur as to each point until some adjustment has been made, or until the Commission at least shall have expressed its views. It is better to make an end of the investigation at once than to consider it by piecemeal.

The population of these various communities and the schedule of the company as to its passenger trains at such points and at Attica and Williamsport are as follows:

F Stops on signal. All trains daily except Nos. 50, 51, 76 and 77, which do not run on Sunday.

These stations are all surrounded by thickly settled agricultural communities, and the population has generally materially increased from that shown in the above tabulation. The adjacent country for many miles on all sides of these several stations is wholly dependent upon the respondent for railway facilities, including mail, freight and express, as well as for passenger travel.

The train schedule exhibited above went into effect March 15th last. Prior to that date for several months the company had in effect a schedule which rendered satisfactory service over all this territory. The marked difference between that and the present schedule is that No. 51 left Lafayette at 6 a. m. and furnished west-bound accommodations in the morning over the entire territory, also that the company then operated Nos. 52 and 53 between Lafayette, Indiana, and Litchfield, Illinois, which last mentioned trains were abandoned at the time the present schedule was put into effect. No. 53, under the old schedule, left Lafayette west bound at 11:45 a. m., being the present leaving time of No. 51, and performed service west bound in the afternoon, while No. 52 passed Danville, Illinois, at 11:58 a. m., and performed service east bound during the afternoon. These two trains so abandoned were locals and stopped at all stations. Another material change is that No. 6 east bound under the old schedule was a morning train and stopped at all stations, furnishing facilities east bound, which were satisfactory to everyone. Now it is an afternoon train and replaces No. 52, which has been abandoned as stated.

The reason assigned by the manager for so materially altering these facilities was to reduce the expenses of operation, and to conserve the revenues of the company, which are being very largely depleted on account of the great shrinkage in operating revenue, while there has been no corresponding shrinkage in the operating expenses. The reason so assigned is a good one and one which the Commission finds to be a justification for some change over the territory involved. However, the question is whether the best method has been pursued and to what extent the public service may be disorganized, if not disregarded, to accomplish the purpose in view. These trains are all interstate, and for that reason the Commission can make no order in this case other than as indicated in a like case recently determined by the Commission, involving the passenger service of the B. & O. S. W. Railway between North Vernon, Indiana, and Louisville, Kentucky, where the Commission went very fully into the legal questions involved, and for our views on such questions reference is now made to that proceeding.

Fish v. B. & O. S. W. Ry., Report 1907, p. 176.

The principal towns on this line in the vicinity of the territory involved are Lafayette, Indiana, on the east, and Danville, Illinois, on the west, distant from each other approximately 50 miles. These are both flourishing cities and recognized trade centers throughout the country within 25 miles in all directions from their respective locations, having each a population of from 25,000 to 35,000. Williamsport, the county seat of Warren County, is midway between these cities. Lafayette is the county seat of Tippecanoe County, and is distant 10 miles from West-point, the most westerly station on the line in that county.

It will be observed that by the present schedule it is not possible for

citizens along this line to travel eastward to Williamsport, the county seat of Warren County; to Attica, a good city on the line, or to Lafayette, the county seat of Tippecanoe County, until in the afternoon on No. 6, which enters the State east bound at 1:28 p. m. There is also a local freight east bound, No. 76, but it enters the State at the same time, but of course does no passenger business, following No. 6. This statement does not apply to Williamsport and Attica, from which places traffic may go eastward on No. 28 in the morning. After arrival at any of these points on No. 6 the return trip cannot be made until the next day, excepting to Westpoint, Attica, Williamsport and West Lebanon. It will be observed that No. 5, a fast train, stops on flag at Westpoint, a village of 287 people, and does not stop at West Lebanon, which is now a town of some 800 people, while No. 3, which is not as high a class train, stops at West Lebanon at 12:58 in the morning on flag, but does not stop at Westpoint.

The service west bound, it will be observed, is almost as bad as that east bound, excepting the stops at Attica and Williamsport. The first regular passenger train west bound does not leave Lafayette until almost noon. It is true there is a local freight train carrying passengers which leaves, west bound, early in the morning, but these trains are so uniformly off their schedule as to be very unsatisfactory and unreliable. The return trip eastward may be made on No. 50, which is satisfactory.

From most of these stations it appears one cannot get to the larger cities during the forenoon, nor can the citizens attend court nor transact other public business at the county seats in a reasonable manner without going the day before or remaining until the day after the business is dispatched. This condition should not exist if it can be reasonably avoided. Such service is not according to the legal requirements due from the company. The Wabash Company is unfortunate in the present situation. A traction company parallels its line through this State from the east to Lafayette, and over that portion of its line it does but a very light local business: hence, it is not justified in maintaining a local service for the entire line across the State, and has consequently, from time to time, withdrawn some of its local trains. The result is that conditions appear between Lafayette and Danville differing from those produced along the territory served by the traction line. What has added to the convenience of the people along the traction line has resulted in greater discomfort to those not so served. It is the duty of the company to render a reasonable service in so far as it reasonably can. Its revenues are now unsatisfactory, but we trust the condition is only a temporary one, and that the company will soon be restored to its normal position financially and will then be able to perform a service better than that which we now propose. The officers of this company realize the unsatisfactory conditions as they now exist, and manifest a willingness to correct them if a feasible plan can be suggested. The company, however, objects to further material interference with the schedules of their through trains, and insist that this cannot be done without to a very large extent interfering with the purpose of such trains, namely, through traffic between distant points. It may be safely suggested that when the time of these trains is not kept travel and the mails go to other competing lines.

The Commission does not desire now to make a formal order in this

case, but will give the company ten days within which to improve the service in some manner satisfactory to the Commission, and on failure so to do the Commission will make an order such as to it shall seem best.

As a possible help to the company the Commission suggests that No. 51 be scheduled to leave Lafayette at 6:30 a. m., west bound, and that No. 50, east bound, be scheduled to arrive at Lafayette at 7:30 p. m. This will furnish morning accommodations west, and will also enable passengers from the west to arrive in Lafayette in time for Saturday evening trade at the stores, or to attend theaters or other public meetings.

The local freight train should be reversed, and train No. 76, east bound, should leave Tilton at 6:30 a. m., and No. 77, west bound, should leave Lafayette at 1:30 p. m. These trains should be equipped with passenger coaches to furnish accommodations for such traffic as shall use them, and the train east bound, No. 76, should not be required to do any switching service at local points, which will interfere with its maintaining its schedule. If the company changes No. 51 as suggested, then the flag stop of No. 9 at Williamsport at 8:50 a. m. may reasonably be withdrawn, provided the mail is handled on No. 51 in pouches, and as this would relieve the company of one of the present flag stops of one of its fastest trains, we suggest that it is not unfair to require No. 28 to stop at West Lebanon for passengers for Lafayette, or beyond, and to stop No. 5 at West Lebanon to let off passengers from Lafayette, or beyond. If persons in the vicinity of West Lebanon desired to go to Indianapolis and return the same day, which is not an unreasonable desire, it would be impossible unless there should be an early east-bound service from that point. Under this schedule, as proposed, No. 51, west bound, should carry express so as to serve the stations along the line at least with perishables, such as must move daily either from Lafayette or Danville.

We have thought that the use of a motor car, capable of handling 50 to 75 people and light baggage and express, was the solution of the troubles under investigation, but the company claims that its investigations prohibit the venture at this time. We are not disposed to abide this conclusion as final, and suggest further investigation and actual experiment along that line. In the personal judgment of the writer the time is not far distant when such traffic as is now under investigation will be safely, expeditiously and satisfactorily handled by motor cars running at frequent intervals and operated at less expense than the company now sustains in maintaining its local service through this country.

ORDER.

"The respondent in this cause having complied with all the recommendations of the Commission made in its opinion heretofore filed in this cause, excepting to stop No. 5, west bound, at West Lebanon.

"Therefore, it is now ordered by the Commission, That this proceeding be and is now entered upon the docket as adjusted to the approval of the Commission on the condition, however, that all changes suggested by the Commission were made effective on May 24, 1908, excepting the stop of No. 28, east bound, at West Lebanon, Indiana, to handle Lafayette passengers, is to become effective June 1, 1908."

No. 242. Fauvre Coal Company v. The Wabash Railroad Company, the Vandalia Railroad Company, the Pittsburgh, Cincinnati, Chicago & St. Louis Railway Company.

This was a petition filed by the Fauvre Coal Company, asking for the establishment of a reasonable joint rate on coal from the Macksville district, Indiana, to Aetna, Indiana; or that the Wabash Railroad be required to establish and maintain a reasonable switching rate from Gary, Indiana, to Aetna, Indiana.

The cause having been heard, an order was issued, establishing a joint rate on bituminous coal in carload lots of 90 cents per ton. This order was as follows:

"The Commission having heard the evidence in this cause, and being fully advised in the premises, finds that there is no joint rate in effect on bituminous coal in carloads from petitioner's mines in the Macksville district on the Vandalia Railroad, in Indiana, to Aetna, on the line of the Wabash Railroad, in Lake county, Indiana, and that it is practicable to establish a joint route over the lines of said two railroad companies via their junction at Lakeville, Indiana, and that a reasonable rate on the movement of bituminous coal in carloads over such joint route is 90 cents per ton."

"It is therefore ordered by the Commission, That the Vandalia Railroad Company and the Wabash Railroad Company shall issue, publish according to law and file with this Commission a joint rate on bituminous coal in carloads from mines located on the St. Louis Division of the Vandalia Railroad Company in the Maxville district, in Indiana, to Aetna, Indiana, located on the line of the Wabash Railroad, and that the traffic move via the Vandalia Railroad to its junction with the Wabash Railroad at Lakeville, Indiana, and thence over the Wabash Railroad to destination at the minimum carload weight of 36,000 pounds.

"It is further ordered by the Commission, That said Vandalia Railroad Company and Wabash Railroad Company shall apply such rate to the movement of coal in carloads from mines in the Maxville district over the route above named for two years next after June 1, 1908, unless this order shall be sooner modified by the Commission."

No. 243. Indiana Manufacturers' and Shippers' Association v. Southern Indiana Railway Company, and Cleveland, Cincinnati, Chicago & St. Louis Railway Company.

Petition by the Indiana Manufacturers' and Shippers' Association asking for the establishment of a just and reasonable rate on coal from points on the Southern Indiana Railway to points on and reached by the Cleveland, Cincinnati, Chicago & St. Louis Railway. Intervening petitions were filed by the United Fourth Vein Coal Company, Green Valley Coal Company, and Big Vein Coal Company. The matter being heard and considered, the following opinion was delivered by McAdams, Commissioner:

OPINION.

"This proceeding concerns joint rates on bituminous coal from mines on the Southern Indiana Railway via Terre Haute, Indiana, and the line of the Cleveland, Cincinnati, Chicago & St. Louis Railway to all points east of Terre Haute, to and including Indianapolis, and to approximately all Big Four points in the territory commonly known as the Gas Belt. The subject of rates on coal to the Gas Belt territory from Indiana coal fields was under consideration by this Commission early in its existence and the subject was then thoroughly considered, and reference is now made to those proceedings in connection with this hearing. (Report of 1906, p. 157.) We now confirm what was determined in that hearing, and we now reaffirm the principles there announced so far as they are applicable in this proceeding.

"The rates then in effect on the lines of the respondents to the territory in question in this case continued until April 13, 1908, when they were withdrawn by the Southern Indiana Railway pursuant to notice filed with the Commission on March 31st last.

"The rates in effect were 50 cents per ton to all points east of Terre Haute, including Indianapolis, for all purposes. The effective rates to all the other points, with but few exceptions, were, for manufacturing purposes, 60 cents, steaming purposes, 75 cents, and domestic purposes, 90 cents per ton in carloads.

"Other effective like rates from the coal fields of Indiana have been published and applied to the same general territory and at many common points by the E. & T. H. and Big Four lines; by the Big Four line from its local mines; by the Vincennes division of the Vandalia to Indianapolis, and by that line and the Lake Erie & Western and Pan Handle to points beyond Indianapolis, and by the St. Louis division of the Vandalia to Indianapolis and the territory west thereof to Terre Haute. Some traffic has also moved over the Central Indiana from its connections at Brazil, and subsequent to the original hearing by the Commission as to coal rates to the Gas Belt the Indianapolis Southern has commenced operation and is now engaging in this traffic. There is no disposition on the part of any of the other carriers to disturb the rates as they have been applied for several years. They are all willing that they shall remain as now established, excepting the Southern Indiana, which was the moving spirit in canceling the rates now in question. The Big Four line manifested a willingness to continue the service, and it is fair to the Southern Indiana, however, to state that the Commission's information is that it withdrew the rates on account of its failure to longer agree with the Big Four as to the division of the joint revenues.

"There are more than 30 mines on the line of the Southern Indiana Railway, representing an investment of several million dollars. They produced last year about 1,800,000 tons of coal, and a very large per cent. of this tonnage moves to the points in question in this case. After this proceeding, which seeks the establishment of reasonable joint rates to these points, the Southern Indiana published a new tariff to all the points in question, showing an increase of 5 cents per ton over the old scale. It was the unanimous judgment of the coal operators and the coal consumers that coal could not be successfully marketed off the Southern Indiana in the

territory in question against the differential of 5 cents per ton, and that contracts could not be made on the basis of the proposed increased rates, and as a consequence the customers of the mines located on the Southern Indiana Railway would be driven from these markets and their competitors in the same field would obtain their business.

"These facts are all self-evident and the result one sure to follow the rules of competition and cost of production and delivery to point of consumption.

"While any one of these coal-producing lines maintains the present scale of rates in effect to these competitive points, all the other lines must do so or the mines on their line will not share in the business.

"That a rate voluntarily established and long maintained is presumed to be reasonable and remunerative under like conditions is a principle so well established as to forbid citation of authority.

"In the case of Cardiff Coal Company vs. C., M. & St. P. Railway, the Interstate Commerce Commission on April 6th last announced this principle, which is very apposite:

"It may be laid down as a general rule admitting of no qualification that a manufacturer or merchant who has traffic to move and is ready to pay a reasonable rate for the service has the right to have it moved and to have reasonable rates established for the movement, regardless of the fact that the revenues of the carrier may be reduced by reason of his competition with other shippers in the distant markets, and under all ordinary conditions he has the right also to have the benefit of through routes and reasonable joint rates to such distant markets if no reasonable or satisfactory through rate already exists."

"At the conclusion of the hearing of this cause the Commission, on account of the great public necessity therefor, determined the case at once and ordered the prior rates to be re-established, and they are now effective, and we now file this brief expression of some of the reasons which prompted us to take that action."

An application to modify the final order in the above cause was filed, and hearing thereon postponed indefinitely. The final order entered in this cause was as follows:

ORDER.

Come now the petitioners and the intervening petitioners by J. E. McCullough, their attorney, and the Southern Indiana Railway Company comes by Carl Wood, its attorney, and the Cleveland, Cincinnati, Chicago & St. Louis Railway Company comes by L. J. Hackney, its general counsel, and the Southern Indiana Railway Company now files its special appearance herein and motion to dismiss the petition, which special appearance and motion reads as follows (insert), and the Commission, after being advised in the premises, does not overrule such motion, and said respondent excepts, and said respondent now enters its special appearance and files its motion herein to make the petition more specific, which said motion reads as follows: (insert) and the Commission, after being advised in the premises, does not overrule such motion, and said respondent excepts, and this cause is now submitted to the Commission for hearing, and after the

hearing the evidence adduced and being fully advised in the premises, the Commission now finds:

That the allegations of the petition and the intervening petition are substantially true as therein stated, and that the respondents herein at the time of the filing of the petition herein, and at the time of the filing of the intervening petition herein, and at this time did not have and do not now have in effect on their lines of railroad just and reasonable joint rates of freight on bituminous coal in carload lots from mines located on the line of the Southern Indiana Railway Company in Indiana, to points located on the line of the Cleveland, Cincinnati, Chicago & St. Louis Railway Company in Indiana and named in the petitions in this case. And the Commission further finds that at the time said petition was filed, and at this time the intervening petition was filed, and at this time the said respondents did not have and do not now have in effect any joint rates on bituminous coal in carload lots from such mines to the points named in the petition herein. And the Commission finds that great public necessity exists for the establishment of joint rates on bituminous coal in carload lots from the mines on the line of the Southern Indiana Railway Company in Indiana to the points in Indiana named in the petitions in this cause. And the Commission further finds that the rates set forth in the tabulation next following in this order and decree are just and reasonable joint rates for the movement of bituminous coal in carload lots from mines on the line of the Southern Indiana Railway Company in Indiana to the points named in the petition herein. And the Commission further finds that at certain of the points named in such tabulation there should be a difference in rates, namely, rates on coal for domestic consumption, which will be found in the third column of such tabulation, and rates on coal for steaming purposes, which are found in the second column of such tabulation, and rates on coal for manufacturing purposes, which will be found in the first column of such tabulation, and such tabulation of just and reasonable joint rates is as follows:

JOINT RATES ON BITUMINOUS COAL C. L. FROM MINES IN INDIANA ON THE SOUTHERN INDIANA RAILWAY TO POINTS ON THE CLEVELAND, CINCINNATI, CHICAGO & ST. LOUIS RAILWAY IN INDIANA.

Rates in cents per net ton.

It is therefore ordered by the Commission, That the said respondents shall issue, publish and file with the Commission a joint tariff on bituminous coal in carload lots from mines on the line of the Southern Indiana Railway Company in Indiana to the points named in the tabulation next preceding in this order, and that the rates so to be issued, published and filed shall be the rates set forth in such preceding tabulation, and the said respondents shall apply the rates named in the first column of such tabulation to the movement of coal to be used in manufacturing purposes; and they shall apply the rates named in column two of such tabulation to the movement of coal which is used for steaming purposes; and they shall apply the rates named in the third column of such tabulation to the movement of coal to be used for domestic consumption.

It is further ordered by the Commission, That said respondents issue, publish and file tariffs with the Commission naming the rates so last above ordered on or before May 5, 1908, and that the respondents apply such rates to the movement of bituminous coal in carload lots on the terms and in the manner above indicated for two years next after May 5, 1908, and that the minimum carload weight for the movement of such coal shall be that indicated in the Southern Indiana Railway Company's G. F. O. No. 4-A, I. R. C. No. 159, issued December 15, 1906, effective January 17, 1907, now on file with the Commission as required by law, and to which reference is hereby made.

It is further ordered, That the Secretary of the Commission be and he is now directed to forward duly certified copies of this order under his signature as such and attested by the seal of the Commission to H. F. Houghton, general superintendent of the Cleveland, Cincinnati, Chicago & St. Louis Railway Company, at Indianapolis, Indiana, and to M. E. Sebre, superintendent of the Southern Indiana Railway Company at Terre Haute, Indiana, and he is directed to forward the same by special delivery in the United States mail, as required by law.

No. 244. Pennsylvania Company, operating the Pittsburgh, Ft. Wayne & Chicago Railway, v. The Gary & Interurban Railway Company.

This was a petition filed by the Pennsylvania Company, concerning a crossing of its line with that of the respondent, in Lake County, near the city of Gary, Indiana. Subsequently the petitioner filed a petition for dismissal, and the same was considered and the cause ordered dismissed.

No. 245. S. Hose & Son v. The Wabash Railroad Company.

This was a petition for an order requiring the respondent to perform switching service for petitioners, at Attica, Indiana. Subsequently it appearing that the Wabash Railroad had complied with the petitioner's request for service, the cause was entered as adjusted and finally disposed of.

No. 247. Southern Indiana Railway Company; application to maintain rates under long and short haul clause of the statute, on sand and gravel from Ft. Harrison to Sullivan, Ind.

After publication of notice in the Terre Haute Star, the cause was heard and an order entered permitting the petitioner to charge 24 cents per ton for hauling sand and gravel from Ft. Harrison, Indiana, to Sullivan, Indiana.

No. 248. Charles B. Curtis et al. v. Pittsburgh, Cincinnati, Chicago & St. Louis Railway Company.

Charles B. Curtis and forty-five other citizens of the village of Queensville, Indiana, and vicinity filed a petition with the Commission alleging that the respondent, the Pittsburgh, Cincinnati, Chicago & St. Louis Railway, had no agent in charge of the freight and passenger business at the village of Queensville, that it maintained no station and waiting room for the accommodation of passengers; that it would not receive freight from parties along its line for said point unless the same was paid in advance; that parties shipping from said point were obliged to travel a distance of four miles to North Vernon in order to bill out freight; that the respondent company maintained no depot for the storage of freight and unless consignees were present when freight arrived, the same would be exposed to the elements; that passengers from said point were deprived of the benefits of reduced rates from time to time granted by said company to all other points on said road. This matter was originally made an A. R. number, but was transferred to the regular docket, No. 248, and was heard at the village of Queensville, Indiana, by the Chairman of the Commission, on May 8, 1908. Mr. H. C. Meloy, attorney, representing the petitioners, and A. D. Conner, extra agent, representing the railroad company. There is some doubt in this case as to whether Queensville has one hundred inhabitants within a radius to bring it under the provision of the law concerning the duty of steam railroads to maintain depots. The evidence shows that the population, by actual count, was 115, but in order to make this population it required a radius of some three-quarters of a mile. Evidence further shows that there is a store located near the track of the respondent company and that passengers used this store as a waiting room and that the proprietor of the store occasionally took care of small lots of freight; evidence also disclosed the fact that the dissatisfaction with the accommodations were largely due to the Pennsylvania Railroad Company hav-

ing removed its telephone at North Vernon on account of some difficulty with the telephone people. The figures presented show that in the matter of freight during the year of 1906, \$2,146 was collected on freight both inbound and outbound at this place, and that during the year 1907, \$2,192 was collected; that of these amounts, during the year 1906, \$2,007 was collected on carload freight; during the year 1907, \$2,033 on carload freight, leaving less than \$200 on merchandise or L. C. L. shipments. The evidence also shows that the total passenger income per annum at the village of Queensville would not exceed \$200. In view of these facts the Commission concluded that it would not be justified in ordering a depot or the maintenance of an agent at Queensville and all it was able to accomplish in the premises was to secure the reinstallation of a telephone in the office of the railroad company at North Vernon, so that the persons who desire to make shipments from Queensville may bill such shipments by telephone.

No. 250. Winona Interurban Railway Company, petitioner, v. C., C. & St. L. Railway Company, respondent.

HUNT, Chairman:

In this case the petitioner, the Winona Interurban Railway Company, alleges that the C., C., C. & St. L. Railway Company has entered into an agreement with the Pennsylvania Company, operating the P., F. W. & C. Railroad, that it will not deliver any cars to the petitioner to be switched to consignees on the line of said Winona Interurban Railway, that the said C., C., C. & St. L. Railway Company has a connection with the petitioner at Warsaw, Indiana, and that the firm of Spencer, Hogan & Company, which is located on the line of said petitioner in the said city of Warsaw and not on the line of the said C., C., C. & St. L. Railway, desires to have all carload shipments consigned to it delivered to said Winona Interurban Railway; that the C., C., C. & St. L. Railway Company has been delivering the same, but that it refuses to continue to do so, thus causing unnecessary delay and expense in the delivery of carload freight to Spencer, Hogan & Company. The petitioner, therefore, prays the Railroad Commission to require the said C., C., C. & St. L. Railway Company to deliver such carload shipments to the Winona Interurban Railway to be switched to the wholesale house of said Spencer, Hogan & Company, located on its tracks. The C., C., C. & St. L. Railroad Company and the Pennsylvania Company deny that they have entered into any agreement on this subject, and the evidence does not disclose such agreement, but it does show that the action of the two companies was taken simultaneously, and that both companies have refused and do now refuse to deliver freight to the Winona Interurban Railway Company to be delivered to Spencer, Hogan & Company, or for any other parties. The evidence further shows that there is a physical connection between the petitioner's track and the respondent's track at Warsaw, Indiana; that some traffic, amounting to about four carloads,

have been delivered by said respondent to the petitioner for said Spencer, Hogan & Company, and that a great many carloads of coal and other material have been delivered by the said C., C., C. & St. L. Railway Company to said Winona Interurban Railway Company for the use of the petitioner. The agent of the C., C., C. & St. L. Railway Company at Warsaw testified that he had been instructed by his division freight agent to cease delivering freight in carload lots to said petitioner for said Spencer, Hogan & Company, and that in refusing to make further deliveries to said firm he was acting upon the instructions of his superior officers. The Commission is of the opinion that from a physical standpoint an interchange of carload traffic between the steam and interurban railroads at Warsaw, Indiana, is entirely feasible. Such interchange has been made without damage to the track or equipments of either the petitioner or the respondent, and loaded cars, weighing as much as 100,000 pounds, have passed safely over the tracks of the Winona Interurban Railroad, loaded with material for the use of that railroad. It is true that Mr. McKim, superintendent of the Western division of the Pennsylvania Lines, testifies that there are certain sharp curves along the petitioner's line in the said city of Warsaw over which the freight cars of the Pennsylvania Company cannot pass in safety. These are stated to be from 12 to 20 degrees in curvature. Mr. McKim, however, further testifies that curves 30 degrees are safe for freight cars to be operated over in switching service, and from other information gleaned from reliable sources the Commission believes this statement to be correct. It seems, therefore, both from the fact that the interurban and steam railroads have standard gauge track, and from the further fact that nearly all the evidence shows that interchange of traffic can be made at this point without danger either to the track or equipment of the steam and interurban roads that the objection from a physical standpoint is not entitled to much consideration. This interchange amounts to virtually to switching service and can be performed without danger.

The Commission is not impressed with the contention of the respondent that this interchange should not be made because it might reduce the chances of the steam roads for getting business by causing factories to locate along the line of the petitioner's road. This would afford larger opportunity for the shipping public and would bring steam and interurban roads into rightful competition. It is contended by the respondent that the petitioner has no interchangeable equipment, and that the statute does not apply, since it contemplates interchange only in cases where there can be a mutual exchange of cars. There is nothing in the statute that gives to the word "interchange" the meaning that is sought to be given it by the respondent. Reciprocity in the delivery of cars is not an essential in the enforcement of this statute. In the section now under discussion (3j of the Railroad Commission Act, 1907) steam roads are required to interchange business. It would probably not be contended by any carrier that it could not be required to deliver cars to a connecting carrier unless such connecting carrier were able to give it car for car. It may be undesirable from the standpoint of a well-equipped carrier to interchange business with its less fortunate competitor, which may have but a small per cent. of its equipment, but unless it were required to do so the weaker road could not

live, competition would be stifled and the interests of the public would suffer. The respondent and the steam railroads generally object to interchange of traffic with interurban railroads on the ground that their equipment would pass into the control of the interurban railroads and be used in the transaction of general interurban business. We think such abuse of equipment can be prevented by the Commission. That in its order requiring interchange it may safeguard equipment, and that upon a showing that the privilege granted had been abused the Commission would be justified in rescinding its order; thus leaving the parties in their original situation. This action is brought under subdivision j, section 3, of the act of 1907, amending the Railroad Commission act, which reads as follows:

"Provided that in special cases where it is practicable and the same may be accomplished without endangering the equipment, tracks or appliances of any such carrier, the Commission, upon application, may require any such steam or interurban or suburban railroad to interchange cars, carload shipments, less than carload shipments and passenger traffic, and for that purpose may require the construction of physical connections at junction points and the construction of switch and private track connections, as provided in this act."

The only case brought under this provision of the statute upon which the Commission has passed prior to this time is the case of the Farmland Stone Company vs. the C., C., C. & St. L. Railway Company and the Indiana Union Traction Company. In deciding that case the Commission said:

"We are of the opinion that the legislature meant to say just what it did say; that in special cases where it is practicable this interchange should be required between steam and interurban companies, and that it intended to place the whole matter within the discretion of the Commission, and that the Commission should judge as to the practicability of such interchange, and that it must determine what the statute contemplated. It might be practicable to take the cars of the steam railroad 6 miles and not practicable to take them 100 miles, and that this matter must also be determined by the Commission. Both the steam and interurban railroads are common carriers under the laws of this State. They receive their charter from the State, and they owe a duty to the public which must be discharged."

We are still of the opinion that the legislature meant to confer, and did confer, upon the Commission the power to determine in each individual case whether or not an interchange should be made. We do not believe that antagonism between steam and interurban roads should be permitted to retard the transaction of the business of the shipping public, and in the present case we think it is clearly demonstrated by Mr. McKim's evidence that this antagonism is the main reason for refusing such interchange. We are of the opinion that the interchange asked for in this case will, if granted, facilitate the business of the public and the petitioner without hardship to the respondent. We believe that an interchange of traffic in carload lots between the C., C., C. & St. L. Railway Company and the Winona Interurban Railway Company at Warsaw is entirely safe and practicable; that freight in carload lots may be safely delivered by the C., C.,

C. & St. L. Railway Company to the Winona Interurban Railway Company over its connecting switch at Warsaw, Indiana, and that it can be safely transported by the last named carrier to the side track of Spencer, Hogan & Company, and an order will be entered requiring that such interchange and delivery be made.

ORDER.

The Commission having heard the evidence in this case and also argument of counsel, and having given due consideration to the law and the facts, now

Orders, That an interchange of traffic in carload lots between the Cleveland, Cincinnati, Chicago & St. Louis Railway Company and the Winona Interurban Railway Company, at Warsaw, Indiana, be established as to traffic to be delivered to the side track of Spencer, Hogan & Company.

And it is further ordered, That the Cleveland, Cincinnati, Chicago & St. Louis Railway Company deliver to the Winona Interurban Railway Company over its connecting switch at Warsaw, Indiana, freight in carload lots for delivery to the side track of Spencer, Hogan & Company, and that the Cleveland, Cincinnati, Chicago & St. Louis Railway Company shall also receive from the Winona Interurban Railway Company empty cars used in handling this traffic, this order to become effective on and after January 1, 1909.

It is further ordered by the Commission, That the cars delivered to the Winona Interurban Railway Company by the Cleveland, Cincinnati, Chicago & St. Louis Railway Company shall, at the earliest possible time after the same shall have been unloaded, be delivered back to the Cleveland, Cincinnati, Chicago & St. Louis Railway Company, and shall not be used by the Winona Interurban Railway Company in the transaction of its general interurban business between points upon its own line; nor shall said Winona Interurban Railway Company divert or cause to be diverted any of said cars to the tracks of any railway other than the said Cleveland, Cincinnati, Chicago & St. Louis Railway Company, except with the consent of the last named road.

The Commission reserves the right to modify or rescind this order at any time it may deem it necessary so to do in order to protect the track or equipment of either the petitioner or the respondent, or for any other reason that may seem proper to the Commission.

No. 251. Winona Interurban Railway Company, petitioner, v. P., C.; C. & St. L. Railway Company, respondent.

This was a proceeding similar in character to No. 250 *supra*. An opinion and order were entered therein substantially the same as those entered in No. 250. Suits have been brought to set aside the orders in both these cases.

No. 252. Cleveland, Cincinnati, Chicago & St. Louis Railway Company v. The Southern Indiana Railway Company.

This was a petition filed by the Big Four Railway for a division of coal freight rates. The cause having been heard by the Commis-

sion, an order was issued, making division of the joint rate on coal as between the petitioner and respondent. Subsequently the Big Four Railway and the Southern Indiana Railway have begun actions in the Bartholomew Circuit Court, to set aside the order entered in this cause. These cases are now pending. The opinion and order entered thereunder as above indicated, were as follows:

Wood, Commissioner:

The petition invokes the authority of the Commission to make a just and fair division between the parties of the charges arising from the transportation of coal from the Linton District on the Southern Indiana Railway via the C., C., C. & St. L. Ry. to Indianapolis, and other towns and cities named in the petition, situated generally in what is known as the Gas Belt territory.

At the hearing it was practically conceded that the divisions now made to the Gas Belt should continue, and the contention was thus narrowed as to what percentage of the joint rate of 50 cents a ton to Indianapolis should be allowed to each of the said railway companies.

At the hearing statements were made by counsel and by the general freight agent of respondent, but no evidence of the cost of the service, and no figures of the actual out-of-pocket cost of transportation were submitted. The Commission must, therefore, decide this case on such statements as were either not controverted or were clearly facts, and on such laws, general rules, information and comparisons as are on file in its office, and as it is authorized to use.

Generally, percentage joint traffic rates are constructed upon a mileage basis. Where either the originating or delivering line carries a very short distance, as for instance, five, ten or fifteen miles in an aggregate haul of say 100 or more miles, the proration is made upon a constructive mileage basis. Often also the originating line is allowed a *bonus* above the mileage pro rate, but there are two important exceptions to this practice:

(a) Where the delivering line is in position to exchange very attractive tonnage in return;

(b) Where the delivering line can furnish all the business required from its own territory it would be unwilling to allow the customary percentages obtaining for other traffic.

Applying these traffic rules and customs to the case before us, we find that the mileage on petitioner's line is seventy-two (72) miles and on respondent's line is forty-two (42) miles. This would pro rate the Indianapolis rate 65 to petitioner and 35 to respondent. We find that some coal is mined on petitioner's line between Indianapolis and Terre Haute and that petitioner is greatly interested in carrying coal to Indianapolis from many points where it makes a longer haul and consequently a higher rate. We find so far as we can conclude from the facts before us, that the cost of transportation service of the two companies is about the same, mileage considered. We find the average capacity of the Southern Indiana coal cars is about thirty-two tons, while the capacity of the E. & T. H. cars is forty-two tons. We find that the present division for both

petitioner and respondent and for petitioner and the E. & T. H., the distance and service on the E. & T. H. and Southern Indiana being practically the same, is 60 and 40, and we find also that the division of the joint rate between the Vandalia and the Southern Indiana and E. & T. H. (the Vandalia paralleling petitioner's road between Tere Haute and Indianapolis) is 60 and 40. And so it seems to us that the general rule for prorating, and the practices of these companies with reference to this very service and the mileage and cost of operation all indicate that the percentages heretofore made by petitioner with the Southern Indiana and now made and prevailing between petitioner and the E. & T. H. and between the Vandalia and Southern Indiana and the Vandalia and E. & T. H. in the same territory should not be disturbed but should continue and remain effective.

The difficulty of making a division of the joint rate arises from the fact that while fifty cents a ton affords a very fair return to a single line, it does not yield very much when divided between two lines. We shall concede also that if the basis of rate making, generally followed by the carriers, namely, the territorial basis, that is to say, "the traffic productiveness of a given territory, and the highest revenue that can be derived from that territory" were considered alone, a percentage of the joint rate would not yield much return, at least to one of the carriers, a party to this proceeding. Yet, we are informed that even on the "unit of revenue from a given territory" basis, it is permissible in C. F. A. territory to make a minimum of $\frac{1}{2}$ cent per ton per mile for low class commodity traffic, and as a matter of fact, there are rates even lower than this minimum. And it will be noted that the joint rate to Indianapolis now under consideration is about this minimum. We must call attention, however, to the fact that the statutes of this State prescribing physical connection between connecting and intersecting lines, and the interchange of business between these lines, were enacted on the theory of a continuous line and highway and carriage between points on two or more railroads in this State, and that these laws and competition and market must be considered as well as the rate making practices of the carriers with reference to territorial areas of revenue. Indeed, there is the highest authority for the principle upon which these Acts of the General Assembly are founded, that the State in the discharge of its public duties, while it must stop short of destruction or confiscation, is not guided solely by a question of profit in the governmental function (governmental whether exercised by carrier or Commission), of making or approving rates, *Cotting v. K. C. Stock Yards*, 183 U. S., p. 93.

At the hearing, as said above, no evidence was introduced by either party as to the exact cost of transportation. It seems to us that this ought to have been done; certainly it would be far more satisfactory to the Commission to have its conclusions justified by figures which would demonstrate their correctness. When we came to make up our findings and conclusions we were so impressed with this fact that we proposed to the parties to re-open the case in order that they might introduce evidence which would show the transportation cost of the movement from the point of origin to destination. While one of the parties expressed a doubt about its ability to furnish these figures, it agreed to do the best

it could. The other party said "It is impossible to prepare figures which will be substantial help at this time."

Our duty is imperative under the statute to make the division, and we must accordingly come to a conclusion as best we can from the statements, information and evidence available to us.

It has been held by the courts of at least one of the states that the equitable principle of division between railroad companies where two or more companies carried goods over their own roads as one carriage was the distribution *pro rata* of the aggregate rate according to the length of carriage of each company.

Rood v. the C., M. & St. P. Ry. Co., 43 Wis. 146;

Ackley v. the C., M. & St. P. Ry. Co., 36 Wis. 252;

Streeter v. the C., M. & St. P. Ry. Co., 44 Wis. 383.

We think we are justified in the conclusion that where no evidence is furnished to show that the cost of service on the two lines is greatly different, to follow the rule laid down in these cases. To make the division according to mileage, the percentage accruing to petitioner would be 65 and to respondent 35 of the Indianapolis rate. However, inasmuch as these companies have heretofore generally divided this rate on 60 and 40, and as that was the percentage at the time this controversy arose, and still prevails with reference to petitioner and E. & T. H. and with reference to the Vandalia and respondent and Vandalia and E. & T. H. for substantially the same service, we think that we will best conform to what is right by following the customs and practices of these companies in the divisions heretofore generally made by them, as to all the towns and cities named in the petition, and an order will be entered accordingly.

ORDER.

June 19, 1908.—This cause having been heard and the Commission being advised in the premises, does now order that the joint rate on coal in carload lots from mines in Indiana on the Southern Indiana Railway to the following named points or towns and cities on the Cleveland, Cincinnati, Chicago & St. Louis Railway in Indiana shall be divided between the petitioner and respondent as follows, namely: on manufacturers' coal of the joint rate of 60 cents a ton, to the petitioner 35 cents and to the respondent 25 cents; on steam coal of the joint rate of 75 cents a ton, to the petitioner 50 cents and to the respondent 25 cents a ton; on domestic coal of the joint rate of 90 cents a ton, to the petitioner 60 cents a ton and to the respondent 30 cents a ton; said points or towns and cities being as follows (all in the State of Indiana):

Avon,
Alexandria,
Alfont,
Alliance,
Anderson,
Brightwood,
Carthage,
Chesterfield,
Daleville,

Danville,
Delmar,
East Yards,
Emporia,
Fairmount,
Farmers,
Farmland,
Fortville,
Fox's,

Gale,
Gravel Pit,
Greencastle,
Hadley,
Henderson,
Hunters,
Ingalls,
Jonesboro,
Junction,
Kennard,
Knightstown,
La Fayette,
Lawrence,
Lena,
Linwood,
McCords,
Marion,
Markleville,
Maxwell,
Mohawk,
Mt. Comfort,

Muncie,
New Castle,
Oaklandon,
Okalla,
Otis,
Parker City,
Pendleton,
Reno,
Rushville,
St. Mary's,
Sanford,
Selma,
Shirley,
Summitville,
Sunnyside,
Wilkinsen,
Willow Branch,
Winchester,
West Side,
Yorktown.

It is further ordered, That the joint rate of 50 cents a ton on coal in carload lots from mines in Indiana on the Southern Indiana Railway to Indianapolis via the Cleveland, Cincinnati, Chicago & St. Louis Railway shall be divided between the petitioner and respondent as follows, namely: to the petitioner 30 cents a ton, to the respondent 20 cents a ton.

It is further ordered that this order shall take effect on the 22d day of June, 1908, and shall remain in force while said rate is effective for two years from date hereof.

It is further ordered that the Secretary shall forward by United States mail, certified copies of this order to the petitioner and to the respondent.

No. 254. The Queen Coal and Mining Company v. Southern Indiana Railway Company, and Chicago & Eastern Illinois Railroad Company.

This was a petition filed by the Queen Coal and Mining Company asking for the establishment of a joint rate on coal from Jasonville, Indiana, to Attica and Brook. The matter being heard and considered, an order was entered, requiring the publication of a joint rate of 70 cents per ton to Attica and 80 cents per ton to Brook from Jasonville. Subsequently this order was modified so as to apply only to the Queen Mine, located in the vicinity of Jasonville, Indiana. Afterwards the order was extended to include the Templeton mine. Later, upon application of the Big Vein Mining Company, the Commission considered whether the rates should be applied to the entire Linton district. This application was granted.

The report and the several orders entered herein are as follows:

This is an application by the petitioner to have the Commission enter an order requiring the Chicago & Eastern Illinois and the Southern Indiana Railroad Companies to put in operation a joint rate on coal shipped from Jasonville to Attica and Brook, and intermediate points upon the former railway. The matter was submitted upon oral statements made at the hearing by representatives of the respective parties. After due consideration the Commission granted the application and entered an order establishing a joint rate. The facts and the conclusions of the Commission are set forth in the following opinion by

DOWLING, Commissioner:

The petitioner is a coal mining company, whose mine is situated at Jasonville, Greene County, Indiana, in the Linton coal district. It desires to obtain a market for its product in the towns of Attica and Brook, and all points south thereof, located on the Chicago & Eastern Illinois Railroad. Prior to April 1, 1908, the Southern Indiana Railroad Company and the Chicago & Eastern Illinois Railroad Company had a joint rate on bituminous coal from Jasonville of 70 cents to Attica and 80 cents to Brook. On the date aforesaid these rates were cancelled at the instance of the Chicago & Eastern Illinois Railroad Company, and in lieu thereof was substituted a combination of locals which aggregated 90 cents to Attica and \$1.00 to Brook. At these rates, it will be impossible for the petitioner to market its coal at any of the points above mentioned. If the former rates are re-established, the petitioner will probably be able to sell 10,000 or 15,000 tons per year in the Attica and Brook territory.

The Chicago & Eastern Illinois Railroad Company resists the petition for the alleged reason that there no longer exists any necessity for a joint rate on coal from the Linton district, with the Southern Indiana Railroad Company, inasmuch as the latter's line now extends the entire distance to Chicago; and for the further reason that the coal shipped from the petitioner's mine into the Attica and Brook territory displaces coal whose shipment originates at points upon the line of the Chicago & Eastern Illinois Railroad in Indiana.

As to the first ground of objection, the Commission is of the opinion that while the occasion for a joint rate has ceased, so far as the needs of the Southern Indiana Railroad are concerned, the necessity of the case requires such joint rate, to afford proper opportunity for the petitioner to market its product. Presumably, also, it will be to the advantage of Attica, Brook and neighboring points, to secure another competitor in the coal trades. The present combination of locals is prohibitive so far as the petitioner is concerned; while a restoration of the joint rate will enable the latter to do a considerable amount of business.

Regarding the second ground of objection, the Commission concludes that it will be only fair to the petitioner, and in recognition of its common law rights, to permit it to come into competition with coal operators located at about the same distance from Attica and Brook as is the petitioner, and whose mines are situated along the line of the Evansville & Terre Haute Railroad in Sullivan County. (Cardiff Coal Co. v. C., M. & St. P.

Ry. Co., I. C. C., decided April 6, 1908.) The latter are now charged 70 cents to Attica upon a haul of 113 miles and 80 cents to Brook upon a haul of 156 miles. From points in the Linton District to Attica via the Southern Indiana Railroad the distance is approximately 112 miles, and from such initial points to Brook it is 165 miles. It will be seen, therefore, that the distance over which the petitioner's coal is carried is nearly the same as that over which its competitors' product is transferred. To permit the Chicago & Eastern Illinois Railroad to give an advantage of 20 cents per ton to shippers located along the Evansville & Terre Haute Railroad, which is an affiliated line with the C. & E. I., would result in a monopoly of the trade by these shippers, so far as the petitioner is concerned.

It is, therefore, the judgment of the Commission that the joint rates on coal in force immediately prior to April 1, 1908, over the Southern Indiana and the Chicago & Eastern Illinois Railroads, from Jasonville to Attica and Brook, and to points south of these towns upon the line of the C. & E. I. R. R., should be re-established, and it is accordingly so ordered.

The evidence in the above entitled cause having been heard, the Commission, being fully advised therein, finds that there exists no joint rate on coal shipped over the lines of the Southern Indiana Railroad and the Chicago & Eastern Illinois Railroad from Jasonville, Indiana, to Attica and Brook, Indiana, and to intermediate points; and the Commission further finds that a joint rate of not more than 70 cents per ton to Attica and 80 cents per ton to Brook should be established.

It is therefore ordered, That the respondents, and each of them, be and they are now notified and required to cease and desist on or before Wednesday, July 1, 1908, from charging, demanding, collecting or receiving for the transportation of coal in carload lots from Jasonville, on the Southern Indiana Railway, to Attica, on the Chicago & Eastern Illinois Railroad, more than 70 cents per ton, and from Jasonville, on the Southern Indiana Railway, to Brook, on the Chicago & Eastern Illinois Railroad, more than 80 cents per ton.

It is further ordered, That said respondents be and they are hereby required to establish and put in force on or before the 1st day of July, 1908, a joint rate of not more than seventy (70) cents per ton for the transportation of coal in car loads from Jasonville, on the Southern Indiana Railway, to Attica, on the Chicago & Eastern Illinois Railway, and a joint rate of not more than eighty (80) cents per ton for the transportation of coal in car loads from Jasonville on the Southern Indiana Railway to Brook, on the Chicago & Eastern Illinois Railway, during a period of two years next after July 1, 1908.

It is further ordered, That the Secretary send a certified copy of this order to the superintendents of each of the respondents by registered United States mail.

MODIFICATION.

"Comes now the parties in the above entitled cause; and the matter of the modification of the order heretofore entered herein being submitted to the Commission and the latter being duly advised, now orders that the original order made in said cause on the 18th day of June, 1908, be modified

in this respect: wherever in said order the town of Jasonville is named as the initial point of shipment of coal in carload lots the same shall be changed to read 'The Queen Mine, formerly designated as the Fry Mine, and located near the town of Jasonville, Indiana.'"

REPORT ON MODIFICATION.

DOWLING, Commissioner:

I beg leave to report that the application for a modification of the final order in this cause, which application was filed by the Coal Bluff Mining Company, of Terre Haute, Indiana, as proprietor of the Templeton Mine, was heard by me at the time and place fixed for said hearing, and was argued by representatives of the petitioner and the carriers interested.

It appears that the same reasons exist for extending the scope of the order entered in this cause, as justified its original promulgation. The Templeton Mine, located upon the Southern Indiana Railroad, desires to enter the coal market at points upon the C. & E. I. reached by the Fry Mine, which is also located on the Southern Indiana, and to compete with the latter mine, as well as with the mines located along the line of the C. & E. I. and E. & T. H. railroads. The C. & E. I. resists the enlargement of the order, upon the ground that it is entitled to protect the mines situated upon its own and its affiliated roads, and that, if the Templeton Mine is enabled to enter the market now furnished by the C. & E. I. and E. & T. H. mines, the latter will be prejudiced; or if not, then the C. & E. I. will be compelled to lower its rates so as to hold this market for coal originating on its line and that of the E. & T. H.

As indicated in the opinion heretofore filed, the reason advanced by the C. & E. I. is not persuasive. However desirable it may be, from the standpoint of the coal mine operators, on the two affiliated roads, or from that of these roads themselves, to secure the market at Attica and Brook for their produce exclusively, the interest of other mine owners and of the consumers at these points must also be regarded. These interests will be subserved by permitting the petitioner to enter the field as a competitor; nor does it appear that this will drive the other operators from the market.

In view of the objection made by the C. & E. I., that the establishment of the joint rates for the benefit of all mines on the Southern Indiana would disarrange its rates and embarrass its own traffic, the order herein entered will be applied to the Templeton Mine only.

My conclusion and recommendation are that the maximum joint rates fixed by the order hereinbefore rendered be made to apply also to shipments of coal in carload lots from the Templeton Mine on the Southern Indiana Railroad to Attica and Brook, situated on the C. & E. I. Railroad; said joint rates being 70 cents per ton to Attica and 80 cents per ton to Brook.

SUPPLEMENTAL ORDER.

Comes now the intervening petitioner, the Coal Bluff Mining Company, of Terre Haute, Indiana, and files its intervening petition, praying that the order hereinbefore entered, establishing for the respondents a joint rate of not more than 70 cents per ton on carload shipments of coal from

the Fry Mine to Attica, Indiana, and a joint rate of not to exceed 80 cents per ton for such shipments from the Fry Mine to Brook, Indiana, be extended to include shipments to said points from the Templeton Mine, owned by said intervenor.

And said intervening petition being heard upon oral statements of the respective parties aforesaid, and being taken under advisement by the Commission, and the Commission being fully advised in the premises,

It is therefore ordered, That the respondents and each of them be and they are now notified and required to desist on or before Tuesday, December 1, 1908, from charging, demanding, collecting or receiving for the transportation of coal in carload lots from the Templeton Mine, located in the Linton Coal District, in the State of Indiana, to Attica, Indiana, on the Chicago & Eastern Illinois Railroad, more than 70 cents per ton, and from said Templeton Mine to Brook, Indiana, on the Chicago & Eastern Illinois Railroad, more than 80 cents per ton for coal in carload lots;

It is further ordered, That said respondents be and the same are hereby required to establish and put in force on or before the 1st day of December, 1908, a joint rate over their lines of not more than seventy (70) cents per ton for the transportation of coal in carload lots from the Templeton Mine aforesaid to Attica, on the Chicago & Eastern Illinois Railroad, and a joint rate of not more than eighty (80) cents per ton for the transportation of coal in carload lots from said Templeton Mine to Brook, on the said Chicago & Eastern Illinois Railroad, during a period of two years next after December 1, 1908.

It is further ordered, That the Secretary of the Commission send a duly certified copy of this order to the superintendents of each of the respondents by registered United States mail.

All of which is ordered and directed by the Commission.

SUPPLEMENTAL REPORT.

DOWLING, Commissioner:

I beg leave to report that on December 3, 1908, at the rooms of the Commission, Commissioner McClure and myself heard the application of the Big Vein Mining Company for an extension of the order heretofore made in the above entitled cause, so as to include the petitioner in the establishment of joint rates over the Southern Indiana and the C. & E. I. Railroads to Attica, Brook, and other points. At the hearing, the Southern Indiana stated that it had no objection to the joint rates being established from the mines in the Linton District over its own road and that of the C. & E. I. to Attica and Brook. The C. & E. I. agreed that the rates already established might be extended to the Linton District so far as related to shipments destined to points south of Swanington upon the line of the C. & E. I.; the latter point being located about midway between Attica and Brook.

It developed at the hearing that all coal traffic moving over the C. & E. I. via Brazil and Terre Haute, destined for points north of Swanington, is customarily diverted to the main line of this road which runs from Otter Creek Junction in Indiana into and through the eastern portion of Illinois, and thence to Momence in the latter State, from which point the traffic moves southward to the Indiana Division; the main line connecting with

the Indiana Division at Percy Junction, a short distance north of Swanington. The reason for this diversion was stated to be that the Indiana line between Otter Creek Junction and Swanington has a heavy up-grade, and the track itself is in bad condition; rendering it more economical for the railroad to transport the traffic by the more circuitous interstate route, than to carry it directly north upon its Indiana line. While it was conceded by the C. & E. I. that the coal could, from a transportational standpoint, move north on the intrastate line to points north of Swanington, it was contended that to do so would subject the carrier to heavy additional expense; that while 80 loads could be hauled northbound over the main line, the same engine could not haul over 40 loads on the Indiana Division on account of the grades.

One of the principal grounds upon which the joint rates to Attica and Brook have been established by the Commission was, that the rates charged for transportation of coal from mines located on the E. & T. H. to Attica and Brook were respectively 70 and 80 cents, the haul being approximately the same as from the Southern Indiana mines. It now appears, for the first time, that all of this traffic destined for points north of Swanington is diverted over an interstate route. It has been held that where the termini of a shipment are within one State, but a part of the journey between such points lies in another State, the traffic is interstate and charges therefor cannot be fixed by the State wherein the termini are located. (*Hauley v. Kansas City Southern Ry. Co.*, 187 U. S. 617, and see *Lord v. Steamship Co.*, 102 U. S. 541; *Pacific Coast Steamship Co. v. R. R. Commissioners*, 9 Sawyer 253.) There are a number of State decisions to the contrary (see *Campbell v. Chicago, etc., Ry. Co.*, 86 Iowa 587; *Seawell v. Kansas City, etc., R. R. Co.*, 119 Mo. 222; *R. R. Commrs. v. Western Union Tel. Co.*, 113 Mo. Car. 213; *Leavell v. West. Union Tel. Co.*, 27 L. R. A. 843 (N. C.)) ; but the question, being a federal one, is governed by the decisions of the Supreme Court of the United States, above cited.

We are therefore of the opinion that the Commission is without authority to fix a joint rate for traffic which is diverted over the main line of the C. & E. I., running through the eastern part of Illinois, and that the rates to be fixed by the order entered herein should be limited to intrastate shipments exclusively.

However, shippers may require a routing over the Indiana Division of the C. & E. I. under the right secured to them by section 3 (n) of the Acts of 1907, page 463. In such event, it appears to the Commission that while the condition of the Indiana Division is clearly inferior to that of the main line, yet the difference is not so great but that the rate heretofore found to be reasonable in this proceeding for Brook, should apply.

It is therefore recommended that the Commission order the adoption by the C. & E. I. and Southern Indiana, as maximum joint rates, to be operative only on intrastate shipments, 70 cents per ton on coal in carload lots from all mines in the Linton Coal District to Attica and 80 cents to Brook; rates to points south of these two places to be made by the carriers according to the requirements of the law governing long and short hauls.

SECOND SUPPLEMENTAL ORDER.

The evidence upon the application of the Big Vein Mining Company for an extension of the order heretofore entered herein having been heard and the Commission being advised in the premises,

It is therefore ordered, That the respondents and each of them be and they are now notified and required to cease and desist on or before February 1, 1909, from charging, demanding, collecting or receiving for the transportation of coal in carload lots from any coal mine or coal shipping point in the Linton Coal District, on the Southern Indiana Railway, to Attica, on the Chicago & Eastern Illinois Railroad, more than 70 cents per ton, and from said points in said Linton Coal District, on the Southern Indiana Railway, to Brook, on the Chicago & Eastern Illinois Railroad, more than 80 cents per ton on shipments of coal in carload lots from the points aforesaid to points south of Brook or south of Attica, on the line of said Chicago & Eastern Illinois Railroad in Indiana. Said respondents are hereby required to cease and desist from charging, demanding, collecting or receiving rates greater than the above-named maximum rates respectively, or rates which shall, in view of the order herein entered, be violative of the long and short haul statute in force in this State.

It is further ordered, That said respondents be and they are hereby required to establish and put in force on or before the 1st day of February, 1909, a joint rate of not more than seventy (70) cents per ton for the transportation of coal in carload lots from mines or coal shipping points in the Linton Coal District, on the Southern Indiana Railway, to Attica, on the Chicago & Eastern Illinois Railroad, and a joint rate of not to exceed eighty (80) cents per ton for the transportation of coal in carload lots from said points in said Linton Coal District, on the Southern Indiana Railway, to Brook, on the Chicago & Eastern Illinois Railroad; and on shipments of coal in carload lots to points south of Brook, or south of Attica, on the line of the said Chicago & Eastern Illinois Railroad in Indiana, the said respondents shall, on or before the date last aforesaid, put in force joint rates which shall not exceed the above named maximum rates respectively, and rates which shall not, in view of the order herein entered, be violative of the long and short haul statute in force in this State.

It is further ordered, That all of said joint rates shall be in effect for and during the period of two years next after February 1, 1909, and that said rates shall apply only to such shipments as move entirely within this State.

It is further ordered, That the Secretary send a certified copy of this order to the respective superintendents of the respondents by registered United States mail.

All of which is ordered and determined by the Commission.

No. 255. Indianapolis Light and Heat Company v. Baltimore & Ohio Railroad Company, and thirty-six other roads.

Petition by the Indianapolis Light and Heat Company seeking an amendment of car service rule 2 by limiting the demurrage charge, payable by certain classes of public service corporations, to

per diem charges assessed by the carrier over whose line the shipment is made against other carriers for use of cars while off the line of the owning carrier; and further asking an amendment of car service rule 7 to conform to amendment to rule 2. After formal hearing the cause was dismissed. The opinion rendered was as follows:

Wood, Commissioner :

The petitioner, Indianapolis Light and Heat Company, alleges that it is a public service corporation and supplies about 13,000 customers with electric current in the city of Indianapolis, including the Federal, State and municipal buildings, the fire department, school buildings, telegraph, telephone and railroad companies, and other public and private consumers. The Indianapolis Water Company, petitioner, in like manner and quantity, serves public and private consumers with water. The latter company has no complaint to make of present car service against the respondents, but joins in this proceeding because it may hereafter need a modification or change in car service rules.

The Indianapolis Light and Heat Company complains that rule 7 of the rules heretofore made by the Commission applies in terms only to shippers and not to consignees, and prays that the same shall be amended so as to include consignees. We observe as to this that the uniform construction of this rule by the Commission and the carriers is to apply the same to consignees who are regarded as shippers within the meaning of the rule. There has been no exception in practice, and hence no change is necessary in this regard.

Petitioner complains also that the rule provides no procedure by which a hearing can be had with reference to car service claims. So far as the Commission is concerned, a hearing would be useless if there is no authority to grant relief. The Commission can make rules. It has neither authority under the statute to decide such cases on their merits, nor to enforce the rules. These are matters for the courts.

Referring to complaint marked Subdivision (c) in the petition, we do not think that we are authorized or that it would be practicable to make a rule providing for rebates or refunds in cases where excess cars are ordered because of anticipated strikes. In such cases more coal could be ordered than needed for ordinary use, but it could not be stored in cars. If this were done, petitioners, or the class of shippers to which petitioners belong, might so hold the cars that other persons and shippers, the general public, would be unable to get coal and store it away in anticipation of a strike.

The chief contention of petitioner is that rule 2 of the Commission's rules should be changed so as to reduce the demurrage charge from one dollar a car per day after 48 hours' free time for unloading to 25 cents a day for three additional days, or at least to apply this modification or reduction to cars loaded with coal or coke for public service corporations.

"Primarily," says the Interstate Commerce Commission, "demurrage is imposed by a railroad to compel prompt loading and unloading of cars" (No. 933, decided April 10, 1908, p. 381). The demurrage charge of one

dollar a day is of universal application in this country, so far as we are advised. Its purpose is just as clear, viz., to exact an amount sufficient to enforce the release of a car, as the purpose of the petition before us is patent to so reduce the amount, viz., that the car would not be released at the end of the free period. The Commission is duly impressed with the importance of the service rendered by petitioner. It commends its prudence and foresight in providing, as it now does, sixty days' supply of emergency coal. But to grant the prayer of the petitioner, which is practically to store a supply of temporary emergency coal in the cars of respondents, would be to abrogate, to overrule, to annul all the theories, customs, practices and law with reference to this subject-matter now prevailing.

These questions have been before this Commission and have been carefully considered. In *Indiana Veneer Company v. Baltimore & Ohio Railroad Company et al.*, First Annual Report, p. 123, we said: "The cars are made for transportation, and not for warehouses. Neither the carrier nor the shipper, because the rights of other carriers and other shippers intervene, have any right to divert cars from transportation, except, of course, the usual necessary time to load and unload them. In this matter the public have rights paramount to those of any individual, and the business of the public carrier must be so conducted as to subserve the general interest and convenience."

And in *Indiana Bridge Company v. C., C., C. & St. L. Ry. Company*, No. 205 (not published), we construed subdivision (f) of section 3 of the Railroad Commission Act as follows:

"(f) The Commission shall enforce, as hereinafter provided, reasonable and just rates of charges for each railroad company subject thereto for the use or transportation of loaded or empty cars on its road; and may so enforce for each railroad, or for all railroads alike, reasonable rates for storing and handling of freight, and for the use of cars not loaded or unloaded within forty-eight hours after notice of arrival and placement for service, not to include Sundays or legal holidays.

"Now it will be noted that there are two distinct rights of different parties affirmed in this subdivision:

"First. That the Commission shall enforce reasonable and just rates of charges not for the shipper 'but for each railroad company subject thereto,' and this is obligatory on the Commission; it shall enforce these charges *for the railroad company*. We must construe these words in their obvious sense, and in view of the well-known condition of the scarcity of cars, and we must think that the General Assembly meant that its Railroad Commission should prescribe reasonable rates for the railroad companies in order to compel the loading or unloading of cars, in order to expedite the movement of cars for the benefit of other shippers and all shippers who needed them.

"Second. But this subdivision did not stop here. It provided also most important rights for the shipper. No rate or charge can be made against the shipper until forty-eight hours of free time has elapsed, and even then this forty-eight hours' period shall not commence to run until notice of the arrival of the cars has been given and placement of the cars has been made. As the General Assembly has so clearly limited the power of the Commission on this subject by thus defining what rights of the carrier

and shipper may be regulated by the Commission, the courts would set aside as being without authority any order made by us outside of these specific limitations of this part of the act."

Now, then, as we understand the facts, petitioner has room for five cars on its switch and consumes from three to five carloads of coal daily, finding no difficulty in unloading these cars in 48 hours. It proposes, however, to build an additional track, capable of holding from 10 to 15 cars. It desires to assemble on these tracks from 7 to 10 cars for temporary emergency purposes and hold these cars standing on this track for three days longer than the statutory free period of 48 hours, and to pay demurrage or rental or storage at the rate of 25 cents a day, or whatever sum the carriers charge each other for the use of cars under existing reciprocal per diem agreements.

If we clearly apprehend and define the situation we are asked to do something outside of our authority. We think that we are not permitted in this connection to consider comparative benefits or injuries. We think that we cannot impose any charge on the shipper for the car during the free period. We think that we cannot permit the carrier or the shipper to use the car for storage at any price, however small, however large. The only function of the car is transportation.

Aside from legal objections, which, however, are paramount in this case, it will not do, it is not right, to take a narrow view of car service conditions. Under normal traffic pressure there are hardly enough cars in the country to supply the public demand if all of them are kept moving, after 48 hours for loading and unloading, at the average daily mileage. As traffic expands it is only a short while when car surpluses are at an end, and instead distressing car shortages will harass carriers and shippers alike. The committee on car efficiency of the American Railway Association reports car surpluses as follows:

April 29, 1908	413,605
May 27, 1908	381,904
June 24, 1908	313,278
July 22, 1908	308,680
August 19, 1908	253,003
September 30, 1908	133,792
October 14, 1908	115,036
October 28, 1908	110,912

The chairman of that committee, addressing the recent meeting of the National Association of Railway Commissioners, in response to a question by a member of the Railroad Commission of Indiana as to future car supplies, said:

"As to what you ask, I have no special report. I only know from hearsay and the newspapers that very few of the railroads are building cars at all. I know as a general thing that cars are being scrapped right along. Cars are wearing out. Cars are being destroyed in wrecks. The total number of cars in the country has not increased the last six or eight months, and speaking personally I see no immediate increase in the number

of cars. The only chance for filling shortages, if shortages come, is in demanding those shop cars indicated on that diagram. Those are the only source of immediate relief."

There is a compensating advantage to shippers of a state whose railroad commission will not make rules hindering or staying the full movement of cars. Other things being equal, the carriers will furnish cars destined to or from points in such a state, if not altogether in appreciation of just and fair treatment, at least because such cars will be loaded and unloaded with proper dispatch and full service secured for them. We confidently expect such results in this State, and we know that at no distant day we shall realize such results for the great multitude of our shippers by reason of what may seem to be a denial of the most satisfactory service to individual shippers.

It is pertinent to state here that the Indiana Car Demurrage Bureau, through its manager and attorneys, has filed a petition with the Commission asking a modification of our affidavit rule No. 7, the proposed change requiring the agent to decline to receive affidavits if demurrage charges decided against the same affiant in other cases are unpaid.

We shall prefer to let this application continue until the special committee of the American Railway Association has made a final report on a uniform system of demurrage. Commissioner Lane, of the Interstate Commerce Commission, has been appointed to attend and take part in the conferences of this committee, and it is possible that its deliberations will result in rules that may be generally adopted and enforced throughout the country. Uniformity of practice will be of great benefit, both to shippers and carriers, because if the rules are uniform no partial rule applied in one or two or three states only, could give shippers in those states an advantage over the general shipping public, and such undue and unjust discriminations, whether or not legalized, would cease.

It is to be noted, also, that under the Commission's rules comparatively few complaints are now made. Nothing, indeed, like the volume of objection to demurrage charges that reached us before. If we have brought about a general feeling of acquiescence in car service rules and at the same time have so prescribed that the movement of cars and traffic is as rapid as is possible, we hesitate to attempt to better a condition so manifestly satisfactory, useful and necessary to all concerned.

It follows from what we have written that in this case we can have no question of our duty, and an order will accordingly be entered dismissing the petition.

No. 256. Vandalia Railroad, crossing Wabash Railroad at Lakeville, Indiana.

Application for approval of an interlocker at Lakeville, Indiana. Plans for same were filed by the interested roads, and referred to the Commission's consulting engineer for examination.

No. 257. Lake Shore & Michigan Southern Railway, crossing the Baltimore & Ohio Railroad at Millers, Lake County, Indiana.

Application for approval of an interlocker at Millers. Plans for same were filed by the interested roads, and inspection invited. The plant having been inspected by the Commission's consulting engineer, the plant was conditionally approved and ordered placed in operation from and after June 27, 1908.

No. 258. Thomas Paddock and John J. Rush, doing business under the firm name of Paddock and Rush Lumber Company, v. The Wabash Railroad Company et al.

This was a petition filed by the Paddock & Rush Lumber Company, asking that the respondent roads be compelled to put in effect a joint rate on cement from Stroh, Indiana, located on the line of the Wabash Railroad, to Frances, Indiana, located on the line of the Indianapolis Southern. The cause was heard, and after consideration the respondents were ordered to put in effect a joint rate of 9 cents per 100 pounds on cement between the points named. Subsequently the Wabash Railroad and the Indianapolis Southern filed petitions for rehearing, which were considered and overruled. The opinion filed in this cause and order thereunder were as follows:

OPINION.

DOWLING, Commissioner:

The petition seeks the establishment of a joint rate on the commodity in question. The present rates aggregate $10\frac{1}{2}$ cents per 100 pounds. The evidence shows the petitioners desire a joint rate, to be fixed at such a figure that they may compete in the cement trade with certain parties at Greenwood, Indiana. The petitioners now pay \$1.43 per barrel for cement f.o.b. Frances, on shipments from Stroh, which includes a transportation charge of 42 cents per barrel, but does not include a drayage charge for handling from Frances to Smith's Valley. Upon each barrel so handled they now make a profit of from 25 cents to 40 cents, and their business has been running about 4 or 5 cars per year, with 150 barrels to a car. At the present rates, their profit is therefore from \$37.50 to \$60.00 per car; and at the 9 cent rate, which is suggested by the petition, their profit would be \$9.00 additional per car.

Their Greenwood competitors pay, as petitioners are informed, 8 cents freight per 100 pounds, and a total of \$1.26 per barrel, f.o.b. Greenwood; securing their product from the Lehigh mills at Mitchell, Indiana. On each car the latter parties have the advantage over the petitioners to the amount of \$6.00 to \$8.00.

The difficulty which the Commission encounters in considering this application is, that we are not advised whether the disadvantage under which the petitioners labor is due to the rate at which their cement is

transported, or whether it is due to the price they are charged at the mills, or the price at which the Greenwood parties sell their cement. It may be that owing to the quantities purchased by the Greenwood competitors, or the business relationships existing between them and the Lehigh Company, they are enabled to secure their cement at a reduced figure; or they may sell at a smaller margin of profit than do the petitioners. If so, the Commission would not be justified in attempting to equalize the business conditions of these competitors by establishing a low joint rate whose effect would neutralize the advantage possessed by the Greenwood firm.

On the other hand, the tariffs on file with the Commission show that on shipments of cement from Stroh to Connersville the rate is 8 cents; to Columbus, 8 cents; to Greensburg, 8 cents; to Martinsville, 8 cents; to Shelbyville, 8 cents; to Franklin, 7 cents; while to points in the Southern section of the State, such as Seymour, Jeffersonville and New Albany, the rate is but 9 and 9½ cents; though the latter is probably affected by competition from the mills near Charlestown and Jeffersonville. From points in the extreme northwestern portion of the State, such as Hammond and Indiana Harbor, into the general territory wherein Frances is located, the rates run from 8½ to 9 cents.

Upon a survey of the entire situation, and a comparison of the combination rate in question with rates to territory south and southeast of Indianapolis, and especially the low rate of 7 cents from Stroh to Franklin, the Commission is of the opinion that the present combination rate of 10½ cents to Frances is unreasonably high, and should be reduced by such an amount as will make it more nearly correspond with rates on cement into points located in the same general territory.

An order will accordingly be entered, requiring the respondents to adopt a joint rate of not to exceed 9 cents upon shipments of Portland cement in carload lots from Stroh to Frances, Indiana.

OPINION ON PETITIONS FOR REHEARING.

DOWLING, Commissioner:

"The separate petitions for rehearing, filed in the above cause by the Wabash Railroad and the Indianapolis Southern Railroad, were heard by me on the 28th day of August, 1908, when counsel for the latter stated that a rehearing was desired for the reasons, (1) that the plant of the original petitioners had burned since the order for a joint rate was entered by the Commission; (2) that the joint rate of 9 cents per 100 pounds fixed by the Commission was too low, as shown by the fact that the connecting roads could not agree upon a proper division thereof; (3) the proportion which the connecting roads are willing to concede to the Indianapolis Southern is now remunerative to the latter; (4) the rate fixed by the Commission was erroneously based upon a comparison of rates charged by other roads in the State to various points therein, and such comparison is misleading in that these rates are nominal only, and practically no cement moves under them; and even if it did, the present case involves three connecting lines while the compared rates are those over the roads of two connecting carriers only; and furthermore the Indianapolis Southern is a new road running through new territory and relying largely on through

traffic, and therefore, ought not to be limited in its charges by what larger established lines collect.

"After hearing arguments of counsel and carefully considering the merits of these petitions I beg to report that in my opinion the same should be overruled, for the following reasons: (1) The burning of the original petitioner's plant has not affected their cement business and they are still selling that commodity. (2) The disagreement of the connecting carriers on a division of the joint rate is not necessarily indicative of its unreasonableness. If this disagreement cannot be satisfactorily adjusted, either road may ask that the Commission make the division. (3) While the comparison of rates was an important consideration with the Commission, it was a comparison with *existing* and published rates. Whether traffic actually moved thereunder is not very material, since these were the amounts fixed by the carriers themselves, at which they were willing to transport cement, and are available to any shipper who desires to use them. (4) The fact that the compared rates are those over two connecting lines only is not, in my opinion, sufficient to account for the decided difference between them and the rate heretofore prevailing over the roads involved herein; especially as in some instances this advantage is overcome by the greater distance the cement is hauled. (5) The fact that the Indianapolis Southern is a new road is a fact to be considered, but should not be controlling."

ORDER.

Come now the petitioners, and come also the several respondents in the above entitled cause, and evidence having been heard, and the Commission being fully advised in the premises, now finds as follows:

That the combination rate now charged for the transportation of Portland cement from Stroh, Indiana, located upon the line of the Wabash Railroad, to Frances, Indiana, located upon the line of the Indianapolis Southern Railroad, is 10½ cents per 100 pounds; that no joint rate exists for the transportation of said commodity between the points aforesaid, and that a joint rate of 9 cents for such transportation between the points aforesaid, over the several roads of the respondents, is reasonable and should be made by the respondents herein.

It is therefore ordered by the Commission, That the respondents enter into proper joint traffic arrangements whereby a joint rate of 9 cents per 100 pounds shall be put in force for the transportation of Portland cement over their lines, in carload lots, from Stroh, Indiana, to Frances, Indiana; and that such rate shall be in full force and effect on and after the 6th day of August, 1908.

It is further ordered by the Commission, That this order shall become effective on the 6th of August, 1908, and that the same shall continue in effect for two years next thereafter.

It is further ordered by the Commission, That the Secretary deliver to the superintendent of each of the said respondents a duly certified copy of this order and the opinion of the Commission concerning the matter herein determined, and that the same be delivered by registered United States mail.

All of which is ordered by the Commission.

No. 259. A. F. Schuler et al. v. Cleveland, Cincinnati, Chicago & St. Louis Railway Company.

This was a petition filed by A. F. Schuler and other residents of the town of Fairland, praying an order of the Commission requiring the construction of a new depot at Fairland, Indiana. The cause was heard informally at Fairland, a report submitted and an order made, directing the respondent to repair and alter its present station building in accordance with the recommendation of the Commission. The work is completed and approved by the Commission. The report is as follows:

REPORT.

DOWLING, Commissioner:

The hearing in the above entitled cause was held pursuant to notice on July 22, 1908, at the station building of the Big Four Railway at Fairland, Indiana. The petitioners were represented by A. F. Schuler, and the respondent by Hon. Frank L. Littleton. Evidence was offered by both petitioners and respondent, an abstract of which is attached hereto.

I made a personal examination of the premises and found that at present the main station building consists of a one-story, frame structure, about sixty feet long and twenty feet wide, with three rooms, the largest of which, about seventeen feet square, located at the eastern end of the building, is used for a waiting room; the middle room, about twelve by twenty feet, is used for a ticket office and telegraph operator's room, and the west enclosure, fourteen by twenty feet, is the freight room. The waiting room has two openings leading out of doors, and four large windows. The floor of this room is old and uneven; the benches provided for seating of passengers are of antiquated design, and are much in need of cleaning and revarnishing. The ceiling and walls are wooden, and extremely dirty; the walls especially showing scratches and other marks. The roof sags perceptibly. There is no drinking water provided for intending passengers. The only means of lighting the room at night appeared to be a small bracket, coal-oil lamp, which, at the time of the hearing, was without a chimney. The windows do not run on weights, and the transoms of the doors are immovable.

The middle room presents substantially the same appearance as the waiting room. The floor is in somewhat worse condition, and the ceiling is broken through in one place. The room is dark and dingy. Steps lead from this apartment to the freight room. These steps are small and inconvenient, and are liable to cause an accident to persons using them.

The freight room is a bare, unsealed room, with a stout, wooden floor, and wooden walls composed of heavy, rough boards. The ceiling is unfinished, the entire rafters being exposed. At the west side there is a large crack between the boards. In one corner of this room is a small closet, wherein are stored books, papers, and miscellaneous articles, including a quantity of packing, such as is used in the wheel boxes of railroad cars. The accumulation of this inflammable material is a source of danger to the station building.

The exterior of the depot is extremely unsightly. It was originally painted yellow, but is now dark and discolored by age and dirt. The roof is covered with tar paper, and is unsightly. The lettering upon the outside of the building is not clearly legible, on account of the general dingy appearance of the walls.

There are separate closets provided for men and women. At the date of the hearing they were in tolerably good condition. However, the ceiling of the women's closet was defective, and the entire structure showed the need of repainting inside and out.

The station building sits flat upon the ground. There is a narrow area, composed of cinders, between it and the tracks. Immediately in the rear are tracks used for handling freight cars, which are about sixteen feet from the south side of the station. On the east there is a very considerable space, toward which the station could, if necessary, be extended.

Upon all of the evidence and from my personal examination of the premises, I beg to offer the following recommendations:

First. That the railway company be requested to relocate and repair its present station building, in accordance with the plans submitted by it to the Commission at the hearing.

Second. That in addition thereto, the railway company be directed to square up the ceiling of the east room, provide sufficient ventilation of the waiting room, change the window sashes so that they will run on pulleys and weights, provide the station with drinking water for the use of patrons, paint it inside and out, lay new floors in the waiting and middle rooms, and place the entire building in first-class repair.

Third. That the water closets be thoroughly cleaned, the rooms painted inside and out, and repaired, the vault cleansed, and a new roof placed upon the entire structure wherein these closets are located.

ORDER.

"The petition in the above entitled cause coming on for hearing, evidence being introduced, and the Commission being fully advised in the premises, now finds that the prayer of said petition, so far as relates to requiring the erection of a new depot building by the respondent at the town of Fairland, should be denied; but that the respondent should be required to relocate and repair the building now used by it as a freight and passenger station at said place.

It is accordingly ordered by the Commission, That the respondent relocate and repair its present station building, in accordance with the plans and blue prints submitted to the Commission at the hearing of this cause; that in addition thereto it raise to a level the ceilings of the rooms of said depot wherever they now sag or are out of line; that it provide sufficient ventilation for the waiting room; change the window sashes throughout the building so that they may be easily raised and lowered; provide the waiting room with an ample supply of good drinking water for use of patrons; paint the depot inside and out, lay new floors in the waiting room and ticket agent's room, clean and revarnish the seats in the waiting room; provide new doors for the building, and place the entire structure in first-class repair. That in addition thereto the water closets shall be thoroughly cleaned, the rooms painted inside and out and repaired; a new

roof placed upon the building wherein the same are located, and the vault cleansed; that all of said repairs and alterations be begun at once and prosecuted to completion with the least possible delay, and when completed report same to the Commission for inspection and approval.

"All of which is ordered by the Commission."

No. 260. Wabash Railroad, crossing Pere Marquette Railroad at Magee, Indiana.

Application for approval of interlocker at Magee, Indiana. Plans being filed, the same were referred to the Commission's consulting engineer; and on his report coming in, the plans were disapproved. Subsequently other plans were filed and approved, subject to conditions specified by the Commission.

No. 262. T. M. Tomlinson et al., application for the relocation of the subway crossing of the Big Four Railway, near Big Eagle Creek, Indianapolis, Ind.

The petition in this cause was filed with the Commission; no further steps being taken, as the Commission entertained doubts respecting its jurisdiction of the controversy.

No. 263. Indiana Union Traction, crossing Cleveland, Cincinnati, Chicago & St. Louis Railway Company, and Central Indiana Railway Company, east of Anderson, Indiana.

Application for approval of interlocker at a point east of Anderson. The plans and petition were referred to the Commission's consulting engineer for examination and report. Upon his report coming in, said plans were approved. Later the plant was examined and approved, October 8, 1908.

No. 264. The Chicago, Lake Shore & South Bend Railway, crossing Elgin, Joliet & Eastern Railway, near East Chicago.

Application for approval of interlocker near East Chicago. The plans filed were referred to the Commission's consulting engineer, whose report, approving the same, was concurred in by the Commission, and the plant ordered to be constructed accordingly.

No. 265. Deere & Co. v. Indianapolis Union Railway Company.

This was a petition filed by Deere & Co. concerning the location, construction and maintenance of a switch from the petitioner's plant in Indianapolis, to the respondent's line. The matter having been orally argued by counsel and briefs submitted, the same was taken under advisement. The petitioner requests that the matter be allowed to stand for the present, without final decision.

No. 266. Baltimore & Ohio Railroad, crossing Lake Shore & Michigan Southern, at Clark's Junction.

This was an application for the approval of a temporary interlocker. Plans having been filed, and the plant being inspected by the Commission's consulting engineer, and reported upon, the plant was approved by the Commission as a temporary plant. Subsequently plans for rearrangement of signals, etc., were filed.

No. 268. Indiana Union Traction, crossing the Cleveland, Cincinnati, Chicago & St. Louis Railway east of Winchester, Indiana.

Application for approval of an interlocker east of Winchester. Plans. A petition having been filed, and referred to the Commission's consulting engineer, and the latter's report coming in, said plans were approved. Later the consulting engineer filed his report of inspection.

No. 269. Evansville Furniture Manufacturers' Association v. Baltimore & Ohio Railroad Company and thirty-six other roads.

This was a petition filed by the Evansville Furniture Manufacturers' Association, praying an investigation of the classification of folding beds as practiced by railroads doing an intra-state business within Indiana. The cause was heard at Evansville and was taken under advisement.

No. 270. Evansville Furniture Manufacturing Association v. Baltimore & Ohio Railroad Company and thirty-six other roads.

This was a petition praying an investigation of the classification of folding beds by carriers doing interstate business. The evidence was heard at Evansville and the cause was taken under advisement by the Commission.

No. 271. Romona Oolitic Stone Company v. Chicago, Indianapolis & Louisville Railway Company, Baltimore & Ohio Southwestern Railroad Company, and Bedford Stone Railway Company.

This was a petition filed by the Romona Oolitic Stone Company, alleging a violation of the rebate law of Indiana by the respondent railways. The matter has been continued, pending further action by the petitioner.

No. 272. Elgin, Joliet & Eastern Railway, crossing Michigan Central Railroad, Chicago & Erie Railroad and Grand Trunk & Western Railroad at Griffith, Indiana.

Application for approval of an interlocker at Griffith, Indiana. Plans being filed and referred to the Commission's consulting engineer, upon the latter coming in, said plans were disapproved. Subsequently the plans were resubmitted, with a report of the Commission's engineer, and the same were approved by the Commission.

No. 273. Cleveland, Cincinnati, Chicago & St. Louis Railway Company v. Town of Carbon, Indiana.

This case comes to the Commission on an appeal from the town board of Carbon, Indiana, by the above named Cleveland, Cincinnati, Chicago & St. Louis Railway Company, said appeal being taken under the provisions of section 1 of an act amending section 31 of an act entitled "An act concerning municipal corporations," approved March 1, 1905, and conferring certain powers and duties on the Railroad Commission of Indiana, providing penalties, and repealing all laws in conflict therewith. On the first day of September, 1908, the aforesaid town board of Carbon, Indiana, passed an ordinance providing that the railroad crossing at Poplar street, commonly called Main street, in said town of Carbon, was hereby deemed, held and declared by said board of trustees to be dangerous and required a watchman thereat to promote safety; said ordinance also provided specifically that the Cleveland, Cincinnati, Chicago & St. Louis Railway Company, which is a railroad corporation operating and owning a railroad within the town of Carbon, Indiana, be required to keep a flagman at the railroad street crossing formed by the intersection of its tracks at Poplar street, commonly called Main street, and within such town limits such crossing being deemed dangerous and held so to be by the board of trustees of said town—such flagman to be some competent person. Penalties were provided for the violation of this ordinance in accordance with the statute, and it was ordered that the same become effective on the fiftieth day from the time of notice of the adoption of said ordinance, should be served on the railroad company, or the persons affected by the same, in a manner required by law, and ten days after its publication in the Carbon Chronicle. The Cleveland, Cincinnati, Chicago & St. Louis Railway Company appealed to the Commission and asked that such ordinance be overruled and set aside for the following reasons:

First. That said ordinance was void for the reason that a flagman was not reasonably necessary at said crossing to protect persons traveling upon said street; that ample protection could be afforded to the traveling public, using this crossing, by the erection and maintenance of electric warning bells, or by the erection of warning signs; that the tracks of said railroad company were straight in both directions from said crossing and that any one exercising ordinary care could use such crossing without danger of being injured; that to require a flagman at said crossing would impose upon said railroad company great and unusual burden; that the said ordinance was void for uncertainty and indefiniteness; that the said town did not have a population of more than 700 inhabitants according to the last preceding United States census at the time said ordinance was adopted. This appeal was heard at the town of Carbon, Indiana, by the Chairman of the Commission, at 2 o'clock p. m., September 25, 1908. Hon. Frank L. Littleton, attorney, and Hadley Baldwin, division superintendent, representing the railroad company; T. T. Jones, W. R. Owens, W. N. Siner, representing the members of the town board and officials of the town of Carbon. The evidence shows that the population of the town of Carbon is about as shown by the last preceding United States census, which was 951; that the Big Four Railroad had a double track through the town of Carbon; that no accident had ever occurred at the crossing in question because of the absence of a flagman; that the tracks of the railroad company were straight in both directions from said crossing and that cars can be seen for a considerable distance in either direction.

After hearing the evidence in the case and discussing the matter with the members of the town board of Carbon, Indiana, the conclusion was reached that the Commission would not be warranted in requiring the railroad company to maintain a flagman at this place. For the reasons set out in the first three paragraphs of the appeal of the railroad company, i. e., that a flagman was not reasonably necessary at said crossing to protect persons traveling upon said street; that ample protection could be afforded to the traveling public by the erection and maintenance of electric warning bells; that the tracks of said company are straight in both directions from said crossing, and that any one exercising ordinary care can use said crossing without danger of being injured. These matters were explained to the members of the town board and the suggestion was made that a loud sounding warning bell be placed in a prominent location would probably furnish all the protection needed

at this crossing and it was agreed that this arrangement could be made by the Commission. The Commission then requested the railroad company to put this crossing in the best possible condition and erect a loud-sounding warning bell in a position where it could be seen and heard by persons approaching the crossing from any direction. We are advised that this request of the Commission has been complied with and the matter is, therefore, closed.

No. 275. Crawfordsville Shale Brick Company et al. v. C., I. & L. Railway Company.

Petition filed September 26, 1908. Pending.

No. 276. Toledo, St. Louis & Western R. R., crossing the Chicago & Eastern Illinois Railroad at Veedersburg.

This was a petition filed to secure modification of plant at Veedersburg, Indiana. The same being referred to the Commission's consulting engineer and the latter's report being filed, the plant was approved by the Commission and an order issued authorizing the running of the crossing October 27, 1908.

No. 277. Louisville & Southern Indiana Traction Line, crossing the B. & O. S. W. Railroad, between New Albany and Jeffersonville.

The plans having been filed and referred to the Commission's consulting engineer, were disapproved, pursuant to his recommendation.

No. 278. Chicago & Eastern Illinois Railroad, crossing Lake Erie & Western Railroad at Oxford, Indiana.

Plans filed and referred to the Commission's consulting engineer, who subsequently filed his report. The Commission thereafter approved the plans and plant, subject to conditions named in the engineer's report.

No. 279. Lake Shore & Michigan Southern Railway, crossing the B. & O. Railroad and the Chicago Terminal Traction Railway at Pine, Indiana.

Plans for interlocker filed and referred to the Commission's consulting engineer.

No. 282. In re Railroad Convention.

For full report of the proceedings of this convention see *infra*.

No. 283. W. H. Etter v. Indianapolis Southern Railway.

Petition for the establishment of a passenger and freight station at Providence, Indiana. The matter was heard at the latter place and taken under advisement.

No. 284. Lake Shore & Michigan Southern Railway crossing B. & O. Railroad. Chicago, Lake Shore & Eastern Railroad and the Indiana Harbor Belt Railroad at Indiana Harbor.

Petition filed for interlocker at Indiana Harbor, and referred to the Commission's consulting engineer. The latter reported favorably upon the plans, which report was approved by the Commission.

No. 285. Pennsylvania Lines crossing Ship Canal drawbridge at Indiana Harbor.

Plans for interlocker filed and referred to the Commission's consulting engineer.

No. 286. Slider v. C., I. and L. Ry. This is a complaint by Edward T. Slider against the C., I. & L. Railway Company, charging that the rates from New Albany to points north on the line of respondent's road for coal, sand and gravel are excessive and unjust, and asking that the Commission fix reasonable rates therefor. The respondent has entered its appearance, and the matter is set for hearing on January 12, 1909, at Indianapolis.

APPENDIX III.

Informal Proceedings.

INFORMAL PROCEEDINGS.

No. 143. Inquiry Concerning Express Rates, Practices and Discriminations.

Since our last report on March 24, 1908, the Commission rendered its opinion and made its order in this case. Soon after the order was issued the express companies commenced suit in the United States Circuit Court praying for a preliminary injunction against the Commission. The counsel for the Commission appeared and protested against the granting of an injunction on the ground that the Commission had not proceeded in the State courts as required by the Railroad Commission act to fix the rate and enforce the order. The Circuit Court, however, granted the injunction. Later, on the authority of the opinion of the Supreme Court of the United States in the Virginia passenger rate case, rendered November 30, 1908, the Commission filed a motion through its attorneys, Miller, Shirley & Miller, to dissolve the injunction. This motion was overruled.

Since the Commission rendered its opinion in this case, in June, 1908, the Supreme Court of the State rendered an opinion in the case of the Railroad Commission of Indiana against the Adams Express Company et al., and on October 30, 1908, the petition for a rehearing in this case was overruled by the Supreme Court of Indiana. The effect of this decision on the findings and the conclusion of the Railroad Commission with reference to the findings marked 2 and 3 on page 44 of the opinion, is, in the opinion of the commission, practically to annul the same, and also inasmuch as the reductions in the rate made by the Commission was based on the obligation of the express companies to take up packages and to make personal delivery of the same, the Commission has found it necessary to modify its order of March 24, 1908, to the end that the same may conform to the law as expressed by the Supreme Court of the State in the opinion above cited. Accordingly the Commission is now about to call before it the representatives of the express companies in order to hear them upon such modification or change in the order as will seem to be necessary under the law as now announced by the Supreme Court. The opinion and order of the Commission are as follows:

STATE OF INDIANA.

RAILROAD COMMISSION OF INDIANA.

No. 143. Inquiry Concerning Rates, Discriminations and Practices of Express Companies in the State of Indiana.

Whereas, Information and complaints have reached the Commission that the rates and earnings of express companies are excessive and unreasonable; that some of the companies make rates to one point and refuse to make to other points reached by them; that deliveries are not made uniformly, as required by law, and that other practices and discriminations prejudicial to shippers are carried on; and

Whereas, It appears that the express traffic and business throughout the State are affected, and that these matters are of such general public interest as to require investigation by this Commission.

Therefore, it is now ordered by the Commission, That an inquiry, as above entitled, be and the same is now instituted by this Commission.

It is further ordered, That this inquiry and investigation shall embrace the following:

1. Are express rates between points in this State unreasonable and excessive, and if so, to what extent, and how much should they be reduced by the Commission?
2. What are the contracts between express companies and railroad companies, and do these contracts constitute an unjust charge and preference of shippers by express, against other patrons of the carriers?
3. What is the value of the property of the express companies used in the conduct of their business in this State?
4. Do the express companies deliver without charge throughout the corporate limits of the towns and cities of this State, as required by law?
5. Is there any undue discrimination as between localities?
6. Is there and undue discrimination as between persons?

It is further ordered, That all the express companies doing business in the State of Indiana be and are hereby made parties to this proceeding.

It is further ordered, That a hearing be held at the hearing room of the Commission, Room 85, State House, October 16, 1907, 10 o'clock a. m., to continue from day to day until disposed of, and that the secretary cause a certified copy of this order of the Commission to be served on all said express companies twenty days before the date of such hearing.

1. "The power to fix rates and charges for transportation is an attribute of sovereignty, because in operating a public highway a transportation corporation exercises the power of the sovereign."

2. "This power over public highways constructed for public use to accommodate public travel and secure public convenience is a matter of public concern and is absolutely essential to government."

3. In requiring the carrier to furnish minute details of its business, "the government exercises the power to visit the corporation engaged in such business, which power is inherent in the sovereign, and has always existed among civilized nations."

4. Railroad companies must furnish the public with reasonable express facilities, but they owe no duty to the public as to the particular agency

they shall select. They may do the business themselves, as it is well, safely and cheaply done in Germany and England by the railroad companies, or they may make special contracts with such express companies or agents as they desire to select. They may choose their own appropriate means of carriage.

5. Express companies thus selected are common railroad carriers, with the characteristic function of pick-up and delivery and certain other accessorial duties. They perform an essential part of railroad transportation, and to such extent are bound by the railroad corporate subjection to governmental visitation, and so also to the extent to which they operate on the public highways they are bound by the power of the State over public highways. They can not escape these obligations by failing to incorporate.

6. Express companies are common carriers by virtue of the prescription of the statutes of this State. They are held, in this State, with great strictness, to their characteristic function of speedy collection and delivery. Hence, it is not competent nor lawful for such companies, as they frequently do, to make charges and rates for such special service and then fail or refuse to perform such service.

7. The law having prescribed for railroad companies the obligation of making joint tariffs and of interchanging with each other all business at junction points, the same obligation is imposed on express companies as to the railroad business done by them, to make reasonable joint tariffs and to interchange business with other express companies.

8. The general Railroad Commission Acts of Indiana apply to express companies. The Railroad Commission, by virtue thereof, has the power to supervise the operation and practices of these companies, to prevent extortion and discrimination by them, and to fix their rates and charges, and to require them to make reasonable joint rates and to interchange business with each other.

9. The rates generally charged by express companies for services in the State of Indiana are excessive and unreasonable.

10. The history and development of such companies shows a wonderful increase of business without any corresponding reduction of rates. The contracts of such companies with the railroad companies criticized.

11. In this failure generally to do the pick-up and delivery service, for which they charge, and were organized to do, and specially in fixing arbitrary pick-up and delivery limits, in contravention of statute law, in towns and cities of more than 2,500 inhabitants, express companies are guilty of continual discriminations.

12. This is a government of laws. Express companies have often failed or refused to obey the laws of the State. These wrongs to the body politic condemned and the power of the State applied to compel these companies to respect and obey the laws.

APPEARANCES :

For the Commission—

Messrs. Miller, Shirley & Miller, special counsel.

For the Respondents—

Mr. Edward Daniels, counsel for Adams, American, United States and Pacific Express companies.

- Mr. J. Zimmerman, superintendent traffic; Mr. J. D. Curtis, superintendent, Adams Express Company.
- Mr. F. C. Fargo, superintendent; Mr. H. C. Bradley, general traffic manager, American Express Company.
- Mr. C. C. Loop, vice-president, Southern Express Company.
- Mr. Carl Wood, counsel Southern Indiana Express Company.
- Mr. T. B. Stebbins, superintendent tariffs; Mr. J. P. Daniels, assistant general superintendent; Mr. J. A. Brewster, auditor; Mr. N. C. Thaxton, chief rate clerk, Pacific Express Company.
- Mr. C. W. Stockton, assistant to president; Mr. J. B. Ludlow, traffic manager, Wells-Fargo Express Company.
- Mr. M. P. Jones, superintendent traffic, United States Express Company.

• Wood, Commissioner :

There is nothing more firmly established in law and in fact than the obligation of express companies to take up and to make personal delivery of packages. This is the purpose and reason of their existence. Formerly common carriers generally were bound by this duty, and in England the practice has continued to this day, and railroad companies take up and deliver small parcels of freight and the railroad rate includes this service. Exceptions were made where it was impossible to perform the service. Said Buller, Justice, in *Hyde v. The Trent & Mersey Nav. Co.*, 5 T. E. 397: "A ship trading from one port to another has not the means of carrying the goods on land; and according to the established course of trade, deliveries on the usual wharf will discharge the carriers." And this exception was also applied to transportation by railroads, because "The car can not leave the track or line of rails on which it moves." But these very exceptions caused public convenience to demand an agency to perform a transportation function so necessary; and railroad companies must provide express facilities (which includes the additional service of pick-up and delivery) to be carried on either by themselves or their agents. The Express Cases, 117 U. S. 13. And, whenever invention improves the system of transportation, the general demand for personal delivery of small or valuable packages prevailed, and the expressman took over from the land railway or the waterway this part of their business, the actual personal delivery, and assumed it, bound by its character function, the absolute obligation to make personal delivery to the consignee.

The law on this subject is so clearly expressed in the leading textbook on the Law of Carriers that we quote Hutchinson on Carriers as follows :

"Sec. 716. (397) Express Companies Required to Make Personal Delivery.—Express companies may be said to owe their origin to this modification of the law in regard to the delivery of goods in favor of water carriers and railway companies. Depositing in warehouses, whether with or without notice to the consignee or owner, with the requirement that he should call for them, was found to be unsuitable for the carriage of small and valuable parcels, as well as troublesome to the consignee. To avoid this inconvenience, as well as to secure greater safety and dispatch in the transportation and delivery of valuable packages, carriers who undertook

to make delivery to the consignee personally, although their lines of travel might be identical with those of the water carrier and the railroad carrier, and even though they might employ the vehicles of these carriers to effect the transportation, became necessary. This necessity was supplied by what are known in this country as express companies, which undertake to carry goods of that class, and to make a personal delivery of them to the consignee; and to this public profession they are held by the law with great strictness."

And we quote also from some of the leading cases :

"It is the settled doctrine of England and of this country that there must be an actual delivery to the proper person at his residence or place of business and in no other way can he discharge himself, except by proving that he has performed such engagement or has been excused from the performance of it or has been prevented by the act of God or the public enemy. It is necessary in order to give due security to property that this rigid rule should obtain and it has for years been enforced against common carriers." *Baldwin v. American Express Co.*, 23 Ill. 120.

"An express company is not only required as a common carrier to transport the goods to the place of destination, but the further duty is enjoined upon it to deliver the goods to the consignee at his residence or place of business." *A. M. U. Ex. Co. v. Wolf*, 79 Ill. 430.

In *Packard v. Earl*, 113 Mass. 280, the court below charged the jury that express companies are common carriers, and as a general rule are held to the duty of personal delivery. The exception to this charge was overruled by the Supreme Court.

"Carriers by land are bound to deliver or tender the goods to the consignee at his residence or place of business, and until this is done they are not relieved from responsibility as carriers. Carriers by vessel, boats and railways are exempt from the duty of personal delivery. Such carriers discharge themselves from responsibility as such by transporting the goods to their nearest business station, to the residence or place of business of the consignee, and notifying the consignee of their readiness to deliver the goods at such station. But this exemption does not extend to express companies, although availing themselves of carriage by rail. These were established for the purpose of extending to the public the advantages of personal delivery enjoyed in cases by land carriers prior to the introduction of transportation by rail." *Wilbeck v. Holland*, 45 New York, 13.

"We think the sound rule to be a personal delivery either to residence or place of business of the consignee. Any other rule would be destructive of the business of express companies who receive a larger compensation because they contract for a personal delivery of goods entrusted to them as common carriers." *Express Co. v. Robinson*, 72 Pennsylvania State 274.

The authority most often quoted on this subject is Judge Redfield. He most forcibly said: "In turning our attention more especially to the responsibility of express carriers, the first consideration distinctive of this mode of transportation is that they are bound to deliver parcels to the person to whom they are addressed. Since the introduction of railways, carriers in this mode have been exempted from personal delivery of their par-

cels and allowed to deposit them in warehouses and thus exonerate themselves from the longer continuance of their responsibility as carriers. But the great necessity of having express carriers arose from this defect in delivering goods by the ordinary railway transportation and the same defect existed in regard to the delivery of goods transported by steamboats. They could only deliver at wharfs and were not expected to employ special messengers and porters to deliver their goods. But it was to remedy the inconvenience and restore the carrying of business by land to its former state in some degree that express companies have come into use with the distinctive character of making personal delivery of their parcels to the consignee. This has been so often decided that it is scarcely required that any considerable number of cases should be cited." 55th Barber 443.

In the last case we can find on this subject, *Hutchinson v. U. S. Express Company*, 59 S. E. 949 (W. Va., 1907), the well-established doctrine is repeated: "By the general rule of law express companies are required to deliver the goods to the consignee at his residence or place of business. The duty of carriage is not terminated at the station or agency to which they are directed. The duty of carriage continues beyond this point to the residence or place of business of consignee." Citing *Hutchinson on Carriers*, Sec. 716.

"The greatest part of the express business is received away from the office of the express company and delivered in the same manner, and very little express business is either brought to the office of the company and delivered to them at such place, or accepted by the carriers at the office of the company." Brief of Vice-President Stockton, Wells, Fargo & Co., in this case, p. 10 of brief. (By the way, this company, W., F. & Co., claims to make free deliveries in all towns of 2,500. If it does it is entitled to due credit for the same.)

The holdings of the Indiana courts are stronger than those of the courts of other states with reference to these obligations of the express companies. As early as 1865, in *Bensemer v. T. & W. Company*, 25th Ind. 135, the Supreme Court of Indiana declared in accordance with the general doctrine: "As a general rule, common carriers by wagon are required to deliver the goods to the consignee at his house or place of business, and their liability as such continues until such delivery is made."

In 1868 the American Express Company undertook to transport one hundred dollars from Chillicothe, Mo., to Anderson, Indiana, to one Hockett. (30th Ind., 150.) On its arrival the company mailed a notice to Hockett and deposited the package in their safe. Several days afterward the safe was broken into and the money stolen. The answer of the express company averred that the agent could not find the residence of the consignee to be in town, but because the answer failed to allege that the agent made diligent inquiry to find the residence of the consignee it was held insufficient. In this case the law is clearly declared and express companies are held to the specific duty of delivery with great strictness. "As a general rule," said the court, "common carriers by land are bound to deliver the goods to the consignee at his residence or place of business." Again in 1869, in *Adams Express Company v. Darnell*, 31st Ind. 20, it was held that personal delivery of the package was one of the duties of the carrier.

Before quoting further Indiana decisions we wish to advert to the will

of the people of the State with reference to the duty and obligation of these companies as expressed in their legislation. As early as 1855 express companies were declared to be common carriers in an act approved March 5, 1855, section one of which reads as follows:

"Section 1. Be it enacted by the General Assembly of the State of Indiana, That all persons, association of persons, or companies, usually called express companies, regularly engaged or hereafter to be engaged in the business of carrying or transporting packages or parcels of bank notes, coin, merchandise, or other articles, over or upon any of the railroads, rivers, canals, or other thoroughfares in this State, and receiving, or agreeing to receive, compensation for such services, shall be, and they are hereby declared common carriers, and shall be subject to all the liabilities to which common carriers are subject according to law."

It is significant to show the intention and purpose of the act that it was passed at the time express companies were being organized for the purpose of supplying the place of common law carriers by land for taking up and delivering packages.

The act provided also, section two, that these companies should file in the office of the recorder of each county in which they did business, the recorder to make record and publication of the same, a statement showing the names of their members, the residences of such members, and the amount of capital employed in the express business, and an agreement that process might be served on their agents. The act also provided that railroad companies and steamboat companies should not be exempt from liability in case of loss or damage, because they were engaged in the conveyance of the messengers or agents of said express companies. Session Acts 1855, p. 99.

The general assemblies continued the regulation of these companies. In 1877 the assembly forbade, under a penalty, the transportation of game out of the State killed in violation of the game laws. In 1881, and subsequently, a better scheme of taxation was imposed, and reports to the auditor were required to be made.

In 1879 an emergency act was passed "in relation to foreign express companies, defining their duties and providing penalties." This act, Session Acts of 1879, p. 146, again prescribes that all such companies, whether incorporated or not, are common carriers. Again, they were required to file statements with the county recorder, setting out their names and residences, and the amount of capital, and an agreement providing for suits and processes and judgments in the courts of this State. Again they were forbidden to do business or bring suit without complying with the act.

In 1883, for the third time, express companies in "An act regulating the transaction of express business by express companies in the State," were formally defined as common carriers, and money received for shipment must be counted, the amount recorded and a receipt given, which should be conclusive evidence in a suit for the amount claimed. Acts of 1883, p. 107.

In 1901 state regulation was more imperative. Two acts of the greatest importance were passed, and it is notable that one required express companies to discharge their duties to consignors, that is to say, their pick-up obligation, and the other prescribed their duties to certain consignees,

that is to say, their obligation to deliver. The first section of an act in relation to express companies, defining their duties as to consignors, prohibiting discriminations, etc., is as follows:

"Burns.—3312b. Equal Terms, Schedule of Rates.—1. That all partnerships, associations of persons, individuals, joint stock associations, corporations, or companies, usually called express companies, now engaged, or that may hereafter engage in the business of carrying or transporting money, merchandise or other articles, over, or upon any of the railroads operating in this State, and receiving or agreeing to receive compensation for such services, shall grant to each and all consignors, including other responsible express companies as consignors, equal terms, facilities, accommodations and usages, in the receipt, carriage, continuance of carriage and delivery of money and property usually carried by express companies, and they are prohibited from granting to any one carrier, class or combination of carriers, any terms, credit, privileges, advantages, usages, accommodations or facilities in the receipt, transmission or delivery of express matter that they do not grant to all others, and the granting of any credit, privileges, terms, usages, facilities or advantages to any one person, carrier, company or combination or class of companies, carriers or persons that are not granted to all other responsible carriers or persons shall be, and is hereby declared unjust and unlawful discrimination. And every carrier of express matter shall at each office and station where it receives, forwards or delivers money or property of any kind keep a printed schedule of its rates and charges, which shall at all times be open for public inspection."

The act concerning the delivery of express matter, that is to say, defining the duty of express companies as to consignees, is as follows:

"Burns.—3312a. Delivery of Packages.—1. That all express companies doing business within the State of Indiana shall deliver all express matter to all persons to whom the same is directed, living within the corporation limits of cities within the State having a population of twenty-five hundred or more inhabitants, according to the last preceding United States census, and any express company failing to deliver such express matter shall be fined in a sum not to exceed one hundred dollars, or less than ten dollars, for each and every offense."

These acts are regulative in a high degree. By the first express companies were required, under penalties, to provide equal terms of credit, facilities, advantages and accommodations to all consignors alike. They were forbidden to make any contract or combination hindering competition. They were required to file a statement with the Secretary of State showing the amount of capital stock, if a corporation, and if a partnership the gross amount contributed, or paid, to such partnership to be used as capital in carrying on their business, and it was made unlawful for them to do business without having made such statement and paid the substantial fees required by the act, and prosecuting attorneys were required, if these companies violated any of the provisions of the act, to proceed against them for penalties and to forfeit their rights and privileges to do business in the State.

And especially it is to be noted that for the first time in the history of the State these companies were required to keep at their offices and

stations a printed schedule of all their rates and charges, open at all times to public inspection. Burns, sections 3312b, c, d, e and f.

The second of these acts, the delivery act, did not become the law without full consideration by the assembly. We find from the original papers and records in the state library that the bill was introduced early in the session, January 15, 1901, being House Bill No. 41, by Mr. Clark, of Marion county. The original typewritten bill provided that deliveries should be made in cities of five thousand inhabitants, but the word "five" was stricken out before the bill was introduced, and "two thousand" substituted therefor. The bill in the House was referred to the committee on corporations, reported favorably, amended by striking out the second section, amended as to the title and passed the House January 28th, ayes 81, noes none. The Senate referred the bill to the committee on corporations, who struck out the words "two thousand" and inserted "three thousand," and made a minority report that the bill be indefinitely postponed, signed by Senator Johnson. This report was not concurred in. The majority report for the passage of the bill, signed by Senators Thompson, Lambert, Crumbaker, Fleming, Burns and Fortune, was concurred in. On the passing of the bill in the Senate it was further amended on motion of Senator Keyes by striking out "three thousand" and substituting "twenty-five hundred," and in this form the bill passed, and the Senate amendment was concurred in by the House and the bill was approved March 7, 1901, and became the law.

In 1905, chapter 47, Acts 1905, the General Assembly provided that in all actions against common carriers, and express companies are common carriers by statute, it shall be sufficient for the shipper to aver and prove in the first instance delivery to and receipt by the carrier and failure to transport or *deliver*.

And in 1905 the General Assembly reached the climax of regulation of these carriers, chapter 53, Acts of 1905, section 21, by creating a Railroad Commission and giving to this Commission the same powers over express companies that it could exercise with reference to all other common carriers. The act of 1905 was amended, revised and greatly enlarged and extended by the Railroad Commission Act of 1907, chapter 241, Acts of 1907, under which the proceedings in this cause have been instituted. Also in 1907 shipments of intoxicating liquors, chapter 16, section 10, of said acts were regulated. And the Railroad Commission Act of 1905 has been held to be constitutional. *Southern Railway v. Union B. Hunt et al.*, Appellate Court of Indiana (1908), in MSS.

If these public utility corporations and associations had complied with their obligations would all this legislation have been necessary? In the very first act, that of 1855, they are declared to be common carriers and were charged by the clearest legal definitions, constructions and principles with the obligation of carrying at reasonable rates and taking up and delivering the packages confided to them. In this various legislation evasions of law as to suits by or against them are prohibited, discriminations mentioned, rates required to be published, the idea of excessive rates being involved, and a part of their receipts required to be paid back to the State in fees, taxes and penalties, and criminal penalties imposed, as if the

State had concluded that these companies must be forced and not merely directed to obey the law.

This brings us again to our courts and the controlling construction made by them of the legislation of 1901. It is not out of place to observe that the courts of this State have been just as progressive as the general assemblies with reference to the development and upbuilding of the State in relation to the well-known, if poorly exercised, obligations of these common carriers. Both of the acts, that referring to consignors or pick-up duties, Burns 3312b, and that referring to consignees or the duty of delivery, Burns 3312a, have been construed and upheld by the Supreme Court, and in each case the judgment of the Circuit Court in prosecutions by the State and the penalties imposed were sustained. In *Adams Express Company v. State*, 1903, 161 Ind., p. 328, construing Burns 3312b, the Supreme Court said:

"The object of the act of 1901, *supra*, was to prevent unfair or unjust discrimination by one express company or combination of express companies acting as common carriers in this State *against any consignor* or other responsible company engaged in the same business, *and to secure to all consignors*, including other responsible express companies, equal terms, facilities, accommodations and usages in the receipt, carriage, continuance of carriage and delivery of money and property usually carried by express companies. To this end the act prohibited the granting by such companies to any one carrier, class or combination of carriers, any terms, credit, privileges, advantages, usages, accommodations or facilities in the receipt, transmission or delivery of express matter which they did not grant to all others.

"The statute of May 15, 1901, was enacted by the legislature in the legitimate exercise of its police power for the protection of the public welfare. The State constitution itself declares (par. 1, article 1) that all free governments are and of right ought to be instituted for the peace, safety and well-being of the people. If this is the chief end of a government which is carried on by and through the agency of laws, it follows that the legislature may and must, from time to time, enact such measures as the well-being of the people of the State requires. Great interests which have grown up and which closely and seriously affect the commercial convenience and prosperity of all the people of the State—interests which, in their present form and dimensions, were unknown to the common law—are both proper and necessary subjects of police protection, regulation and control. It can not be safely admitted that these vast and powerful agencies, by and through which a large part of the carrying trade of the people of the State is conducted, are beyond the control of the legislature. The well-being of the people demands that they shall at all times be subject to the rein and curb of the law, and that their methods of conducting their business must conform to those principles of fairness and justice with which the interests of the public are inseparably bound up. The relations of such agencies to the public and to each other, and an authoritative declaration and definition of their duties and obligations are clearly within the scope of legislative authority wherever important public interests are involved, and this principle applies whether such agencies are corporations, quasi corporations or co-partnerships acting as common carriers."

In 1904, in the case of the United States Express Company v. State, 164 Ind. 196, the act requiring delivery in towns of 2,500 population was upheld by the Supreme Court. In that case the express company received at Kokomo a package addressed to Thomas A. Gerhart, the prosecuting witness, at his residence, and notified him by postal card of its arrival. Mr. Gerhart called up the agent and requested him to deliver the package at his residence. The agent stated that the express companies had limited their delivery limits and declined to deliver the package. A fine was imposed upon the company and an appeal taken. The Supreme Court affirmed the decision of the lower court. In this case the principles of justice and business affecting these carriers, so often affirmed by the courts, is clearly and strongly expressed: "Property does become clothed with a public interest when used in a manner to make it of public consequence, and affect the community at large. When, therefore, one devotes his property to a use in which the public has an interest he, in effect, grants to the public an interest in that use and must submit to be controlled by the public for the common good to the extent of the interest he has thus created." P. 212. "The only logical ground on which these carriers by express can justify their existence, as pointed out by Judge Redfield, is as an auxiliary to carriers by railroad and boat which can only make warehouse deliveries." P. 210. "The purpose of the statute is merely to require the carrier under the compulsion of a penalty to observe its general duty." P. 204. And that general duty, "in the absence of any statute," is defined as follows: "Laying aside all question as to the delivery of goods by express at small stations, and also the question of usage as affecting the carrier's obligation, neither of which is an element in the case before us, it may be said that it is the duty of a carrier by express to deliver packages received by it to the consignee at his residence or place of business." Pp. 202-203. Citing Hutchinson on Carriers, section 716, quoted above.

It has been the opinion of this Commission and the impression generally throughout the State, as we are informed, especially since the decision of the Supreme Court just referred to, that the meaning of this statute is too clear to need an attempt at further comment or construction. But counsel for respondents in this inquiry insist that the statute "does not expressly set out that such delivery shall be free," and that the courts have not held that the words "free of charge," or equivalent words, shall be read into the statute.

Long before this statute was passed the obligations of express companies were understood in the State of Indiana. There were many cities and towns, including college towns and manufacturing towns, and the citizens of the State were enlightened and progressive and understood their rights with reference to transportation. The strict accountability of express companies to the characteristic feature of their existence and purpose, namely, the taking up and delivery of parcels, was appreciated by the people and the legislation of their assemblies and the decisions of their courts show that they were not ignorant of these extraordinary obligations of these common carriers. So that when, as late as the year 1901 the express companies often failed to do the business required of them by the law and paid for in the rates charged by them, the General Assembly of the State, representing the knowledge and the customs and the just demands of its peo-

ple, and for their relief, acted on this subject, and in the form of the short and comprehensive statute we have quoted defined the general duty of these common carriers. We can easily assume that the same complaints came to the assembly that have been made to this Commission—that these common carriers would not take up and deliver in the State, as it was their duty to do, and that even in the large cities they evaded this obligation and dared to make arbitrary limits for taking up and delivering, and to charge, outside of these limits, not only the express rates, which are generally as much as four times the railroad rates, and are so made in excess of the railroad rate on account of this very service of delivery, but to add a new charge and extortion, which they so well knew they had no right to exact that they frequently instructed their local agents not to collect the local charge for delivery if the consignee would not pay it, but to deliver the goods, as they were bound to do, and to come back to the express office and get their pay from the express company. Here was the duty and legal obligation; here the practice and the grievance because the duty was not performed; and now here the statute simply making clear the well-known obligation and providing a penalty for failing to discharge it.

A question has been made about this statute whether or not because it defines the area within which deliveries shall be made it is meant by this provision to enact that companies need not deliver at small places. While it is not necessary to decide that question now, we call attention to the fact that the Supreme Court, in construing this statute, has said that it was passed to define the general obligation of the carrier and to provide a penalty. Therefore, it seems to us that under this construction of its purpose and meaning it is not necessary to hold that the act, by requiring deliveries in towns of twenty-five hundred inhabitants, meant to prescribe that deliveries, under the general duties of the companies, should not also be made in towns of lesser size.

Referring again to whether or not this statute means that delivery shall be free, we must, of course, in this case, advert to the well-known rule of construction that in order to ascertain the meaning the mischief to be remedied should be considered. The condition and circumstances, the strictness of duties to which these companies were held in the State were so well known that it never occurred to any member of the assembly, nor even to the learned Supreme Court of the State, when this statute was construed by that court, to imagine that it was essential to interpolate the word "free" into the statute in order to express what the word "delivery" means. The legal obligation, the distinctive characteristic feature of the companies, was to deliver. They were organized to do this and were either doing it, or pretending to do it. It was, indeed, as we have so clearly perceived, the chief purpose of their existence. The General Assembly did not undertake to amend, alter or change the duty and obligation of these common carriers. The intention and purpose was to enforce them, and within certain limits to provide a penalty for failure to deliver. How could any sane member of the General Assembly conceive that it was necessary to add anything more to the words of this statute to make it clear? If the subject had been entirely new, if these companies were not operating in a certain way, if they had not been legislated about, and if the courts had not declared what their well-known obligations were, it

might have been different, and it might have been necessary to attempt to make clearer the law as it was enacted. We must consider the fact that the term "deliver," in its obvious and ordinary sense and meaning, when applied to the business of express companies, is so clear that it seems hardly possible that anything more could have been said to express the intent of the General Assembly. We must conclude that if it had been intended that the express companies, on account of the passing of this act, should be allowed to change their entire manner of doing business, and to require, after the passage of the act, a special fee and new charge and something added to their rate for the service, before that time performed without this additional charge, that if this had been intended, or could have been intended, it would have been so expressed in the act. The fact is that in the effort to write about this statute, to show any reason why other words could have been used, we come constantly to absurdities and superfluities, and find ourselves in the unenviable mental condition of trying to make a perfectly clear thing clearer. The Supreme Court passed on all the questions involved in a prosecution under this act. The express company declined to deliver a package at Kokomo, Indiana, because it said it had made delivery limits in that city. The prosecutions were commenced, the penalty imposed, and on appeal to the Supreme Court this statute and this punishment was upheld. This should be an end of the controversy.

The case of *Ballard v. American Express Company*, 107 Mich. 695, is the only case we can find which seems to assert a doctrine in opposition to the overwhelming current of authorities:

"Where an express company, in apparent good faith, and with due regard to the public requirements, has assumed to fix limits in a city beyond which it will not call for or deliver packages, it is under no obligation to one having knowledge of the limits so fixed to extend the service beyond them, and this is so, although such limits extend further from its office in one direction than another."

Mr. Hutchinson in his work on Carriers, section 123, quotes this doctrine, but gives no other authority than the Michigan case. So far as we are able to understand the law, this case is not authority. It is declared in the first place that the express company is entitled to limit its receipts of packages to its own office or place of business, but an express company is organized for the purpose of doing business in a different way. Of course, if a consignor attempts to deliver a package to the express company he must bring it to the office or station, but the consignor has the right, especially if the express company maintains, as it did at Kalamazoo, wagons and messengers to take up and deliver goods, to demand the pick-up service, and if the goods are to be delivered to demand personal delivery. In that case other persons were given the service by the express company who resided further from the express office than did plaintiff, and yet the court held that there was no discrimination. Indeed, the court also held that there was no measure of service in the duty and obligation of these carriers except their will. According to that case they may make delivery limits where they please and deliver or not as they please, within these limits, because they can change the limits whenever they please to do so. This case is reactionary of all the best considered law on this subject. It

stands by itself and has not been followed, certainly not by the Indiana Supreme Court, and so we are authorized to conclude that it is not the law.

William F. Harnden, born in Reading, Mass., in the year 1812, was the founder of express business in America, the original expressman. Harnden died at the early age of 32 years, and on his tomb in the historic cemetery in Mt. Vernon, erected by the leading express directors in 1866, there is a very graphic bas-relief, a loaded express wagon, from which the driver is delivering a small parcel to a lady, the idea of personal delivery being maintained even on his mausoleum. Harnden commenced business with a small valise, which he carried in his hands. The Boston Transcript of March 21, 1839, contains the following: "Harnden's express between Boston and New York has been running since the 4th of March and is found highly convenient for those who wish to send small parcels from one city to the other. Mr. Harnden may be confided in for honesty and fidelity in the discharge of his engagements, and it affords us much pleasure to recommend his express to the notice of our readers."

So also in 1840, when Alvin Adams, the founder of Adams Express Company, commenced business he carried nothing more than his valise, and it is said he could have put in his hat all the packages he received for some time. In the forties and fifties a great many express companies were started.

To make vivid comparison between express less than 100 years ago and now, and to show the wonderful increase of business and facility of present methods, we quote again from the Boston Transcript. Before Harden's time this paper attempted to get President Jackson's message from Washington to Boston by express, and employed, it says, three expresses, including one steamboat, to accomplish this feat. The issue of December 11, 1830, quaintly remarks: "After all this effort we would have been able to lay it (the message) before our readers at an earlier hour had not our express between Baltimore and Washington lost all his copies." And the famous pony express of 1858 is not forgotten, which carried letters 2,000 miles on horseback at a charge of five dollars each, and required ten days and relays of horses every twenty-five miles and riders every seventy-five miles to make the journey from St. Joseph, Missouri, to San Francisco, California.

Now, from time to time afterwards many express companies were organized in this country; some of these failed and many were amalgamated with other companies. During the Civil War these companies did a tremendous business, and were really of great service to the Union soldiers, establishing, especially the Adams and the United States, their agencies wherever the armies advanced and located.

The Commission has had before it two of the oldest express officers now living, both of whom live in Indianapolis—Mr. John J. Henderson, for forty-eight years an expressman, now with the Adams, and Mr. W. C. Fargo, thirty-seven years in the business, now with the American. Mr. Henderson states that the day President Lincoln was assassinated he had as much as twelve or fourteen cars of express (he was then with the United States Express Company at Cincinnati), and even in that day, and before, the express companies had advanced far beyond the small package

business. In the south the Adams Express Company carried negroes by express, and in the north the companies carried cotton in uncompressed bales from Cincinnati to New York and other places, Mr. Henderson recalling one shipment of 1,500 bales in 1862.

It was soon understood that the express business would be very lucrative, and hence competition took place, which extended even to the government. Livingston, Wells & Co. conducted an express between New York and Buffalo. The postage at the time was 25 cents for a single letter. The express company advertised that it would carry a single letter for 6 cents and sell twenty stamps for a dollar. Public meetings were held which denounced the express company for attempting to do the postal business. The government reduced its rates, and even arrested the messengers of the express company to prevent this invasion of government revenue. (Stimson's Express History, pp. 62 and 63.) This contest between the government and the express companies for small parcel business was active just after the war, and as to money business, and even parcels, as is well known, has continued to this day. The most formidable private competition against existing lines in the early days was an association of merchants and business men, known as the Merchants' Union Express Company, organized with a capital of \$20,000,000.

Referring again to competition of the postoffice department of the government with the express companies, it is evident that in the end the government will compel the companies to reduce their rates. Congress has for many years adopted the "cost of service" rate so far as postal matter is concerned, regardless of distance, which is exactly the opposite of the "value of service" rule of the express companies. As early as 1863 Congress introduced the postal transportation of a few specific articles of merchandise in eight-ounce parcels. In 1874 the service was enlarged to general merchandise in parcels up to four pounds at the rate of one cent for two ounces, one-half the present rate. In 1885 the publishers' rate was provided by Congress for newspapers and magazines at the rate of one cent a pound in parcels unlimited in bulk or weight, except, perhaps, in practice, by the size of the mail sack with a capacity of 150 to 200 pounds; and this rate carries the merchandise of American publishers throughout North America to the Philippines and to China. In competition with it the express companies carry the same merchandise in parcels of ten pounds or over at one cent a pound to nearly all points from the door of the publisher, say in Indianapolis, to the door of the customer in San Francisco. From this practice the questions naturally arise: If the companies can carry at this rate in competition, why can not they reduce their general merchandise rates? If they carry this stuff at a loss, the loss made up by higher rates on general merchandise, why shall they not give up this business to the government and thereby take off of their other patrons the burden of this losing business?

Before proceeding further, we desire to say that we are compelled to this general view in summing up in order that our conclusions in this case may be understood. It must be remembered that on account of the failure of express companies to keep accurate accounts and statistics and to separate their business earnings and expense, interstate from intrastate traffic, we find it extremely difficult to formulate and express the reasons

which, nevertheless, are clear and satisfactory to us for the recommendations and order we shall make in this case. And the organization of the express companies and their system of accounting are so unknown that we thought by throwing some light on their history and general transactions that we could best arrive at a definite idea of proper regulation within our own state lines and make our conclusions clear to the parties, who are, in this case, the general public on one side and the express companies on the other. Not much has been written on these carriers in the public press. Up to one year ago they were not subject to the power of the Interstate Commerce Commission. They made no reports; none were required of them. Says the official German report on American railroads of the express companies: "Unlike any of our commercial and industrial companies, their methods of management are of a peculiar private character, which makes it hard to get inside information of their business affairs." It is astonishing, indeed, considering the magnitude of their earnings, which probably now reach the sum of one hundred million dollars annually, that they have been permitted in this country to proceed for so long a time to make just such rates as they have been pleased to establish. There was practically no competition, except as set out above. President Ingalls, of the Big Four Railroad, stated to the Industrial Commission that the express companies managed their business by making agreements between themselves, and, indeed, the financial journals give occasionally accounts of change in rates agreed to in conference of the traffic officials of these companies. We have been able to find very few publications on these subjects. However, in addition to Stimson's Express History, secured for us from the congressional library by our efficient state librarian, we find also that F. H. Dixon, a strong railroad and economic writer, gives some very useful information in a paper on "Publicity for Express Companies" in the Atlantic Monthly for July, 1905. Some extracts from this article will, among other things, show the extreme difficulty of the inquiry we are pursuing in this case. Says Mr. Dixon:

"It is evident from the testimony of express company officers and managers in various legislative investigations that, without a complete reform in their statistical methods, the companies would be unable to give any satisfactory account of the extent or character of their traffic or of the reasonableness of their charges. Testimony given before the Railway Mail Pay Commission in 1898 and 1899 brought out the fact that, with the exception of the American Express Company, no company attempted to keep any traffic statistics, and it is understood that the agents of this company, on January 1st, of this year, were ordered to discontinue the practice. As might be expected, therefore, the testimony of officers before investigating commissions has been invariably vague and unsatisfactory. Testimony as to the average weight of packages carried, the typical kind of merchandise, the proportion of express traffic which is mailable, and the average charge per package, appear to be merely individual opinions based on observation, and are frequently contradictory. Statistics of express business published in the census of 1890, and including, besides figures relating to mileage, equipment, employes and expenditures, the number of packages carried and their weight, have often been used to determine the character of express traffic and the reasonableness of the charges;

yet General Manager Julier of the American Express Company, testified before the Railway Mail Pay Commission that the statistics furnished by him after repeated requests of the census agents were merely estimates hastily prepared. In view of the fact that none of the other companies keep any traffic statistics whatever, the census figures may be cast aside as worthless."

And again:

"Nothing is known of the amount of money invested in the business, or of the expense of conducting it. Only in a few individual instances, under pressure from investigating bodies, have the contracts with the railways been made public."

And again:

"Competition between express companies operating on different railways serving the same termini is never heard of. There has been occasional friction in the interchange of through traffic, but it has been only temporary, the public usually paying the charges of two express companies instead of one. As already noted, rates are scrupulously observed, and the semblance of competition leads to the maintenance by each company, at many points, of facilities far beyond the need of the community served, entailing an unnecessary burden upon the public."

Statistics of receipts, expenditures and operation being in the condition described by Mr. Dixon, and the same obstacles having been encountered by this Commission in this investigation as occurred in other like proceedings by state commissions, and nothing having been elicited giving accurate information to enable us to separate intrastate expense from interstate expense, we must continue to consider all reliable general information at hand to enable us to arrive at a satisfactory conclusion, and here we find our rate making administrative powers available, which supervise economic problems such as are really necessary to be considered in practical rate adjustments. "A law court," says Mr. Ackworth, *Railway Economics*, p. 156, "is not adapted for economic discussion. It can only try definite issues between certain parties according to the establishment of rules of evidence and procedure. It can try the issue, 'How much is the cost of carrying coal from A to B increased in a given time? And it can decide how much the particular rate should be increased to cover that increased cost.' But if there has been a loss of volume of traffic, say on coal, or the cost of carrying coal had very much increased, a court would not be competent, as a rate tribunal is competent, to determine what traffic shall be selected as best capable of bearing an increased rate, having regard to points on the whole equitable to that traffic and most to the public interest." Nor would legal machinery be the best and most practical means to determine the main issue presented in this inquiry, namely, what class of rates of these common carriers on the lines in this State shall be reduced if it shall be found that their rates are excessive; and for this very reason we respectfully submit that all possible intendments and presumptions of the correctness of rates fixed by the Commission should be entertained by the courts, and that Commission rates should not in any case be set aside where it is possible to uphold them. In *Smyth v. Ames*, U. S., p. 754, the court declares: "The judiciary ought not to interfere with the

collection of rates established under legislative sanction unless they are so plainly and palpably unreasonable as to make their enforcement equivalent to the taking of property for public use without such compensation as under all the circumstances is just both to the owner and the public; that is, judicial interference should never occur unless the case presents clearly and beyond any doubt such a flagrant attack upon the rights of property under the guise of legislation as to compel the courts to say that the rates prescribed will necessarily have the effect to deny just compensation for private property taken for public use." And this rule should be applied with great strictness in long and involved inquiries like this where public common carriers either failed to keep their books in such shape as that they can make accurate response to the inquiry of the public through its state commission, or if they have the information fail to furnish it. "The time has gone by when the mere statement of a traffic opinion which can not be supported by some assignable reason can be of much weight with this body." Interstate Commerce Commission, Traffic Bureau of St. Louis, v. M. P. R. R., decided February 4, 1908. And the Appellate Court of Indiana, in *Southern Railway v. The Railroad Commission*, decided February 7, 1908, says: "Many of these things essential to enable the Commission to fully understand and intelligently act in the matter are peculiarly within the knowledge of the railroad company whose rate is challenged, and are not obtainable by the party making the challenge. This is true with reference to capitalization of the road, the expense of its construction, expenses of maintaining and operating the same, the peculiar conditions existing that would justify a low rate in one case and a high one for apparently similar services on their own line in another. And where the petitioner has presented all the evidence reasonable within his reach and such evidence makes a prima facie case, it rests upon the railroad company to bring before the Commission such facts as are peculiarly within its knowledge that will tend to sustain the reasonableness of their charges in the particular case." Citing *Indianapolis v. Darnell*, 32 Ind. App. 695. It will be useful at this point to contrast this law with the following argument from Mr. Daniel's brief, p. 11: "But with the important items of loss and damage claims, wages and salaries, legal expenses and taxes omitted, and these individual items are not shown in the record, it can not legally be said that there is a showing that the express companies' earnings are excessive as compared with their expenses." And yet the Commission gave these parties all opportunity in the world to make this proof; indeed, tried its best to get it.

With the exception of one or two more general observations to be set out hereinafter as to conditions, we come now to the particular carriers, the respondents, in this case.

For we find that by the process of combination or monopoly or predatory elimination the small express associations or companies have fallen since Harnden's time by the hundreds, and that all the express work of this large country is done now by six great companies, all of whom maintain offices and do business in the State of Indiana.

1. The American Express Company, capital \$18,000,000, operates on the New York Central and other lines, with the M., K. & T. for western

connection, and controls miles of railway, and in the State of Indiana 2,504 miles of railway. It has 3,647 stockholders and nine directors.

2. The Adams, on the Pennsylvania and other lines, and the Burlington west, capital \$12,000,000, operates 35,946 miles, of which 1,550 are in the State of Indiana. It has 2,812 stockholders and seven managers or directors.

3. The United States, capital \$10,000,000, on the Pere Marquette, the C., H. & D., the B. & O., the Rock Island and Chicago Northern; total mileage, 30,041.62; total Indiana mileage, 1,497.17. It has 1,527 stockholders and seven directors.

4. The Wells-Fargo, capital \$8,000,000, on the Erie, A., T. & P. and the C. & E. I.; total mileage, 56,544; Indiana mileage, 678.76. It has 1,728 stockholders and thirteen directors.

5. The Pacific, capital \$6,000,000, on the Wabash and the Missouri Pacific, with a total mileage of 23,022 miles, including 574 miles in Indiana. It has twelve stockholders and seven directors.

6. The Southern, capital stock \$6,000,000, generally in southeastern territory, on the Southern Railroad, whose lines extend north of the Ohio river, in southern Indiana, operating a total of miles, including 204 miles in the State of Indiana. It has twenty-one stockholders and seven directors.

(Note.—The Southern Indiana is also respondent in this proceeding, but we know it is soon to be absorbed by one of the great companies. However, we shall include it in the order to be made in this case.)

There are forty-nine directors and 9,747 stockholders for all these companies. The aggregate capitalization is \$60,000,000, but the stock is probably worth twice as much. The directors of the American, Adams and United States have no definite term of office, but hold their places until their successors are elected.

It will be well to bear in mind that the principal railways of the United States have been reduced to seven systems, viz.: (1) The Vanderbilt, (2) the Pennsylvania, (3) the Gould, (4) the Harriman, (5) the Hill, (6) the Rock Island, and (7) the Southern, and that about one hundred persons control the directorate of all these systems.

The Official German Report, commenting on these conditions, says: "Many of the shares (express) are held by the railroad companies or their leading officials, who also elect the members of the board of directors, or fill these positions themselves, vice versa, many of the leading men of the express companies may be found in the boards of directors of the railways. Thus, for instance, the president of the Adams Express Company sits in the board of directors of the Iowa Central and of the Minneapolis & St. Louis Railroad, while the American Express Company influences the administration of the Boston & Maine Railroad, commensurate with the number of shares of the capital stock of the latter held by this company. Although one should think that the character of the business relations in which the railroads and the express companies stand—or, better said, should stand, to each other—should preclude, beforehand, any such close association. Americans do not see anything objectionable in it, nor in the fact that express companies hold shares of concerns competing with them."

"Express companies have little or no tangible property in this State. They have rights to operate an express business on the line of a railroad and they simply have space in the cars for their safes and messengers." Counsel for express companies to State Board of Tax Commissioners, 1906, p. 6.

During the hearing the question constantly recurred, "What have these common carriers invested in their business?" In many ways we endeavored to elucidate this subject, but were left, so far as the evidence is concerned, practically uninformed. We frankly say to the respondents that the general impression is that they put up originally, or at any time, very little money to carry on their immense business; that with their earnings mostly they have expanded their business, and we know from the direct evidence in this cause that additions to their equipment have been charged to expenses. The startling inquiry recurs, "Is it possible that these carriers have taken from the public in earnings the money on which they do business?" It is certain that they received from the public the money with which they have not only paid large dividends, but have purchased new equipment and set aside a surplus.

As often said, these carriers have not enlightened us on these subjects, so we must dig up as best we can what capital they have paid in so that we may know on what amount of capital stock they should be permitted to pay the dividends they declare as periodically as the seasons come.

As to the American. In 1850 Wells & Company Express, Livingston & Fargo Express, and Butterfield, Wasson & Company Express were consolidated into the American Express Company. The property and good will of Wells & Company were put in at a valuation of \$50,000; Livingston & Fargo, \$50,000, and Butterfield, Wasson & Company put theirs in at \$25,000, and made up the difference in cash. Two firms were then made of the three, namely, Wells, Butterfield & Company and Livingston, Fargo & Company, but all three were consolidated in a joint stock concern under the name of the American Express Company. Stimson's Express History, p. 66. Here we seem to have the capital stock of the American Joint Stock Express Company definitely fixed at its organization at \$150,000. In July, 1854, the American absorbed the United States Express Company (however, not the company now known by that name), and increased its capital stock to \$750,000. Ibid., p. 67. And in 1868, after a long and disastrous fight with the Merchants' Union, in which the latter is said to have spent more than \$7,000,000, absorbed that company. Each of the two great parties to this consolidation put in its capital and business at \$9,000,000, and the capital stock of the new company so organized was accordingly fixed at \$18,000,000, which is the nominal capitalization to this day. Mr. Stimson, on p. 121, says:

"The owners of the retiring company received a fair compensation in the new stock. Naturally, heavy loss had accrued to the 'American' in the hard-fought battle, but the failure of the 'Merchants' Union' was more severely felt by its *stockholders*; many of whom were widows and orphans."

There is no ebb in the tide in these transactions. In the first consolidation it does really appear that \$25,000 cash was paid in. The next movement was a new consolidation and an increase from \$150,000 to \$750,000

of stock, but what was paid in does not appear, but the *coup de main* was the increase from \$750,000 to \$18,000,000. As to this, it is said that the Merchants' Union lost \$7,000,000 in its fight with the American (Stimson, p. 12), and heavy loss probably fell to the American, and it is shown that an excessive valuation was put on the wrecks, but not once or anywhere that any money was paid in by the shareholders to recoup these losses. It seems that they finally fell upon the public, whose contribution in rates paid to make up these losses have for years provided dividends on what was lost in these rate wars by these companies. And these public contributions finally pulled these shares from their below par price in 1868 to the present quoted price on the market stated in the last returns to the Indiana Tax Commission at \$228.00 per share. In the printed testimony of Commissioner O. B. Colquitt, in the suit of Wells-Fargo et al. v. The Railroad Commission of Texas, U. S. Circuit Court for Western District of Texas, he states of the American that this \$18,000,000 represents \$5,300,000 actually paid into the treasury of the company. This is the only direct statement we have ever seen of the amount actually paid in, and Judge Colquitt says it is based on the reports and returns made to the Texas Commission by the express companies, and on the testimony of executive officers of said companies. (See page 62, Colquitt's testimony.)

As to the Adams. The original capital stock was probably the price of a valise carried by Mr. Alvin Adams. But in July, 1854, Harnden & Company, Thompson & Company and Kingsley & Company were consolidated into the Adams Express Coompany with a capital of \$1,200,000. Says Stimson, p. 108:

"The Adams in New York City.—Through its absorption of the Harnden and several other expresses the Adams had become, in 1866, the oldest of all the express companies, and its capital had grown to \$10,000,000. Its dividends, though limited to eight per cent. per annum, were paid quarterly, and with the most reliable punctuality. Its stock began to be quoted on Wall street at par, or above it, and such has been the public confidence in its management, that it has ever since been regarded as desirable for investment.

"In 1875 its capital stock was increased to \$12,000,000; just ten times what it was in 1854. This was in anticipation of the extension of its routes to New Mexico, effected in 1880; as will be shown in a chapter upon the Adams business in the territories."

As to dividends on this stock in its watered condition, we quote the answer of the respondent to Commission's interrogatory No. 5:

"In answer to interrogatory No. 5: The company has no stock. Its property is represented by 120,000 interests, or shares. Dividends were paid during the year 1906 amounting to \$10.00 per share, and since the 1st of January, 1907, dividends have been paid amounting to \$6.00 per share. The company has paid dividends upon its shares varying from \$4.00 per share to \$10.00 per share per annum for many years. Early in the existence of the company there were several stock dividends, but no stock dividends have been declared for upwards of thirty years."

"No stock dividends recently," says the answer. But this great company is not without the power of invention. Under the immense increment

of the business with no proportional economic rate reduction a great surplus accumulated. Something had to be done with it; hence, "to indemnify its shareholders against personal liability" in 1898 \$12,000,000 of bonds were distributed to the 12,000,000 shares of stock, and, wonderful to say, in 1906 the surplus was again a great burden of extortionate accumulation, and, without even the pretense of indemnification for personal liability, the golden flood gates were again opened and \$24,000,000 yielded to the shareholders of this company. From time to time dividends, of course, in 1906 amounting to \$10 per share, and from \$4 to \$10 for many years, were distributed, and the company very seriously assures us that it never defaulted in the payment of interest on these bonds, and, except as stated, never declared a bond dividend. What a gullible public! What fortunate shareholders! What a beneficent common carrier to its owners!

"In answer to interrogatory No. 6: On February 9, 1898, the company transferred to the Mercantile Trust Company of New York, as trustee, certain securities of the approximate value of \$12,000,000 to be held in trust to indemnify its shareholders against personal liability for its debts; and also for the benefit of the holders of \$12,000,000 collateral trust four per cent. gold bonds, which were issued to its shareholders at the rate of \$100 of such bonds for each share in the company. Said bonds are due March 1, 1948. On June 17, 1907, the company transferred securities of the approximate value of \$24,000,000 to the Standard Trust Company of New York as trustee, to be held for the benefit and security of the holders of \$24,000,000 face value of collateral trust four per cent. Distribution gold bonds of 1907 of the company, issued to its shareholders at the rate of \$200 face value of said bonds for each share of the company. The company has never defaulted in the payment of the interest on such bonds. Except as above stated, the company has never declared a bond dividend."

However, these compulsory disclosures were not quite agreeable to a common carrier whose policy, according to Mr. Dixon quoted before, was silence and division, as shown by its further answer to our interrogatories as follows:

"And in further answer to interrogatories Nos. 7, 9, 10 and 11, the express company respectfully submits that the information thereby required, except as hereinabove given, calls for the results of the business of the Adams Express Company entirely without the State of Indiana, and of the results of its interstate business, and for statements of its assets and property entirely without the State of Indiana; that said company is not a corporation, but an unincorporated association in the nature of a partnership, existing by virtue of a contract between its members, and has received no public grant or franchise from the State of Indiana or any state, and the said company respectfully represents that the State Railroad Commission of the State of Indiana has no legal right to demand of said company information as to its business and property outside of the State of Indiana, or as to its interstate business, and that answers to said questions, if made, would not furnish any information necessary as a basis for the public regulation of its business within the State of Indiana."

As to the United States: "The present company," says Stimson, p. 78, "was organized in 1854, with a capital stock of \$500,000." The annual

report made to the Commission shows its capital to be \$10,000,000, but again no statement enlightens us as to when and how it increased from a half million to \$10,000,000, and what, if anything, was ever paid in cash for this capital stock. In answer to our special interrogatory No. 5, "Has such company ever declared a stock dividend? If so, when and for how much?" the evasive and insufficient answer is given, "No stock dividend has been declared since 1866." Commissioner Colquitt, in the printed deposition above referred to, p. 64, says: "The United States Express Company has \$10,000,000 capital stock, and the vice-president states that, so far as he knows, or the reports show, no money was ever paid into the treasury for this stock." It is seemingly admitted that there were stock dividends before 1866. When? How much?

As to Wells-Fargo & Company. This extensive California express, known throughout the civilized world as Wells-Fargo & Company, was commenced in New York in the spring of 1852 by Henry Wells, W. G. Fargo, Johnston Livingston, A. Reynolds and E. B. Morgan. It was a joint stock company, capital \$300,000, subsequently increased from time to time to \$600,000. Stimson's, p. 75. It reports and answers to this Commission, the company says it was organized as a corporation in Colorado, February 5, 1866, as the Holiday Mail & Express Company, with a capital stock of \$3,000,000. That it is not a consolidated company, although several interests were merged at the time of its incorporation. That the name was changed in November, 1866, to Wells-Fargo & Company. That the present capital stock is \$8,000,000, and that the company has never declared a stock dividend or a bond dividend. But as to actual facts, we are, as usual, left without them as to how much cash was paid in originally or when the capital stock was increased from \$300,000 to \$600,000, or what was paid in when the former interests were merged into the \$3,000,000 corporation, or what was paid in when the capital stock jumped from \$3,000,000 to \$8,000,000. On this subject again we do find Mr. Colquitt in his sworn testimony above referred to affirming that the treasurer states that, so far as he knows, only \$500,000 in cash was ever paid into the treasury for this stock, but a high official of the company at our hearing challenged this statement, and, as was also customary, gave us then nor since nothing to take the place of it. This corporation concedes, in answer to special interrogatory 7, that it employs in the express business only \$4,317,432. It concedes also in its annual report that this property earned for the year ending June 30, 1907, \$3,381,172, a net profit of 76 per cent. per annum.

As to the Pacific. Organized under the laws of Nebraska, October 1, 1879, capital stock then and now \$6,000,000. No stock dividend; no bond dividend. But this company has paid dividends with almost absolute regularity, dividing in this way within the last twenty years \$8,334,000 among its shareholders, and to have also accumulated in addition a handsome surplus, amounting, June 30, 1907, according to their returns to us, to \$1,529,679.89. Furthermore, we have information, so far as this company is concerned, as to the consideration on which its capital stock was issued. Mr. John A. Brewster, auditor of the company, testified (record, p. 779), in answer to questions by Commissioner McAdams, that there were twelve stockholders, but that he did not know their names, and that the capital stock was \$6,000,000. And on pages 784-785:

"Q. What did you do with that stock, Mr. Witness?

"A. The capital stock of the company was given to the Wabash, Union Pacific and Missouri Pacific for the rights, franchises.

"Q. For what rights?

"A. Franchises and rights to do business.

"Q. We begin to understand it; it wasn't understood before that; nothing was received by the Pacific Express Company for the issue of this \$6,000,000 of stock? Do these railroad companies own the stock?

"A. Yes, sir.

"Q. These 12 stockholders are the railroads. The railroads get these six per cent. dividends on this stock?

"A. Yes, sir."

And this evidence confirms the statement of Mr. Colquitt in the case above referred to, viz: "The president of the company states that so far as he knows, and the records show, nothing in cash was paid into the treasury for this stock.

As to the Southern. Organized under the laws of Georgia in 1866, with \$6,000,000 authorized capital, of which \$5,000,000 was issued. For several years the company has been able to distribute \$4 per annum per share, but at the last distribution the amount was raised to \$8 per annum per share. And inasmuch as the shares are estimated as being worth only \$71.69 per share, these are fairly good dividends. This company has only 21 stockholders. We know nothing about the amount paid in on capital stock, but we can easily believe that these people organized after the other standard companies and having the benefit of their experience and example, did as the others did, paid in very little and took out very much.

We understand, of course, that not all the capital of these companies is used in the express business, and that part of the accumulations represent rents of property and interest on bonds and stocks acquired by these carriers. But what difference can this make when it also appears that practically all the property so acquired was paid for out of the earnings and not by money paid into the treasury by the stockholders. The public seem to have contributed most, if not all, of it. The main question seems, "What has been paid back to the public in reduced rates as these accumulations continued?" To put it succinctly, if the public has contributed in profits all the money that bought the real estate and bonds and stocks, the divided and undivided surplus, is it no entitled to some share in this surplus? It can only get its share by a general reduction in rates, and in this way only of future earnings. Is it not time to do this?

The express business may be said to be chiefly railroad transportation without the burden and difficulties and losses which fall upon the railroad companies. The railroad company incurs preliminary expenses and costs of surveys and charters and legal expenses, costs of rights-of-way and most expensive terminals, costs of rails and ties and bridges and cars and engines and depots and depot buildings and mail cranes and switches and water tanks and coal chutes, and other structures, buildings and appliances too numerous to mention. And even after construction, improvements, facilities and additions must constantly be made. And in a swiftly developing country like this there can be so much expended to improve the road or

make it safer, better and more durable than any ordinary excess of revenue may easily be appropriated to these purposes.

An express company buys very little equipment and owns very little tangible property to be used in the express business. If a railroad line is unprofitable or becomes so on account of floods or war or fire or pestilence or drought the money invested is sometimes an absolute loss, and also in such cases the railroad company must bear the entire expense of all repairs. If part of the line has little or no business, nevertheless the railroad must continue to operate and to carry what there is. The express company has no big outlay to pay interest on. It rarely, or never, has a bond, except as a means of making a dividend for shareholders. If business in any locality is unprofitable it may cease to do business at that place. It even assumes the right not to provide take-up and delivery facilities where it would not pay to do so. Railroad track and rails and railroad cars are worthless for any other than railroad uses, but what property the express company acquires it can sell when it ceases to use it, because it can be used for other purposes. It can lose nothing if the railroad fails, and, indeed, such contracts as the express companies have made with the railroads seem to constitute their chief asset of value.

We confess to grave doubts about these contracts. If the express companies can make such magical profits out of them, ought not the railroads to do for themselves this business? If the railroads allow the express companies to buy transportation from them at too low a price, must not the railroad companies put in rates on their other customers to pay this deficit? How is it that the express companies make so much more money than they are entitled to make? Either they pay the railroad companies too little or they charge the public too much. In either event it comes finally out of the public. Now we know that the effect of putting an end to the evil rebates was to increase the earnings of railroad companies. For instance, the gross increase and income of the railroads operating in Indiana for the year ending June 30, 1907, over the year ending June 30, 1906, are shown by the tables in our second annual report to be over \$50,000,000. Attribute much of this to the natural increase of business, but part of it is unquestionably due to the uniform and equal charges required by government regulation acts. Is it possible that the express companies' contracts embody in some form a long-continued and increasing abuse of railroad transportation? Is there unjust discrimination in these contracts? Could this business be done better and more economically by the railroads, as it is in Germany and England, and as some railroad people insist it can be done in this country? And would the railroad companies, by having the additional \$100,000,000 of revenues of the express companies added to their incomes, give the public lower rates on this very service, or, what is more important, expend the net income in better track, better cars, in block systems and safety appliances, all of which are so much needed, in order to relieve, to some extent, the American disgrace of railroad fatalities? Would not this be a better application of the express surplus, especially since it seems it is never intended to make in favor of the public a general revision and reduction of their rates? And also should not these contracts contain a limitation of charges as to maximum rates? They do provide generally that the companies shall not charge less than double the first-class railroad

rate. Why should not the railroad company protect its patrons against excessive express rates by stipulating a maximum rate or providing for supervision by the railroad traffic departments? We quote again on this point from Mr. Dixon:

"It is a very great question whether the express business has not become in these last years an unnecessary agency, and a public burden—whether a reasonable extension of the fast freight service of the railways, on the one hand, already to some extent developed in the milk, fruit and meat traffic, and the inclusion in the mail service of a parcels post, would not make it possible, with a slight increase of their present facilities, to do away with the express service altogether. The only function of real social utility performed by this agency, not already covered by the other two, is its delivery service by wagons, and English experience has shown that this may be made an efficient part of the railway service."

We come now to what is to us the most convincing reason for our conclusion that the rates charged by the express companies are excessive. The wonderful increase of earnings of the express companies from hundreds or thousands to millions, an increase that has more than kept pace with the development of the country, is the open secret of the swollen profits of these concerns. Ackworth's economic formula is directly applicable, namely, "If it costs x to deliver 1,000,000 units of traffic, 5,000,000 units will cost not $5x$, but $\frac{1}{2}x + (\frac{1}{2}x \times 5) = 3x$." In nearly all business, especially in transportation, expenses increase as traffic increases, but by no means in the same proportion. "Therefore," says Mr. Ackworth, "the heavier the traffic the lower (profits remaining equal) need be the rate." Ackworth's *Elements of Railway Economics*, p. 50. Again, "As the traffic increases the average rate goes down, and as the rate goes down the traffic increases." *Ib.*, p. 64. Unless as the traffic increased the rates were reduced it is certain that the net returns would soon be too large to apply to dividend account and a surplus would be inevitable. We can not agree that such results are fair to the patrons of the company. The company is entitled, indeed, to fair returns, but when these have been accounted for, as population and traffic increases and as the costs per unit of traffic necessarily decrease, the public is justly entitled to some portion of these earnings in reduced rates. As we have seen above what must have taken place did actually occur. Take one of the great companies as an example. Upon a largely fictitious capitalization it accumulated surplus so rapidly, after paying full dividends, that in eight years' time it divided among its \$12,000,000 stock \$36,000,000 surplus.

The visible fact of the surplus tends to show that if any reduction of rates was made the reduction was not sufficient. But it appears from the record in this case that express rates, especially for short distances for local traffic, are just about what they were many, many years ago. H. H. Lancaster, American agent at Lafayette for thirty-six years, testified that, except some slight and immaterial decreases, the intrastate rates in Indiana had been the same for twenty-five years. *Record*, p. 99, et seq. Mr. Bradley, traffic manager of the American, testified that there had been no reduction in the 25 cents minimum for eighteen years, p. 423. And again, p. 472, Mr. Bradley testified to conditions that reverse the main economic rule of transportation and illustrate the glaring injustice to the

rights of the public. Asked about the gross earnings, he said: "A. The gross earnings have continually increased for years. Q. Do they increase as noticeably when there is a reduction in the rates as when there is no particular reduction? A. We have made no general reduction in rates." And J. Zimmerman, general manager of the Adams, testified, p. 515, that he had held office for twenty-five years and that during that time his company had made no general revision of rates. And while he stated afterwards that there had been a constant reduction in rates, he was unable to tell on what particular lines the reductions had been quoted. "Q. What I want to get at is if you can tell whether reduction was made. A. I can't give it to you." And so, also, Mr. John D. Ludlow, traffic manager of the Wells-Fargo & Company, stated that in 1888 the rates were practically what they are today, p. 361. The evidence sustains and explains the surplus, and the surplus would establish the fact of excessive rates without the evidence. Either is sufficient to put in force the coercive process of government regulation where common carriers have unjustly appropriated all accumulations of increasing business. And to better comprehend the singular transportational condition of no general reduction, compared with the constant reduction of ordinary railroad rates, let us take from the Massachusetts Thirty-ninth Annual Report, 1908, p. 22, the average freight rate per ton mile (all Massachusetts roads) for thirty years, 1878-1907, as follows:

Years.	Rates, Cents.	Years.	Rates, Cents.	Years.	Rates Cents
1878.....	1.92	1888.....	1.55	1898.....	1.22
1879.....	1.82	1889.....	1.50	1899.....	1.18
1880.....	1.84	1890.....	1.45	1900.....	1.22
1881.....	1.71	1891.....	1.42	1901.....	1.20
1882.....	1.71	1892.....	1.36	1902.....	1.24
1883.....	1.72	1893.....	1.39	1903.....	1.23
1884.....	1.64	1894.....	1.33	1904.....	1.27
1885.....	1.59	1895.....	1.28	1905.....	1.14
1886.....	1.64	1896.....	1.28	1906.....	1.23
1887.....	1.62	1897.....	1.25	1907.....	1.19

Or, compare the freight receipts per ton mile of all the railroads, namely:

GROSS AVERAGE RECEIPTS PER MILE, 1888-1906.

Years.	Freight Re- ceipts per Ton Mile. Cents.	Years.	Freight Re- ceipts per Ton Mile. Cents.	Years.	Freight Re- ceipts per Ton Mile. Cents.
1888.....	1.001	1895.....	.839	1902.....	.757
1889.....	.922	1896.....	.806	1903.....	.763
1890.....	.941	1897.....	.798	1904.....	.780
1891.....	.895	1898.....	.753	1905.....	.766
1892.....	.898	1899.....	.724	1906.....	.748
1893.....	.879	1900.....	.729		
1894.....	.860	1901.....	.750		

Our impressions are fortified by foreign views and comparisons with American express business. These will show how much more it costs than it ought to cost to maintain these express appendixes to our railroads.

The Official German Report of American railroads by Privy Councilors Hoff and Shwabach, translation just published, calls our express companies a "distinctly American creation, unlike any of our (their) commercial and industrial companies," meaning, evidently, as the report proceeds to disclose, that their peculiar organization, character, practices and extortions would not be tolerated by any other civilized nation. To emphasize our observations we quote briefly from this report as follows: Referring to the fact that the shares of the express companies are held by the railroad companies or their leading officials, who elect also the board of directors of express companies, or fill these offices themselves, and that the leading men of express companies may be found in the directorate of the railroads, these gentlemen say: "Although one should think that the character of the business relations in which the railroads and the express companies stand—or, better said, should stand to each other—should preclude, beforehand, any such close association, Americans do not see anything objectionable in it, nor in the fact that express companies hold shares of concerns competing with them." The report adds: "The real sufferers are, of course, the American people, as they have to pay for the transportation of parcels and package freight four times the usual railroad freight tariff rates, for this is, as a rule, the rate of the express companies."

Edw. A. Pratt, an English writer on English and American railways, gives us, on page 10 of his book on railroads and their rates, some facts and figures that are not flattering to the business acumen of the American public. His table shows the parcels rates of the Great Western Railway, English, compared with the rates of American express companies, and are as follows:

GREAT WESTERN RAILWAY COMPANY.							AMERICAN EXPRESS COMPANY.					
Weight of Parcel.	Miles.						Miles.					
	10.	20.	30.	50.	100.	200.	10.	20.	30.	50.	100.	200.
lbs.	s.d.	s.d.	s.d.	s.d.	s.d.	s.d.	s.d.	s.d.	s.d.	s.d.	s.d.	s.d.
2.....	0 4	0 4	0 4	0 4	0 4	0 4	1 0½	1 0½	1 0½	1 0½	1 0½	1 0½
5.....	0 6	0 6	0 6	0 6	0 7	0 7	1 0½	1 0½	1 0½	1 0½	1 0½	1 5½
10.....	0 6	0 6	0 6	0 8	1 0	1 0	1 0½	1 3	1 3	1 3	1 3	1 8
15.....	0 6	0 6	0 6	0 9	1 2	1 7	1 0½	1 3	1 3	1 3	1 3	1 8
20.....	0 6	0 6	0 6	0 11	1 4	1 10	1 0½	1 3	1 3	1 3	1 3	1 10½
25.....	0 7	0 7	0 7	1 1	1 7	2 1	1 0½	1 5½	1 5½	1 5½	1 5½	2 1

The above table reduced to American currency would read as follows:

GREAT WESTERN RAILWAY COMPANY.							AMERICAN EXPRESS COMPANY.						
Weight of Parcel.	Miles.						Miles.						
	10.	20.	30.	50.	100.	200.	10.	20.	30.	50.	100.	200.

We quote from Mr. Pratt, pp. 9 and 10:

"From this table it will be seen that, so far as regards small parcels, the British trader who sends by rail has a distinct advantage over the American trader who consigns by an express company, though the charges become equal when we get to a parcel weighing 25 pounds and going a distance of 200 miles. If the comparison were followed up still further, to show the respective charges for larger parcels carried greater distances, the results in regard to these will favor the express company. The position in the United States is this: The ordinary railway companies there do not care to handle the small parcels business at all (not wanting to be 'bothered' with it, as an American railway official once put it to me), and they leave it entirely to the express companies. These, in the absence of a parcels post, work the business for all it is worth, and charge just as much for carrying small parcels as they think the American public will stand. Hence it is that the American trader will have to pay 1s ½d to his express company for the same service as the English trader gets for 4d. But as soon as the American express companies begin to handle big parcels, and carry them considerable distances, their monopoly is at an end, for they come into competition with the railways, and from that point their charges show a substantial decrease in proportion."

We must not fail to note the small English minimum of 8 cents, and for packages of 25 pounds, 14 cents, against the American 25 and 30 cents, and we must never forget the fact that this small British minimum includes the personal service of taking up and delivery so often denied for the same kind of service in this country.

We must not fail to note that for short distances, that is, for local, generally intrastate business, our charges are out of all reason higher than the British rates.

We must not fail to note that Mr. Pratt's deliberate opinion is that our express companies work us for all we are worth, and charge just as much for carrying small parcels as they think the American public will stand. If Mr. Pratt will come over and look again he will find the fact to be that the express companies have never had the justice, and, we may add, from the signs of the times, the business perspicacity to let the public have some share in the great increase of the public's business by a fair and general revision and reduction of rates. This, of course, must come, even if it shall take place only as the result of long, hostile and continued opposition and litigation, and finally, perhaps, drastic legislation.

In connection with Mr. Pratt's tables, we interpolate here, for illustration, a report and comparison from our traffic department showing express and railroad rates from Indianapolis to points on railroad lines diverging therefrom. The great contrast and diversity of these rates is manifest.

"Railroad Commission of Indiana, Indianapolis, Indiana :

"I herewith hand you, as directed, comparative table of express and railroad first-class rates from Indianapolis to points on lines diverging therefrom to principal points in the State, as per your instructions of the 1st inst.

TABLE OF EXPRESS AND FIRST-CLASS RAILROAD RATES FROM INDIANAPOLIS TO POINTS NAMED (IN INDIANA).

Note—The rates quoted are the express rates per 100 pounds applying on what is termed merchandise shipments; and the first-class rate on the railroad to the same point; all rates are named in cents per 100 lbs.

No charge is made by the railroad of less than 25 cents, and the merchandise express minimum charge would not be less than 25 cents."

The value of service rule is invoked in this case as the justification for the rates maintained by these carriers. This principle takes its paramount place in cases where it is necessary to apply it in order to properly apportion the rates between the different classes of traffic on a carrier's line to get out of the entire business enough to pay operating expenses, and in addition fair returns on the amount invested or on the value of the property. It involves the sacrifice of the greater charge of such high-class traffic as can afford to pay it in order that bulky articles of small value, that may have to be carried long distances to find a market, shall be transported at a very low rate. The result in the aggregate tonnage and revenue movement is that each class of traffic has contributed to moving the other class. If the high-class freight had not sustained the higher rate the lower class could not have moved at all, and if very low rates had not moved the lower classes still higher charges than were made would necessarily have been imposed on the high-class traffic. The Interstate Commerce Commission, early in its history, recognized this equitable rate adjustment in the following words:

"The public interest is best served when the rates are so apportioned as to encourage the largest practicable exchange of products between different sections of our country and with foreign countries; and this can only be done by making value an important consideration, and by placing upon the higher classes of freight some share of the burden that on a relatively equal apportionment, if service alone were considered, would fall upon those of less value. With this method of arranging tariffs little fault is found, and perhaps none at all by persons who consider the subject from the standpoint of public interest."

But the condition here before us is not an adjustment of rates between all classes of traffic to produce sufficient revenue to meet the just obliga-

tions of the carrier, nor the fixing of a reasonable rate for a single transaction, but the actual, recurrent, persistent condition of too much revenue. Here is not the analogy of railway rates constantly being reduced and at the same time the burden of higher wages and the pressure of public demand for better, larger, speedier, more expensive and safer facilities, but the chief part of the operating expenses, namely, the railway contracts, practically the same they have been for many years, about one-half of the gross receipts. And here also is the same, or very nearly the same, old merchandise rates, especially for local traffic, as was applied before the country had taken its giant strides, its geometrical progression to a volume of business almost incomprehensible. We fail to grasp a measure of comparison when we look at the procession of 750 wagons now employed by the American in Chicago, or to conceive of \$36,000,000 distributed to its \$12,000,000 stock by the American's rival, the Adams, within a period of eight years. But when we do perceive what this means we find that what is imperatively demanded here is primarily and justly the application of those principles of rate-making which require, in the interest of the public, which has given to these carriers the franchises to do business and has given to them also all this tonnage and business, constantly augmenting and growing, its fair part of the decreased and decreasing cost on each unit, and therefore, on all units of the business, and its fair share of the resulting accumulation justly rendered and returned in a general reduction of rates. So that clamor as these people may for the value of service rule, it may not be fully extended to them until they themselves have given fair consideration to the reduced cost of the service performed by them by a general reduction of their rates.

This inquiry has demonstrated that express business is greatly profitable, yielding, our counsel insists, from 16 per cent. to 75 per cent. on the capital invested, and that it is especially profitable where there are facilities of transportation and population and wealth and agricultural and manufacturing and mining products. Indiana has all these. She is the twelfth state in population, the ninth in agricultural products, the eighth in manufacturing products, and offers and receives large and various subjects of transportation. For example, the Cleveland, Cincinnati, Chicago & St. Louis Railroad extends through and into the states of Ohio, Illinois and Indiana with a total mileage operated of 1,983.28 miles. Of these 767.07 miles are in the State of Indiana. The total gross earnings from operation of this company are \$25,677,868.67. Of these the total for Indiana is \$9,952,199.60, thus showing that Indiana contributes fully as much if not more to railroad earnings than the great states adjoining. And local conditions in the State are exceptionally favorable for the express business. Indianapolis, almost in the center of the State, is the largest inland city in the world, with twenty-five railroad lines extending in every direction. There is no better express point, population considered, in the country. Every large area of territory in the State contains some flourishing city to provide for the local wants of surrounding towns, villages and country. Evansville, Fort Wayne, Terre Haute, South Bend, Richmond, New Albany, the factory cities of the gas belt, the university and college towns and cities, the lake cities, creations of Standard Oil and Steel Trust, the grain cities, northwest, the melon and berry vegetable territory in the

south, the stone and coal cities and towns, the milk and butter and poultry and live stock business throughout the state, all demand the best express facilities and rates that can be afforded. Every large express company appreciates these local conditions by seeking this business, and yet the rates are as high as in most, if not all states of the Union.

We concede that many of the suggestions above are only evidentiary, and that in applying them we must follow the rules announced in the *Smyth v. Ames* case, 169 U. S. 466:

"That the reasonableness or unreasonableness of rates prescribed by a state for the transportation of property wholly within its limits must be determined without reference to the interstate business done by the carrier or to the profit derived from it.

"It can not, therefore, be admitted that a railroad corporation maintaining a highway under the authority of the state may fix its rates solely with the view to its own interests and ignore the rights of the public.

"If its capitalization is largely fictitious it may not impose upon the public the burden of such increased rates as may be required for the purpose of realizing profits on such fictitious capitalization.

"The legislature has the authority in every case where the power has not been restrained by contract, to proceed upon the ground that the public may not rightfully be required to submit to unreasonable exactions for the use of a highway established and maintained under legislative authority.

"The utmost that any corporation operating a public highway can demand is that it receive what, under all the circumstances, is such compensation for the use of the property as will be just, both to it and to the public.

"The basis of all calculations as to the reasonableness of rates to be charged by corporation maintaining a highway under legislative sanction must be the fair value of the property being used for the convenience of the public."

The *Indiana case, L. E. & St. L. R. R. Co. v. Wilson*, 119 Ind. 352, frequently cited in respondents' briefs, has little application to this inquiry. This was a suit involving an individual transaction, an alleged overcharge in the rates on cross ties. No general consideration of rates was made. The effort was to find a measure, a reasonable rate to govern in that case, and the court determined that comparison, "or the amount commonly or customarily paid for other like services," was the best way to fix the charge in this specific case. "It was neither averred nor proved that the amount collected by the railroad company was unreasonable." And so judgment was given in favor of the carrier, and had it been otherwise there might have been discrimination against other persons. We do not perceive the analogy to this proceeding, nor any conflict between this case and our conclusions herein.

Another case very much insisted on by respondents, the *Kansas City Stock Yards Case*, 183 U. S. 79, not only fails to establish their contention, but distinguishes the respondents, who are public service corporations or who do the work of the public service corporations from "those in which, without any intent of public service, the owners have placed their prop-

erty in such a position that the public has an interest in its use." There is a difference, says the Supreme Court:

"In the one he deliberately undertakes to do that which is a proper work for the state. In the other, in pursuit of merely private gain, he has placed his property in such position that the public has become interested in its use. In the one it may be said that he voluntarily accepts all the conditions of public service which attach to like service performed by the state itself. In the other that he submits to only those necessary interferences and regulations which the public interests require. In the one he expresses his willingness to do the work of the state, aware that the state in the discharge of its public duties is not guided solely by a question of profit. At any rate, it does not perform its services with the single idea of profit. Its thought is the general public welfare. If in such a case an individual is willing to undertake the work of the state, may it not be urged that he in a measure subjects himself to the same rules of action, and that if the body which expresses the judgment of the state believes that the particular services should be rendered without profit he is not at liberty to complain?"

The argument of counsel for Commission on this point states the case so well that we make it a part of our conclusions:

"Indeed, it would be difficult to state the law applicable to this case with greater force and clearness than it is stated by Mr. Justice Brewer in the Kansas City Stock Yards case. In that case he compared the business of a stockyards with ordinary merchandising, as distinguished from the business of a common carrier. The former carries on its business at a fixed place, occupying ground acquired by it by private purchase. It has none of the elements of a quasi-public corporation. Neither the penning and feeding of stock nor the buying and selling of the same bears the remotest analogy to any governmental function. On the other hand, transportation for the public over highways of the public, made possible only by the surrender of beneficial rights in the public highways as well as the right to appropriate private property, is clearly a quasi-governmental function. In most countries the operation of railroads has been treated as a governmental function pure and simple. In this country it has been the policy to bestow upon corporation enterprises such portion of the governmental authority as seemed necessary to enable such enterprises to carry on the business of transportation. But it is admitted everywhere that in order to carry on such a business successfully the power of government must be exercised directly or it must be exercised through the beneficiaries of a special grant of power."

"Express companies are essentially auxiliaries of railroad companies. To a degree the Federal government is engaged in the express business. A formidable competitor of the express companies is the United States postal service. No service performed for the public falls more clearly within the definition of public service laid down in Mr. Justice Brewer's opinion than does the business of express companies. This being true, the test of a rate's reasonableness is whether or not it earns more than a fair return upon the actual value of the property *engaged in the public service*."

To attempt to comment on or review the 1,300 pages of testimony

taken in this proceeding would be impracticable. We have carefully considered the evidence in the light of the reasons we have given and we find and conclude:

I. That express rates in the State of Indiana are excessive and unreasonable and that we should recommend a reduction of these rates from present rates as shown in the express tariffs and rules attached hereto.

II. Express companies do not take up and deliver throughout this State as the law and their obligations and charges require them to do. In the rates recommended herein, a reduction will be made in the charges of these companies in all cases where they fail to perform this service.

III. Some of these express companies discriminate in that they deliver to some persons and fail to deliver to others in the same city and towns. In other words, they make arbitrary limits of delivery not warranted by their obligations and the law. We shall continue to enforce the law by bringing suits against these companies in cases of such discriminations.

To illustrate the effect and scope of the proposed reduction in rates, we append hereto a report from our traffic department showing present rates and the rates hereby recommended for future observance from the principal cities to other points in this state.

The proper orders and recommendations to enforce our findings and conclusions will be accordingly made and entered.

COMPARISON OF EXISTING AND REDUCED EXPRESS RATES ON MERCHANDISE.

"In all cases where the present effective rates of the express companies are lower than the rates named in the foregoing schedule, such present effective lower rates shall apply." (See schedule *infra*.)

STATE OF INDIANA

RAILROAD COMMISSION OF INDIANA.

No. 143. Inquiry Concerning Rates, Discriminations, and Practices of Express Companies in the State of Indiana.

In this proceeding it appears that twenty days' notice of the purpose of the Commission to make this investigation was duly given to the American Express Company, Adams Express Company, United States Express Company, Wells-Fargo & Company Express Company, Pacific Express Company, and the Southern Express Company, and it further appears that said

carriers have become respondents hereto by appearing at the hearing by their counsel and duly authorized representatives and that this matter was fully heard, investigated and understood; thereupon the Commission now finds that the rates charged by said respondent carriers on their lines entirely within the State of Indiana, that is to say, the merchandise rates and the general special rates applied and in force by said carriers in the State of Indiana, are excessive and unreasonable. And the Commission having determined that just, reasonable, undiscriminative and non-prejudicial rates are as set out hereinafter in the schedule attached hereto, the Commission hereby recommend to the said carriers, said respondents, the adoption and observance of such rates in the future, unless the same are hereafter altered, changed, or modified by the Commission.

It is further ordered, That the secretary shall deliver to the said respondents, a certified copy of the findings and recommendations of the Commission in this proceeding.

EXPRESS TARIFF NO. 1-A.

See Notes 1, 2, 3, below. Schedule of Maximum Express Rates Expressed in Cents.

Merchandise Rate per 100 lbs.	25	30	35	30	35	40	40	45	50	60	65	70	80	85	90	90	95	100	115	120	125	140	145	150	165	170	175	175	180	185	190			
General Special Rate per 100 lbs.	20	25	30	20	25	30	25	30	35	40	45	50	55	60	65	65	70	75	80	85	90	105	110	115	125	130	135	135	140	145				

NOTE 1.—Rates named in column "A" apply when neither "collecting" nor "delivery" service is provided by express company.
 NOTE 2.—Rates named in column "B" apply when either "collecting" or "delivery" service is provided by express company.
 NOTE 3.—Rates named in column "C" apply when both "collecting" and "delivery" service are provided by express company.

Note 4. The classification, rules and regulations of the express companies now in force on their lines in the State of Indiana, and on file with this Commission, so far as they are not inconsistent with these recommendations and the application of rates named herein, may be continued in effect by said companies.

Note 5. Any administrative rule necessary to carry into effect the schedule of rules hereby recommended by the Commission may be put in force by the express companies subject to the approval of the Commission.

Note 6. In all cases where the present effective rates of the express companies are lower than the rates named in the foregoing schedule, such present effective lower rates shall apply.

Note 7. The rates, in cents, in the foregoing schedule shall apply on shipments transported by a single express company, except that when one express company operates over two or more independent lines of railroad the joint short line mileage of such lines of railroad shall be employed in determining the express rates applicable between points on one and those on another of such lines of railroad, unless the shipper shall direct in writing shipment to be made by the longest route, in which event such longest route rate shall apply.

Note 8. When the rate is not given for the exact distance, apply rate named for the next greater distance, and when the exact number of pounds is not shown, take the next greater number.

Note 9. The charge for shipments weighing 100 pounds or over will be ascertained by multiplying the weight by the rate per 100 pounds shown at the bottom of the column which has at its top the distance which the shipment moved. Example: The rate per 100 pounds for fifty miles being 40 cents, the correct charge for 150 pounds multiplied by the rate 40 cents, which makes 60 cents. When the rate between any two points is not given in the schedule and the next higher rate must be used, a greater charge shall not be made than for 100 pounds at the actual rate.

Note 10. The charge for carrying a package weighing less than 100 pounds is found opposite the number of pounds shipped shown in the column at the top of which is shown the distance which the shipment is to move.

Note 11. Joint rates shall be made by adding together the rates prescribed herein for application to and from points of interchange by express companies, and then deducting from the sum thus obtained twenty per cent. (20%) of such sum.

Note 12. When two or more express companies operate between the origin point and the destination, the through merchandise rate shall be computed on the mileage of the company having the shortest through line, and the same rule will apply as to joint rates.

Note 13. When a special rate applying to or from a point of interchange is less than 80 per cent. of the regular mileage rate, then such special rate entire should be used in connection with 80 per cent. of the regular mileage rate applicable over the balance of the route in making the through rate.

Note 14. All matter must be charged for at actual gross weight at time of shipment, unless otherwise specifically provided for herein.

Note 15. Estimated weights may be used on shipments usually made

with ice for preservation, and it is used for that purpose only. When no ice is used, charge must be on gross weight.

Note 16. On matter subject to extra rate, as one and one-half or double rate, find graduated charge according to tariff, and then add one-half or double it, as required.

Note 17. Two or more packages bound or tied together by the shipper, forwarded at the same time to the same consignee, must be charged for on the aggregate weight.

Note 18. Unless otherwise provided herein, a minimum charge applies on a single shipment for each company carrying, except that where through way-billing is in effect, the charge will be the same as if carried through by one company.

Note 19. In no case shall the rates between two given points exceed the sum of the rates applying between such given points and a point intermediate.

Note 20. When there are two or more express routes between points, one of which is more direct, or over which express matter can sooner reach its destination, the shipper shall have the right to designate in writing the route over which his shipment shall be transported. When express matter is so tendered and routed by the shipper, his agent or attorney, it shall be the duty of the express company or companies forming such designated route to accept and transport the shipment so routed, as above provided, noting upon receipt and way-bill "Routed in Accordance with Shipper's Instructions."

LIVE POULTRY.

When merchandise

rate is	35	40	50	70	90	1.00	1.25	1.50	1.75	1.85	2.00
---------------	----	----	----	----	----	------	------	------	------	------	------

Rate on live poultry

is	35	40	50	70	70	75	90	1.10	1.25	1.45	1.50
----------	----	----	----	----	----	----	----	------	------	------	------

SCALE K.

Scale of rates on ale, beer, bishop's beer, cider, coca cola, ginger ale, moxie, pop, soda, mineral and spring waters.

(a) No single shipment less than 30 cents. Charge pound rates.

(b) These rates apply to soda water and pop only when in cases covered with wood or in closed barrels; in cases not so covered merchandise rates apply.

When the merchan-

dise rate per

100 lbs. is	35	40	50	70	90	1.00	1.25	1.50	1.75	1.85	2.00
------------------	----	----	----	----	----	------	------	------	------	------	------

The special rate per

100 lbs. on ale,

beer, etc., will be	30	30	35	40	55	55	70	80	95	1.00	1.10
---------------------	----	----	----	----	----	----	----	----	----	------	------

These rates are subject to the same ratio of reduction applying on general special rates herein, as prescribed in Notes 1, 2 and 3.

FRUITS AND VEGETABLES.

Charge at pound rates; minimum charge 30 cents, unless graduated rate is less.

When the merchan-

dise rate per

100 lbs. is. 35 40 50 70 90 1.00 1.25 1.50 1.75 1.85 2.00

Special rate on fruit

and vegetables

per 100 lbs. will

be 30 30 35 55 70 75 80 90 1.15 1.25 1.25

These rates are subject to the same ratio of reduction applying on general special rates under conditions named in Notes 1, 2 and 3 to the Commission's tariff.

A. R. 159. Violation of Full Crew Law.

Since our last report this case has been appealed to the Supreme Court of Indiana, where it is now pending. Briefs have been filed on behalf of the Commission by the Attorney-General and by Hon. Martin Hugg, special counsel.

A. R. 160. United States Cement Company v. Southern Indiana Railway and the Baltimore & Ohio Southwestern Railroad Companies.

Since our last report, an action has been commenced by the Commission in the Circuit Court of Bedford County to enjoin further disobedience of its order fixing the rate on coal from the Linton district to Lehman. C. E. Thompson and Henry P. Pearson were employed to represent the Commission. The case was argued at Bedford by Commissioner Wood and these counsel, and the injunction was made perpetual. The defendants appealed to the Supreme Court and the matter is now pending.

A. R. 164. Connections between Railroads at Connersville.

An application for a writ of mandate has been made in this case. The defendants have asked for a change of venue. The matter is in charge of Hon. James W. Noel, special counsel, and is still pending.

A. R. 203. Marion, Bluffton & Eastern Traction Company v. Cleveland, Cincinnati, Chicago & St. Louis Railway Company, and Toledo, St. Louis & Western Railroad Company.

This is a case arising out of a controversy of the Marion, Bluffton & Eastern Traction Company and the Cleveland, Cincinnati, Chicago & St. Louis, and Toledo, St. Louis & Western Railroad

companies, concerning a crossing in the city of Marion and the matter of installing an interlocker was discussed with the Commission. As the crossing to be protected was in the business part of the city it was not deemed best by our engineer, to whom the matter was referred, that an interlocker be established. The Marion, Bluffton & Eastern Traction Company and the Cleveland, Cincinnati, Chicago & St. Louis Railway Company finally entered into a contract under the provisions of which the former might cross the tracks of the latter in the city of Marion—it was therefore not necessary for the Commission to take further steps and the case was closed.

A. R. 250. Passenger Station at Rushville.

This matter is pending.

A. R. 252. Rates to and from New Albany on the Kentucky & Indiana Bridge.

Since our last report correspondence between business men of New Albany and the Commission following the visit of Chairman Hunt and Commissioner Wood to New Albany to inquire into complaints by the Commercial Club of that city resulted in an investigation of interstate as well as intrastate rates of the Kentucky & Indiana Bridge and Railroad Company between New Albany and Louisville. This matter was assigned to Commissioner Wood and on December 11, 1907, he had before him certain business men of New Albany and W. M. Michell, general manager of the Kentucky & Indiana Bridge and Railroad Company and other witnesses. It appeared from this examination that there were two tariffs in effect for traffic over this bridge. One of these tariffs was a local tariff, the charges being two or three times more than the rates on the through tariff. This local tariff was applied to all business coming to Louisville from the south destined to New Albany over the K. & I. bridge. The through tariff was applied to all business coming to Louisville from the south destined over the K. & I. bridge to points beyond New Albany. Commissioner Wood reported to the Commission that he was of the opinion that the same charge or tariff should be applied to both shipments. Accordingly a petition was prepared by him and presented to the Interstate Commerce Commission. Mr. Henry M. Dowling, then in the Attorney-General's office, assisted as counsel in the case. Examiners were appointed by the Interstate Commerce Commission, who heard the complaint at Indianapolis in April, 1908. A brief was submitted by Commissioner Wood and Mr. Dowling.

The Interstate Commerce Commission sustained the contention of the Railroad Commission of Indiana, and in case No. 1406, Railroad Commission of Indiana v. the Kentucky & Indiana Bridge and Railroad Company et al., held as follows:

"Upon consideration of all the facts presented we are of opinion, and so hold, that traffic originating at points south of Louisville, destined to New Albany, or originating at points north of New Albany and destined to Louisville, is through traffic, and in the absence of a joint through rate the rates applicable on such through business when it reaches either Louisville or New Albany are the rates set forth in 'Bridge Tariff No. 18.' The Commission will not make an order in this case as it must assume that the carriers will apply the rates legally applicable to the business moved, and in the event of failure to apply such rates the law prescribes appropriate and drastic penalties for such noncompliance."

A. R. 253. Switching Coal at Losantville.

Beeson & Segraves, of Losantville, Indiana, complained that a car of coal shipped to them by the American Coal and Coke Company, of Michigan, which was ordered routed for Big Four delivery, was shipped via C., C. & L. R. R., and that the Big Four refused to receive the same and switch it to their siding on which the coal bins of the said Beeson & Segraves were located. This being an interstate matter, the Commission could not take it up on formal complaint, but took it up with the Big Four Railroad by a personal conference with Mr. Ford Woods, the assistant general freight agent, and were advised by him that it was not the purpose of the Big Four lines to violate the law, and he did not come within the jurisdiction of the Commission. Before the matter was adjusted Beeson & Segraves hauled the coal to their bins, and as there has been no further complaint made, we take it that there has been no further trouble about the interchange of switching between the two railroads at Losantville.

A. R. 259. Coal Rates at Kimmell.

Since our last report the Commission is advised that through rates on coal had been put in by the Vandalia and the C. & E. I. acting in conjunction with the B. & O. R. R. Company.

A. R. 277. Inadequate Depot at Corydon Junction.

Since our last report, the Commission has corresponded with C. H. Buchanan, Superintendent of the L. N. A. & C. R. R. Co., with reference to the depot at Corydon. Mr. Buchanan has agreed to take the matter up with the Southern Railway, which uses this station in conjunction with the L., N. A. & C. R. R. The matter is still pending.

A. R. 279. Rough Handling of Freight on the Southern Railway.

This matter has been considered with the Southern Railway and its manager has assured the Commission that the trouble will be corrected. No further complaint has been made.

A. R. 285. Rates on Straw.

The traffic manager of the Columbia Enameling and Stamping Company filed with the Railroad Commission of Indiana a claim for seven dollars (\$7) refund on overcharge on account of alleged discrimination in straw rates. It developed in the investigation of this case that the complainant was charged seven cents (7c) per hundred on straw from Perrysville to Terre Haute while another manufacturing concern was charged three and one-half cents (3½c) per hundred weight. This the complainant claims was discrimination. The facts presented, however, show that the three and one-half cent rate was granted as a milling and transit rate, the manufacturers' receiving such rate manufactured the straw into paper and other goods and shipped it out as a finished product, while the Columbia Enameling and Stamping Company used the straw it received for packing and shipping out its wares. The Commission decided that said company was not, under these conditions, entitled to the milling and transit rate, and the railroad was, therefore, not guilty of discrimination. It was suggested to the complainant that while the respondent company was not guilty of discrimination that he might file a complaint charging excessive freight rates if he thought such rates were excessive, but as no further complaint was made, the case was closed.

A. R. 287. Terminal Charges at New Albany.

This matter is still pending.

A. R. 288. Checking Excess Baggage over C., C., C. & St. L. Ry.

Complaint by J. R. Crawford against the Big Four Railway for fixing a limitation of value upon baggage shipped under the provisions of the excess baggage law. The Commission advised that if the injury to the traveling public proved to be real, the matter would be investigated.

A. R. 289. Violation of the Full Crew Law by the Pittsburgh, Cincinnati, Chicago & St. Louis Railway Company at Richmond, Indiana.

This is a complaint charging the above named railroad with running its train in violation of the full crew law. As the questions involved in this case are involved in litigation now pending in the

courts, it was not deemed necessary by the Commission to take any steps in this specific instance until its rights and powers in cases of this character had been passed on by the Supreme Court.

A. R. 290. Excess Passenger Fare—Failure to Keep Open Station at Jamestown.

In January, 1908, John L. Winter addressed a communication to the Railroad Commission of Indiana complaining that he had been charged excess fare between Jamestown and Indianapolis, and alleging that Jamestown, Indiana, is a regular schedule stop for all cars on this line, and that an office and agent is maintained there and that said agent is authorized to sell tickets; that the regular fare for regular tickets from Jamestown to Indianapolis, is 45 cents. On November 7, 1907, he was at the station of said traction company at Jamestown at 8:30 p. m. endeavoring to purchase a ticket, but the agent was gone and when he offered to pay the conductor on the car that he was charged 55 cents, or 10 cents more than the ticket fare. This matter was taken up with Mr. A. E. Reynolds, president of the I. C. & W. Traction Company, and by Mr. Reynolds referred to the proper officials of that line; later the Chairman of the Commission held a conference with a number of officials of said traction line and at their suggestion the matter was taken up by correspondence with Mr. A. M. Hughes, general manager of said line. It was suggested to Mr. Hughes that the cause of complaint might be removed by charging all passengers the same rate of fare regardless of where they get on the car; that is, it was suggested that if a passenger boarded a car at a street crossing in Jamestown, or just outside of Jamestown, that he should be charged no more than the passenger who had the opportunity to purchase a ticket at the station. Mr. Hughes answered this suggestion as follows:

File A. R. 290.

"Chicago, February 4, 1908.

"Union B. Hunt, Chairman Railroad Commission of Indiana, Indianapolis, Indiana:

"Dear Sir—Your letter of January 31 received. We will solve the problem of readjusting our rates as soon as possible so that the same rate of fare will prevail from road crossings and at regular stations. It will take a little time to work this out, but we shall give it diligent attention. Trusting that this will be satisfactory, I am,

"Very truly yours,

(Signed)

"A. M. HUGHES."

The Commission has not been advised as to whether this promise of Mr. Hughes has been complied with or not, but having heard

no further complaint, we assume that it was and that the suggestions of the Commission have been carried out.

A. R. 291. Passenger Depot at Deedsville.

Application for new passenger station at Deedsville. A conference with the superintendent of the L. E. & W. resulted in an agreement by the latter to rebuild as soon as financial conditions improved. This cause has been transferred to the regular docket, as No. 239, which see.

A. R. 292. Differential in Block Coal Rates.

Complaint by Geo. G. Pope & Co., concerning differential in block coal rates on the C. & E. I. Railroad. Upon investigation the Commission ascertained that the difference in coal rates was justifiable, and all parties interested were accordingly so notified. Closed.

A. R. 293. Classification of Motor Vehicles.

Complaint by the Economy Motor Company and others, concerning the classification of motor vehicles. In the course of correspondence with the chairman of the classification committee, the Commission was informed that changes would be made in the classification and if the same were not approved by the carriers interested they would become effective in a supplement to the official classification. The complaining parties were advised of the intended changes and the matter there rests.

A. R. 294. Movement of Live Stock.

Complaint by Howell, Tibbs, Gish & Co., concerning improper movement of a carload of live stock by the Big Four Railroad. The matter was taken up with the general superintendent of the Big Four, who advised that the action complained of was the result of an error of the railroad, and that the latter would make good any damage. Complainants were given this information, and the Commission requested notice from them of final adjustment. The matter there rests.

A. R. 295. Rules for Interurban Railways.

Circular No. 19 issued calling a conference of managers, superintendents and dispatchers with the Commission. The conference was held and committees appointed, to report. On these reports coming in, a book of rules was prepared and considered and approved by the Commission, and the same has been made effective by the companies. These rules will be found *infra*.

A. R. 296. Reconsignment of Cars.

Complaint by E. A. Bonham for refusal by Big Four Railroad to reconsign coal without repayment of freight. On investigation the Commission concluded it had no authority to require the railroad to extend credit to the complainant. Closed.

A. R. 297. Corn Shipments with Stop-over Privilege.

Complaint by Catterall Bros. against the C. & E. I. for refusal to bill corn via Vandalia with stopover at Indianapolis for cleaning and shelling. The Commission conferred with the railroad officials and secured the movement of two cars then awaiting shipment, with stopover privilege; the complainant to file a formal complaint alleging discrimination. The matter was thus closed.

A. R. 298. Removal of Depot at Sellersburg.

Protest from citizens of Sellersburg against removal of the Pan Handle depot. Upon investigation the Commission concluded that for the present the removal should not be made; but such removal might later become advisable if the neighboring town of Speeds continued to increase in population. The matter was closed. The report of Commissioner McAdams upon the subject was as follows:

The P., C., C. & St. L. Railway, Louisville division, runs almost north and south through Sellersburg, in Clark county. This is a regularly constituted municipality, having a population of about one thousand, and is situated entirely on the west side of the railway. The village has the usual characteristics of a place of that size, that is, a business center, schools, churches, merchants, business houses, physicians, laborers and retired citizens, and a few well-improved streets and sidewalks, and the usual accessories found in all fairly prosperous agricultural and manufacturing communities. The passenger and freight station of the railway company as now located is about 750 feet south of the center of the eastern built-up portion of the town. The station is not a modern one, but is sufficient. To the north of Sellersburg is the village of Speeds, situated on each side of the railway and having an estimated population of 300. This village is not incorporated and is the center of the principal industry in that community—the mills of the Louisville Cement Company, a great number of whose employes live at Sellersburg. The total distance from the north limits of Speeds to the south limits of Sellersburg is 8,000 feet, and the distance between the built-up portions of the two villages is about 3,000 feet.

During the last year a traction line has commenced operations in this territory and runs from Louisville to Indianapolis. This line passes over the principal street in Sellersburg, thence north on such street and the county road to a point midway between the two villages, from which it proceeds north on the public highway, paralleling the steam line immediately on the west through Speeds towards Indianapolis. The railway com-

pany formerly maintained an agent, but no station, at Speeds, where it stopped its local passenger trains and did a freight business. After the coming of the traction line receipts were so materially reduced that the agency was withdrawn and the local business is now transacted at Sellersburg. All the carload business connected with the factory at Speeds, we are informed, is handled either at Jeffersonville or Louisville, where the company has its principal offices.

There is another small community located southeast of Sellersburg at what is known as Belknap, the site of another cement mill. This community is served by the depot as now located.

Acting on a suggestion made by the Commission's Chief Inspector, the railway company is now proposing to abandon the depot at Sellersburg and move it to a point midway between the two villages, that is, move it thirty-five hundred (3,500) feet northward from its present location and towards Speeds, so that it will be when relocated twenty-seven hundred and fifty (2,750) feet nearer the site of the former stop at Speeds than it now is. The proposed location would be near one thousand feet beyond the corporate limits of Sellersburg and on a public highway which, for all its length from the corporation line north through Speeds is unimproved. There is no room for station grounds at this point, and the company proposed to still maintain its sidings and team tracks at both Sellersburg and Speeds as at present located so that carload shipments or team track work would have to still be handled at the present locations.

The assumption of the inspector was, and it is claimed by some that these towns are, or would eventually be, one, and that the industry is at Speeds and the people are at Sellersburg. These assumptions are partly true and partly false. These villages may unite and they may not. From statements made by the superintendent of the railway, we are led to believe that the ultimate result in the cement industry in that locality is yet a problem; that several small factories have ceased to operate, and that unless late improvements and new discoveries shall give it a new impetus some other factories will be compelled to yield to local conditions, which are not advantageous for competition. If these villages continue to grow and become more closely related with improved streets and common purposes and advantages, including police protection throughout the territory, then we believe they should be served from a central location, if one can be secured to serve the purposes, but at this time we are of the opinion that more people will be better served and that the convenience of the public as a whole will be best accommodated, and that the railway company will more nearly discharge its duty by continuing the present station at Sellersburg until such time as events shall determine what shall be the ultimate action of the company.

A. R. 299. Gravel Rates.

Informal complaint of gravel rates from Gosport to Bloomington. After correspondence with the railroads concerned, the Commission was of the opinion it could do nothing further without a formal petition being filed.

A. R. 300. Carload Minimum.

Complaint by Dauner Coal Company concerning minimum car weight of coal. A conference being held with the complaining parties and the railroad, it was agreed the latter would adjust the overcharge and correspond with the Commission on proposed changes in language of billing instructions.

A. R. 301. Interchange of Traffic.

The commercial Club of Muncie furnished copy of its resolutions against the threatened action of the Big Four and L. E. & W. railroads in refusing to interchange traffic with the C., C. & L. Railroad. The matter was referred to the Attorney-General, with the request to sue to enjoin this action. The suit was instituted in Delaware County against the Big Four and L. E. & W. and removed by the defendants to the United States Circuit Court, where a restraining order granted by the Delaware Circuit Court was dissolved. Subsequently the matter was amicably adjusted and the defendants are now interchanging traffic with the C., C. & L. Railroad.

A. R. 302. Non-publication of Rates.

Complaint by Lafayette Manufacturers' and Shippers' Association of practice of railroads in moving freight on rates other than those in tariffs filed with the Commission. The Commission ordered that carriers have no authority to move freight between points in Indiana except upon rates published and on file with the Commission.

A. R. 303. Passenger Train Service at Queensville.

Petition for better train service. The matter was transferred to the regular docket. See No. 248.

A. R. 304. Failure to Pro-rate on Freight Rates.

Dixon W. Place, of Walkerton, Indiana, complained to the Commission that he had been compelled to pay excessive rates on shipments of freight from North Liberty, Indiana, to Cottage Grove, Ohio. Rates as charged were furnished to the Commission and being an interstate matter, was taken up by this Commission with the Interstate Commerce Commission, and after investigating the matter the Secretary of the Interstate Commerce Commission advised the Railroad Commission of Indiana that the rates charged were entirely within the law and the matter was therefore dropped.

A. R. 305. Improvement of Passenger and Freight Facilities at Girls' Industrial School, at Clermont, Indiana.

On February 1, 1908, the Executive called the attention of the Commission to delay in handling cars to and from switch from the Cleveland, Cincinnati, Chicago & St. Louis Railway Company to the Girls' Industrial School at Clermont, Indiana, and consequently accruing demurrage charges, and later, on July 17, 1908, the Executive called attention of the Commission further to a lack of proper passenger and freight facilities at the Girls' Industrial School; and the matter was assigned to Chairman Hunt. The side track was paid for by the State and no passenger facilities were erected by the Railroad Company. The matter was taken up with the Cleveland, Cincinnati, Chicago & St. Louis Railway Company, and the company agreed to construct suitable shelter sheds and cinder platform at the school and stop passenger trains on signal at that point and in the future to extend the siding under a temporary arrangement satisfactory to the board of directors of the Girls' Industrial School. The shelter shed and platform have been erected and the Commission has been given to understand by the Railroad company that it will carry out its agreement relative to the future extension to the side track. Car service had accrued on cars of coal for the institution and after full investigation the Commission approved a refund of the demurrage charges.

A. R. 306. Overhead Clearance.

Complaint filed by Capitol Machine Works concerning overhead obstruction over Big Four track. After consideration the Commission concluded the law governing clearances did not apply and the matter was closed.

A. R. 307. Removal of Switch at Valparaiso.

W. B. Hutchinson, of Valparaiso, Indiana, complained of the Chicago, Cincinnati & Louisville Railway Company and alleged that said company had taken up two switches for which he had paid \$450 the preceding spring; that the Chicago, Cincinnati & Louisville Railway Company refused to replace these switches notwithstanding the fact that they had been paid for by the petitioner; the petitioner further alleged that he had a large amount of public road to construct and that he should be greatly delayed and injured if these switches were not promptly replaced. A copy of Mr. Hutchinson's letter and complaint was forwarded to James P. Goodrich, receiver of the Chicago, Cincinnati & Louisville Rail-

way Company, at Chicago, and Mr. Goodrich replied under date of April 11, 1908, stating that he had had an agreement with Mr. Hutchinson and that Mr. Hutchinson expressed himself as thoroughly satisfied with the adjustment of the matter. Later Mr. Goodrich forwarded to the Commission some correspondence with Mr. Hutchison in which was a letter making reference to a check for \$120 for which the Chicago, Cincinnati & Louisville Railway Company was to replace what was known as switch No. 3. The receiver of the Chicago, Cincinnati & Louisville Railway Company replied to Mr. Hutchinson acknowledging receipt of check for \$120 and agreeing on or before April 10, 1908, to construct a switch 300 feet long in the clear, at what was known as "Seiver's Crossing," and where the switch known as switch No. 3 was located last year. This switch the railroad agreed to maintain during the year 1908 with the right to remove it any time after January 1, 1909. The receiver also agreed to make deliveries and switch material for Mr. Hutchinson at least three times each week providing that all freight charges were prepaid and all demurrage charges adjusted and paid once each week. This did not seem to be entirely satisfactory to Mr. Hutchison, who in reply to this letter of the receiver of the road said that it would be impossible to adjust the demurrage once each week unless the receiver would send his agent to the switch for the purpose of making collections. Mr. Hutchinson further said that if these conditions were satisfactory the contract might be considered closed. To this letter Mr. Goodrich replied, saying that neither Mr. Hutchinson's letter of the 19th nor his reply thereto, should in any way change the contract between the company and petitioner. Mr. Hutchinson later addressed a letter to the Commission in which he said that the arrangement was not entirely satisfactory, but inasmuch as the road was in the hands of a receiver he did not think it advisable to bring suit, and so the matter was adjusted upon the basis of the statement set out in the letter of the receiver.

A. R. 308. Passenger Train Service at Charlestown.

Complaint by James N. Turple and others concerning passenger train service at Charlestown. The matter was taken up with the general passenger agent of the B. & O. S. W. Railroad.

A. R. 309. Protecting Street Crossing in Sharpsville.

Petition by M. J. Snyder and others for protection of street crossing. The Commission met the general manager of the Indiana

Union Traction Company at Sharpsville, and concluded that the latter road and the L. E. & W. Railroad should issue speed orders for Sharpsville, reducing the speed of trains to six miles per hour. This was subsequently increased to ten miles per hour. All parties were accordingly so notified. Closed.

A. R. 310. Dangerous Highway Crossing at Knightstown.

Complaint by C. C. Barrett of dangerous condition of highway crossing. The Commission visited the premises, and made recommendations to the Big Four and Pan Handle for protection of the crossing. The preliminary and final reports of Commissioner Wood in this matter were as follows:

PRELIMINARY REPORT.

To the Railroad Commission of Indiana:

I beg leave to report that on March 30th I went to Knightstown to look at the condition of the crossing of the Big Four and Pennsylvania railroads, of certain highway crossings west of that town. Mr. Barrett and some other citizens were present and Mr. E. Ohliger, superintendent of the Pan Handle Railroad, and Mr. S. T. Blizzard, superintendent of the Big Four Railroad, were present, representing the railroad companies.

I find that these crossings are unquestionably in bad condition. I have some idea as to how they may be best improved, but after hearing both sides I thought it best to have the railroad companies send out their engineers with the view to suggesting the best and most economical plan for putting these highway crossings in safe and passable condition. After the suggestions of the engineers are made I will take the matter up again with the parties concerned and make a final report and recommendation.

FINAL REPORT.

Hon. Railroad Commission of Indiana:

Gentlemen—In the above matter I beg leave to report that I have made a personal inspection of the condition of the highway crossings west of Knightstown of the Big Four and Pennsylvania railroads and have thoroughly examined this matter, aided by the superintendents and engineers of the railroad companies, with whom I have been frequently in conference about this matter.

First. In accordance with the suggestion made by the Big Four people I have recommended that they install electric bells at the two highway crossings of their road at that point.

Second. And after a final conference with Mr. Ohliger, superintendent, and Mr. Robinson, engineer, I have concluded that the very great expense of separating the grade of the highway and Pennsylvania Railroad at this point for the present is almost prohibitive, and the view of trains approaching either way on that road being good, I have concluded that for the present the improvement of the grade of the highway and greatly widening the highway at the point where it crosses the railroad will be the best that can be done.

Third. For full and adequate protection of these crossings it would be necessary to have the location of one of the highways changed and to get the consent of the county commissioners of the county for this purpose.

I have arranged for a final conference with the citizens who made the complaint to the Commission in order to advise them fully what steps it may be best to take in the future.

A. R. 311. Switching Cars from C. & E. I. to the Vandalia Railroad.

E. C. Wilder & Co., of Brazil, Indiana, advised the Commission that they were having difficulty in getting cars transferred from the Chicago & Eastern Illinois Railroad to the Vandalia track to be unloaded, the Vandalia people refusing to accept cars for placement on their unloading track unless such cars come in over the Vandalia's own lines. They advised that they had some cars that were waiting on the side track of the Chicago & Eastern Illinois which the Vandalia refused to switch. The Commission took the matter up with the freight department of the Vandalia and arranged to have the cars switched pending the final settlement of the controversy. After placing a number of cars the Vandalia Company refused to place others, contending that the "shippers' bill," under which it was contended by Wilder & Co. that cars should be switched, was unconstitutional and void. The Commission advised that if anything further was done in the matter a formal hearing would be necessary, but at the time of making this report such hearing has not been asked for by any of the parties to the controversy.

A. R. 312. Rates on Sand and Gravel.

Petition by Mount Vernon Construction Company against Illinois Central Railroad, asking for rates on sand and gravel from New Harmony to various points. The matter was taken up with the railroad by the Commission and a rate of 30 cents, satisfactory to petitioners, was put in. The matter was closed.

A. R. 313. Charges Against Agent of Chicago & Eastern Illinois Railroad Company, at Stone Bluff, Indiana.

On March 24, 1908, complaint was made to the Commission that the agent of the Chicago & Eastern Illinois Railroad Company, at Stone Bluff, Indiana, conducted himself in an ungentlemanly and offensive way toward the people of Stone Bluff and used obscene and blasphemous language to women as well as men who might come in contact with him. The matter was assigned to Chairman

Hunt. The Commission sent its inspectors to investigate the facts and after full consideration felt it was not warranted in any action in the matter and the same was accordingly dismissed.

A. R. 314. Passenger Rates on Traction Lines.

Complaint concerning rates of passenger fares on traction lines. The following opinion was delivered by McAdams, Commissioner:

In April last Mr. C. T. P. Bass informally complained to the Commission that on February 21, 1908, he was charged 10 cents by the Indiana Union Traction Company for passage on its limited interurban car between Fortville and Ingalls, a distance of 2.84 miles.

At the same time R. R. Short informally complained that he had been charged 10 cents for passage on the Indianapolis, Columbus & Southern Traction Company between Station No. 68, Short's road, and Seymour, a distance of $2\frac{1}{2}$ miles.

The facts in these complaints were submitted to the carriers interested and their counsel have filed briefs with the Commission, which present the following questions for consideration:

1. Does the act approved February 25, 1907, establishing a maximum passenger fare of two cents per mile, apply to interurban railroads?

2. If the act last above mentioned does apply to interurban lines, may they not charge an excess fare for service on their limited cars, which are better equipped, more convenient and make better time than their local cars?

3. Ingalls, Fortville and Seymour are each incorporated, and the traction companies operate on their streets. When their respective franchises were granted the traction company in each instance was given permission to charge 5 cents for a single passenger fare within the corporate limits. These franchises were granted and accepted prior to the enactment of the maximum rate law above mentioned. It is claimed that in the first case the Indiana Union Traction Company could charge 5 cents for its service in Ingalls, 5 cents for its service in Fortville and 5 cents for its service between these towns and yet be within the provisions of the maximum rate law, and it is likewise contended that the Indianapolis, Columbus & Southern Traction Company could charge 5 cents for its service in the city of Seymour and a like sum for its service between Seymour and Stop No. 68.

The Commission finds as to the first two propositions above stated that it is not necessary at this time to express its views in this investigation, and therefore leave those questions open for further consideration, if occasion shall require.

We have heretofore held that an ordinance granting the right to an interurban railroad to operate on city or town streets and fixing the railroad service in the municipal territory constitutes a contract when acted upon by the company, and that such a contract is entitled to the protection furnished by the contract clause of the federal constitution, and that such an ordinance cannot be impaired by subsequent legislative enactments. (Report of 1907, p. 279.) We have again examined the question and find

no reason for changing the views then expressed. The rule, declared by the Supreme Court of the United States, which is the final authority on this question, seems to be uniform and to cover the questions raised by the third proposition above stated, and to decide the same in favor of the contention of the interurban lines. By these decisions we are bound and cheerfully abide, not only because they state the law, but are, as applied to this inquiry, seemingly fair and just.

City Railway Co. v. Citizens' St. Ry. Co., 166 U. S. 556.

Detroit v. Detroit Ry. Co., 184 U. S. 368.

Cleveland v. Cleveland, etc., Ry., 194 U. S. 517.

The Commission being of the opinion stated as to the law applicable to this inquiry, it results in our holding, as we do, that there was no violation of the law in the cases under investigation.

A. R. 315. Highway Crossing near Delmar.

Complaint from board of commissioners of Putnam County regarding highway crossing near Delmar. The matter was taken up with the Big Four Railroad by correspondence and the Commission visited the crossing in question. After investigation the Commission concluded:

First. That the highway crossing at this point ought to be above grade.

Second. That the railroad company should be permitted to place the overhead bridge at a point 584 feet west of the present crossing.

Third. The parties present seem to acquiesce in this conclusion of the Commission, this being plainly the best thing to do. The county commissioners will facilitate by all means in their power the change of the highway and division engineer will report the views of the Commission to his company.

A. R. 316. Interlocking Reports.

Correspondence with the Pennsylvania Railroad concerning interlocking reports. The Commission responded as follows:

"As the Commission is now advised, an interlocking plant installed for the convenience of the operating company to control tracks at junction points on its own lines and where no other railroad companies' tracks are crossed are not interlocking plants within the meaning of the law of this State, and you do not have to present plans for such plants for the approval of the Commission, or invite its inspection before placing the same in operation. You are further advised that monthly and bi-monthly inspection of these interlocking plants are not required under the rules of the Commission.

"You are further advised that, in the judgment of the Commission, such plants are subject to the control of the Commission in so far as they

affect safety in the operation of the railroad, the same as any other appliance used by the company, but this authority to control is found in the general law and not in the law concerning interlocking appliances."

A. R. 317. Rates on Lumber over Monon and Vandalia.

Complaint by S. P. Coppoch & Co. concerning rates on lumber shipped from Orleans, Indiana, to Chicago, Grand Rapids and Sturgis, Michigan, and from Paoli, Indiana, to Detroit. The Commission advised that the shipments moved on sixth class rates, but the traffic was interstate, over which the Interstate Commerce Commission alone had jurisdiction.

A. R. 318. Passenger Train Connection at Peru, Between Wabash and L. E. & W.

Complaint by Firestone Tire and Rubber Co. concerning unsatisfactory connections between trains of Wabash Railroad and L. E. & W. at Peru. The matter was taken up with the L. E. & W. Railway, and the latter agreed to hold one of its trains (No. 21) a reasonable time for the arrival of the Wabash. Closed.

A. R. 319. Application for Refund.

Complaint by Melrose Milling Co., asking for assistance to collect claim from the E. & T. H. Railroad, which had refused to protect through rate from Owensville and McGary to Evansville. The Commission advised that it was wholly without authority to act in cases of this nature.

A. R. 320. Irregularity in Placing Cars for Unloading.

Complaint by H. C. Martin & Co., concerning irregularity in placement of cars for unloading. The complainants were advised as to the car service rules in force in Indiana. The complainants further claiming that the charges on anthracite coal from Buffalo were excessive, they were informed that the shipments were interstate, over which the Interstate Commerce Commission has exclusive control.

A. R. 321. Overweight of Carload Shipments.

Complaint by R. W. Vaughn, concerning overweight of carloads of freight shipped over the L. S. & M. S. Railroad. The complainants were advised there was no specific law on the subject, but carriers were not authorized to collect on fictitious weights. The complainants asking for interchange of switching between the L. S. & M. S. Railroad and the B. & O. at Auburn Junction, they were requested to file a formal petition before the Commission to that effect.

A. R. 322. Legal Tender of Freight Charges.

Complaint by J. A. Lee as to action of railroad in demanding certain currency in payment for freight charges. The Commission advised that under act of Congress, standard silver dollars were a legal tender in any amount. Closed.

A. R. 323. Track Elevation in Indianapolis.

Correspondence concerning track elevation in Indianapolis, on Massachusetts avenue, East Washington, New York and Michigan streets.

A. R. 324. Switch Connections at Indianapolis.

Correspondence in regard to lateral and overhead obstructions at plant of Chandler & Taylor Company. The Commission advised that the law governing clearances had no application to this situation. Closed.

A. R. 325. Full Crew Law.

Construction of the full crew law, with respect to the employment of negro porters as brakemen. The following response was made by the Commission:

Wood, Commissioner:

"The Commission has never stated to any person that it would have the colored porters, who are acting as brakemen on passenger trains, removed and white brakemen put in their stead. Neither the Commission nor any State officer would have the authority to do any such thing. There is no distinction under the laws of this State as to whether officers are white or colored persons.

"However, you will note in our construction of the full train crew law that we say that a flagman must be a man of one year's experience in train service. We think it is very seldom, if ever, that colored porters have such experience. You will note also the provisions of section 1 of the act to provide for the safe operation of railroad trains, chapter 272, p. 584, of the Acts of 1907, that every railroad corporation is required to examine its employes on the printed rules of the company at least once in every six months after employment until the service has continued for eighteen months, and annually thereafter. We doubt if the companies who employ colored porters to do the work of brakemen on trains comply with this law. The purpose of this law is to have qualified men to act both as flagmen and as brakemen, and it would certainly be most difficult to take a man who had been acting only as a porter and convert him at once into a brakeman or flagman without instructing him in the rules of the company, and under the act we have last mentioned it would be illegal to do so, unless full instructions had been given as required by the act."

A. R. 326. Car Service on Car Tin Plates.

Complaint by Stratton & Terstegge Company, Louisville, Kentucky, as to car service on car tin plates shipped from Washington, Pa., to New Albany, Ind. The matter being taken up with the Indiana Car Service Bureau, the Commission was advised that the charge had been canceled and the case closed.

A. R. 327. Stopping of Trains at Salem.

Application by Col. Lewis Dennis, Deputy Grand Chancellor Knights of Pythias, to secure stopping of train on Southern Railway to accommodate attendants at district meeting of K. of P. The matter was taken up with the Southern Railway and the latter agreed to stop its train as requested. Closed.

A. R. 328. Storage Rules.

Application by Indiana Car Service Association for adoption by the Commission of certain storage rules. The commission declined to adopt rules upon this subject, but advised that the carriers could make rules thereon. Closed.

A. R. 329. Full Train Crew Law.

Request by B. & O. S. W. Railroad for construction of full crew law, as to number of cars in a train authorized to be operated without a full train crew. The Commission referred the railroad to the statute which provides a maximum of 50 cars in such train, exclusive of caboose and engine. Closed.

A. R. 330. Condition of Cars.

Complaint by United States Cement Company at practice of agent of the Big Four in refusing to note condition of cars and contents on bills of lading. Commission advised it was without authority to act in the premises, but requested further information if the practice continued. Nothing having been heard from the complainant, the matter was closed.

A. R. 331. Rates on Coal over Southern Railway.

Complaint by E. & T. H. Railroad of action of the Southern Railway in charging 65 cents per ton for 3 cars of coal when the published rate was 70 cents. The Commission advised that the only lawful rate chargeable was 70 cents per ton. Closed.

A. R. 332. Car Service Rules.

Application of Inland Steel Company for ruling on proper practice under car service rules. The Commission replied:

"The proper practice in car service matters is that the manager of the Car Service Association first should have charge of collecting the demurrage. If, however, the shipper thinks he ought not to pay for some reason set out in rule 7 of the Commission's rules he will make an affidavit and forward the same to the car service manager. It then becomes the duty of the car service manager either to cancel the claim or to transmit all the papers to the division superintendent or local freight agent of the carrier.

"In the event these officials insist upon the payment of the claim, it is not then, as you say, a question for the Commission, but generally a question for the courts. The Commission has the power to make rules, and we have made certain car service rules, which, when made, have all the force of law. If the carriers and the shipper disagree about the construction or the application of the rule it is generally a question for the courts. However, we have been accustomed here sometimes to take up these matters informally and see whether or not an agreement could not be brought about between the shipper and the carrier, and if under the suggestions of this letter you desire to do this and will state in response the exact facts of the transaction about which you differ with the carrier, we will see what can be done. Do not understand, however, that the Commission attempts to settle all these cases between carrier and shipper. We have no such jurisdiction, and they are so numerous that if we were to attempt it we would have no time to perform our other important duties."

A. R. 333. Car Service Rules.

Inquiry from T., St. L. & W. Railroad as to whether the Commission had promulgated a car service rule on payment of charges in certain cases before shipping instructions are accepted and bill of lading signed. Answered in the negative. Closed.

A. R. 334. Switch Construction.

Inquiry by Nicholson Tile Company of Anderson, as to decision of Commission on duty of railroads to construct side tracks. Replied to, that the Commission could compel such construction and connection with tracks of industries abutting upon the right-of-way. Closed.

A. R. 335. Excessive Rates on Coal.

Complaint by Indiana Southern Coal Company of rates from Southern Indiana territory to the gas belt. The Commission replied as follows:

"With reference to the general complaint in your letter about the general conditions of moving coal from the southern Indiana territory to

the gas belt, you are perhaps advised that the Commission has been doing everything in its power under the law to bring about better results. We have made rules for the distribution of cars of the Southern Indiana Railroad Company, but the matter of these rules is still in litigation between us and that company. We have taken such part as we could in inducing the E. & T. H. road to take off its embargo against the Big Four, and our general information here is that the movement of coal into the gas belt on account of the shutting down of some factories has been so much less than last year that there has been little difficulty either in getting cars or in getting it moved in reasonable time. This season is nearly passed now, and the outlook for business hereafter of this kind is very much better, because by next year the Big Four will have a double track between here and Terre Haute and a large part of the double track of the Vandalia will be in use, and the Indianapolis Southern will be moving coal from the same territory, its track being then in condition to take care of all that may be offered, and, altogether, we can see no reason why there will be any delay or difficulty about these shipments in the future."

A. R. 336. Car Service Rules.

Inquiry from East Chicago and Indiana Harbor Manufacturers' Association whether it was necessary to apply to the legislature for change in car service rules. The complainant was advised by the Commission that the latter had power to change these rules so far as they applied in Indiana, and invited the filing of a formal application therefor, setting out the proposed changes.

A. R. 337. Free Delivery by Express Companies.

Complaint by Brannum-Keener Lumber Company of non-delivery of express matter by Express Companies, to points as far as Belt Railroad and East Washington street, Indianapolis. The Commission advised that in its opinion, free delivery within the corporate limits of Indianapolis should be made, but that the matter was then in litigation in the state courts. Closed.

A. R. 338. Claims for Shortage.

Complaint by C. E. Strout, of Anderson, concerning overcharge by the Big Four on coal. The Commission advised that it had no authority to compel a refund, and suggested a resort to the courts for redress.

A. R. 339. Affidavit Car Service Rule.

Request by Indiana Car Service Association for construction of Commission's Rule No. 7. To this communication the Commission replied as follows:

"Commission's rule No. 7 clearly requires the shipper to file his affidavit within ten days after the car service claim has been presented to him.

If he does not file within this time he cannot afterward make an affidavit to transfer a decision of the matter from the car service manager to the railroad official. It seems, however, also clear that he would still have the right to insist with the manager that he should not pay the claim because of weather conditions, or because cars were bunched, or because of any other condition about which he might make affidavit. In other words, the ten days' limitation applies only to the right of making an affidavit and transferring the decision from the car service manager to the railroad company. It does not prevent the shipper from making his defense with the car service manager or in court if a suit should be brought."

A. R. 340. Rates on Cord Wood.

Complaint by Philip Klein, of Evansville, that no satisfactory rate on cord wood from New Harmony to Evansville would be given by the Illinois Central Railroad. The matter being considered with the railroad, the latter agreed to a rate of $3\frac{1}{2}$ cents per 100 pounds, which was satisfactory to the complainant and the matter was closed.

A. R. 341. Car Service Rules.

Inquiry from Indiana Car Service Association, whether February 12th (Lincoln's birthday) should be included within legal holidays on which car service charges are not assessed. The Commission advised that under the Indiana statutes this date was embraced within the car service rule as to free time. Closed.

A. R. 342. Form of Notice of Car Arrivals.

Inquiry from J. C. Keller as to whether railroads can lawfully compel shippers and receivers of freight to sign articles agreeing to accept certain form of notification of arrival of cars. The Commission advised that, under Car Service Rule 1 shippers and receivers of freight could not be compelled to sign agreements for other than legal notice of arrival.

A. R. 343. Bunching of Cars.

Inquiry from manager of Car Service Association of Chicago, as to construction of Indiana Car Service rules promulgated by the Commission, and territory to which they applied. The Commission advised:

"It is our province to make rules which, when made as they are made, by the authority of the legislature, have the force and effect of the law. It is the province and the duty of the courts to construe these rules. If you have a claim of \$1,421 against the Interstate Iron and Steel Company arising, of course, out of a great many transactions, the Indiana Railroad Commission would not attempt to settle the matters of fact and the

matters of law involved in these claims. We have steadfastly declined to do this. The courts are open to you for that purpose, and we suggest you avail yourself of the remedy afforded you by the courts and do not expect us to take up individual claims to settle them. If you desire to appear before us with reference to our rules or to any modification of them or to any construction we have made of them, we will be glad to hear you. But after you have finished what you wish to say we will advise you that your remedy in matters of this sort—contesting matters of fact and law—is in the courts and not before this Commission.”

A. R. 344. Placing of Cars.

Inquiry by Ohio Falls Iron Company of New Albany as to whether Louisville or Indiana Car Service Rules applied on cars arriving at New Albany from Kentucky, and when free times commenced on a car arriving at 10 o'clock p. m. The Commission advised that the Indiana Car Service rules were applicable on the cars in question, and that free time commenced at 7 o'clock a. m. after receipt of notice of arrival and placement of car.

A. R. 345. Rates on Gravel.

Complaint by Mount Vernon Construction Company that only rate on gravel from New Harmony to Stewartville, Griffin and Poseyville was 35 cents per ton. After conference with the Illinois Central Railway, the Commission secured the establishment of a rate of 30 cents per ton and the matter was closed.

A. R. 346. Overcharge on Scrap Iron.

Complaint from George W. Davis concerning overcharge on scrap iron shipped over the Vandalia Railroad on sixth class basis: no commodity rate between the points in question being in force. The Commission advised that the Railroad could only move traffic on rates filed with it, and the Commission had no power to alter the statute.

A. R. 347. Accident Reports.

Correspondence with C., I. & L. regarding filing of accident reports. Railroad agrees to furnish reports as requested by the Commission. Closed.

A. R. 348. Passenger Rate on Ft. Wayne and Wabash Valley Traction Line.

Complaint by Charles W. Clark of overcharge of passenger fare. Matter referred to prosecuting attorney with request to prosecute the company for violation of the law. Complainant was so advised. Closed.

A. R. 349. Car Service at Connersville.

Complaint by Roots & Company of delays in delivery of cars. The complainants were advised that the Commission had no authority in the premises as the matter related to interstate commerce; and further, that the question of physical connection between the Big Four and the C., H. & D. at Connersville was about to be litigated, and the Commission's order in the matter enforced.

A. R. 350. Electric Wires and Cables.

Inquiry from A. H. Kennedy, of Rockport, Indiana, as to Indiana law on the distance electric wires and cables should be elevated above railroad tracks. The Commission advised that the statutory elevation was 25 feet. Closed.

A. R. 351. Storage Charges.

Complaint by W. D. Miller, of Indianapolis, of practice of the Big Four Railroad in stating to consignees there is no freight for them, when the freight has been placed by the railroad in a storage warehouse. The Commission took the matter up with the Big Four, and its representative advised that the company sends postal card notices on arrival of cars, and that he would discuss the matter with the complainant if the latter would call. Closed.

A. R. 352. Short Weight of Coal.

Complaint by J. W. Ross of shortage in weight of coal shipped over C., I. & L. Railroad from Shirley Hill coal mine. The Commission advised that under the law it had no jurisdiction in the matter.

A. R. 353. Charges for Right-of-Way.

Inquiry by Kitschman Bros., of Muncie, as to whether railroads must, under the law, charge shippers for the use of a portion of their right-of-way. The Commission advised there was no such law. Closed.

A. R. 354. Overcharge on Lumber.

Complaint by Henry Mabey Co., of Edinburg, of overcharge on lumber. The Commission advised that as the matter related to interstate commerce, it has no jurisdiction and suggested that the complainant lay the facts before the Interstate Commerce Commission.

A. R. 355. Passenger Rates on Wabash and C. & E. I.

Complaint by David Marks of overcharge in passenger rate between Logansport and Clinton, on the Wabash and C. & E. I. railroads. The Commission advised that the charge was probably correct, as the travel was interstate and the Indiana two-cent fare law did not apply. Closed.

A. R. 356. Passenger Rates.

Complaint by Milton Garrigus regarding passenger fares charged on interstate travel where both states had a two-cent fare law. The Commission advised that neither state had jurisdiction, as the traffic was interstate.

A. R. 357. Lateral Structures.

Inquiry from Fairbanks, Morse & Co. as to lateral and overhead clearances. The Commission referred the correspondent to the statute fixing 18 inches from car for lateral and 21 feet above rail for overhead clearances; wires to be 25 feet above the rails. Closed.

A. R. 358. Standard Size Cabooses.

Inquiry as to standard size of cabooses. The Commission replied that no size was designated by law or adopted by the Commission. Closed.

A. R. 359. Common Carriers.

Communication from Attorney-General Bingham, enclosing letter from Indiana Milling Company, concerning shipments originating in Indiana and outside thereof. The Commission referred the correspondent to the shippers' bill, and advised that the penalties thereof applied only to intrastate traffic. Closed.

A. R. 360. Discrimination in Rates.

Complaint of Swinehard Hardware Company as to discrimination in rates on a car of coal shipped from Clinton, to Chrisman, Illinois. The Commission advised the matter was interstate, over which the Commission had no control.

A. R. 361. Violation of Transportation Law.

Inquiry from Indianapolis Southern Railway as to whether free transportation could be given by the railroad to the mother of a party injured by the railroad, to enable her to visit the party so

injured. The Commission advised that the pass could lawfully be issued, provided appropriate terms were inserted therein. Closed.

A. R. 362. Moving Side Track.

Correspondence with McConnell and Kennedy, of Pine Village, as to the law on the movement of side tracks. The Commission advised the correspondents concerning the law governing the subject. Closed.

A. R. 363. Excessive Rates on Carload Lots of Corn Cobs.

Request by the Southern Indiana Railway for authority to grant a certain rate in connection with the E. & T. H. Railroad to the Indiana Milling Company on cars of corn cobs. The shipments being interstate, the Commission advised that it was without authority to act and referred the railroad to the Interstate Commerce Commission.

A. R. 364. Shippers' Bill.

Inquiry from Indiana Manufacturers' and Shippers' Association as to accomplishments under the shippers' bill, to which the Commission responded:

"Section 2. Rolling Stock.—No complaints have been filed under this section, excepting ordinary complaints concerning cars for the shipment of grain, and we are not able now to state that conditions have been different since the enactment of this law than what they were before this law was enacted. However, complaints have been less numerous this winter than they were last winter, but presumably that is accounted for by the financial condition, which has resulted in all railroads having an ample supply of available equipment during the period when there is usually the greatest congestion in grain movement.

"Section 3. Forward Movement of Traffic.—The Commission has nothing to do with the enforcement of the provisions of this section, which provides for the forward movement of traffic, and we have had but two or three complaints on that account, and whether or not any of the parties entitled to bring actions under this section of the statute have done so we are unable to say. We are not able to state from information now at hand whether this statute has resulted in a more expeditious movement of traffic or not.

"Section 4. Switching at Junction Points.—Under this section of the statute the Commission has procured the interchange of traffic between the railroads centering at Huntington, Indiana, and by virtue of the provisions of this section, along with the provisions in the general act creating the Commission, an order was entered recently requiring the railroads centering at Marion, Indiana, to interchange carload shipments with the C., C. & L. Railway.

"Section 5. Car Supply.—There have been no specific complaints under this section other than as mentioned with reference to section 2. We

think we can safely state that there has been much less complaint during the last year concerning the distribution of car equipment than there was formerly, but to cite particular instances we are unable to do so.

"Section 6. Car Record.—We have about completed the inspection of steam lines in this State and are able to report that all of the roads inspected, except the Baltimore & Ohio, had complied with the law requiring the carriers to furnish a car record upon which demands for cars could be recorded, and as we are informed the carriers are generally using this record for the purposes for which it is intended, and are also in some instances using it for their interstate shipments. The Baltimore & Ohio supplied this record as soon as the omission was called to their attention. Just what benefit this record has been to the shippers of the State we are unable now to tell. We have no knowledge of any shipper having undertaken to enforce the penalties provided in section 8 for failure to deliver cars as ordered.

"Section 9. Coal Car Distribution.—Pursuant to section 9, the Commission instituted an inquiry and entered an order with reference to the distribution of coal cars by the Southern Indiana Railway Company. The company refused to comply with the order of the Commission and the subject is now in litigation in the State courts.

"Section 13. Rates on Coal.—Acting under the provisions of this section, the Commission has in a great many instances procured the establishment of coal rates to points in this State.

"Section 15. Receiver.—No such conditions have obtained as would authorize the Commission to apply for the appointment of a receiver under this section of the statute.

"This is a brief history of the matters that have been before the Commission under this act.

"We think it may be safely said with reference to this act, as with reference to the general law creating the Commission, that its silent effect has been greater and of more benefit than that which appears upon the surface by complaints before the Commission. Its restraining and commanding influence, we believe, has been observed to a very large extent by the carriers. You understand, of course, that the Commission receives no report or complaint where the action of the carrier has been prompt and satisfactory. It is only in the few instances where the carriers have failed to perform their duty that complaints come to the Commission. The Commission is a registrar of failures by the carriers and not of the carriers' successes, and for this reason the total benefits accruing under this act are not a matter of record with the Commission. The members of your association, no doubt, would have a better opportunity to determine whether or not the general and broad purposes of this act have been accomplished than the Commission would have."

A. R. 365. Telephone Wires Over Railways.

Inquiry by Northern Indiana Telephone Company as to requirements with reference to telephone wires crossing railway right-of-way at highway crossings; to which the Commission responded, referring to the law governing the subject. Closed.

A. R. 366. Through Rate on Carloads of Cattle.

Complaint by W. E. Barr, of Indianapolis, that a through rate on cattle was denied him by C. & I. Railroad. The matter was taken up by correspondence, and it appearing that no through rate was published, the matter was closed.

A. R. 367. Loading Cars.

Complaint by Indiana Hay Company, of Terre Haute, concerning charge for additional freight which was not loaded. The matter was taken up by correspondence. Closed.

A. R. 368. Alarms at Street Crossings.

Inquiry from town clerk of Bunker Hill as to power of Board of trustees to compel the Indiana Union Traction Company to install highway crossing alarms. The Commission advised that in its opinion the town board possessed no such power. Closed.

A. R. 369. Refund by P., C., C. & St. L. Railway.

Request by Pan Handle for authority to make a refund, the occasion for which was necessitated by an error in the traffic department of the railroad. The Commission responded by sending a circular prepared by it upon the subject of refunds.

A. R. 370. Rates on Coal.

Inquiry from U. S. Specialty Co. for rates on coal from southern Indiana and central Indiana districts. The Commission responded, giving rates.

A. R. 371. Refunds.

Requests by C., I. & L. Railway for authority to make a refund. The Commission responded that it had no authority to empower railroads to make refunds.

A. R. 372. Rates on Grain.

Request from Cottrell Brothers, of Atherton, to Commission to readjust a rate on cars of wheat from Atherton to St. Louis. The Commission responded that, as the shipment was an interstate one, the Interstate Commerce Commission had exclusive jurisdiction thereof.

A. R. 373. Refunding Tickets.

Request by G. M. Patterson for rules on refunding tickets. The Commission responded that the Commission had no rules on the subject and the same was governed entirely by statute. Closed.

A. R. 374. Lateral Clearances.

Inquiry by R. J. Hammond as to clearances required between a steam road side track and adjacent buildings. The Commission responded with the information requested. Closed.

A. R. 375. Coal Rates.

On April 20, 1908, the Bloomington Coal Company, of Bloomington, Indiana, informally brought before the Commission its request for the reduction of the rate on coal from mines in the Linton field when brought by the Indianapolis Southern Railroad to Bloomington and consigned for delivery on Monon rails in that city. The rate charged was a joint rate of 75 cents, and the petitioner wished the rate reduced to fifty cents per ton, the same as the local rates to Bloomington via the Monon and Indianapolis Southern Railroads, and a switching rate established to cover the interchange and delivery by the Monon railway to industries located on the latter's rails. An investigation was made by the Commission, through its traffic department, and the matter submitted by conference to the traffic officials of the carriers. The Monon Railway Company declined to accept a switching charge for its movement of the coal, and the petitioner was advised that the Commission was without power to proceed further unless a formal petition was filed, and its lawful jurisdiction invoked.

A. R. 376. Train Service at Carlos City.

The citizens of Carlos City, Indiana, and vicinity, filed a petition with the Commission asking that such steps be taken under the laws of Indiana as would cause the respondent to give better passenger train service going west on said road and asking that said respondent be required to stop its morning west-bound passenger train. This case was heard by the Chairman of the Commission at Carlos City, Indiana, June 4, 1908, the petitioner being represented by a large number of citizens and the respondent by M. A. Neville, superintendent of the Peoria Division of the Cleveland, Cincinnati, Chicago & St. Louis Railway Company. At this hearing Mr. Neville assured the citizens of Carlos City that it was his desire to give them the best train service possible. After returning to Indianapolis and before making a formal order in the matter the Commission was notified by Mr. Neville that the evening train going west from Carlos City would stop on flag, but that the new time table did not arrange for stopping the morning train. As this did not afford much relief to the petitioners the Commission asked Mr.

H. F. Houghton, general superintendent of the C., C., C. & St. L. R. R., to come to its office, and the matter was placed before him. Mr. Houghton agreed to look carefully into the matter and in a short time advised the Commission that the morning train would stop at Carlos City to receive and discharge passengers. The demands of the petitioners being thus satisfied no further steps were deemed necessary.

A. R. 377. Lights at Street Crossings in Clay City.

Report of investigation by the Commission as to the necessity for lights at streets in Clay City crossed by the E. & T. H. Railroad, as required by the town council. The Commission found that the railroad should not be required to place such lights.

A. R. 378. Sale of Twenty-Ride Coupon Tickets between Indianapolis and Broad Ripple via Indiana Union Traction Line.

On June 4, 1908, Robert H. Fesler, of Malott Park, Indiana, and on June 5, 1908, Walter E. Evans, of Indianapolis, Indiana, complained to the Commission that the Indiana Union Traction line between Indianapolis and Broad Ripple had restricted the sale of twenty-ride coupon ticket books between Indianapolis and Broad Ripple, and residents of Broad Ripple during certain months of the year. This matter was referred to Chairman Hunt, who investigated the same, and the Indiana Union Traction Company, on June 29, 1908, put into effect a twenty-ride ticket for the holder thereof, selling at the rate of 15 cents round ticket, and placed the same on sale at Indianapolis and Broad Ripple. The complaining parties in this case announced their satisfaction with this arrangement and the matter was closed.

A. R. 379. Depot Facilities at Hillsdale.

E. E. Douglas et al., of the town of Hillsdale, Indiana, and vicinity, filed a petition with the Commission in June, 1908, asking that the Chicago & Eastern Illinois and the Cincinnati, Hamilton & Dayton Railroad Companies be required to provide and maintain suitable depot accommodations, including waiting rooms, separate closets and such other facilities as the Commission might deem necessary and proper. In investigating this matter it was found that some four or five years ago the depot at Hillsdale had been destroyed by fire and that a box car had been doing service as a depot since that time. When the petition was filed it was referred to the

Chairman of the Commission, who took the matter up with Mr. J. M. Scott, division superintendent of the C., H. & D. R. R., and Mr. W. J. Jackson, of Chicago, general manager of the C. & E. I. R. R. A letter was written to the railroad officials named herein advising them of the petition and of the facts concerning the same then in possession of the Commission. The officials of both railroads agreed that the facilities at Hillsdale were not as they should be. A conference was held between Mr. W. J. Jackson, of the C. & E. I. R. R., and the Chairman of the Commission, in the city of Chicago, and Mr. Jackson agreed to expedite the building of the Hillsdale station as much as it was possible to do so. A conference was held in the office of the Commission with Mr. J. M. Scott, of the C., H. & D. R. R., who likewise agreed to lend his efforts to expedite the matter and finally an agreement was reached with all parties interested that a station should be constructed before the beginning of winter. During the month of October the Commission was advised by one of the citizens of Hillsdale that no material had been delivered on the ground and, so far as the citizens of Hillsdale were advised, that no steps had been taken looking to the construction of a depot at that place. Immediately on receipt of this communication a letter was addressed to Mr. Jackson, of the C. & E. I. R. R., calling attention to the fact that no steps had been taken, so far as the Commission was able to ascertain, looking toward the construction of a depot at that place. Under date of November 11, Mr. Jackson replied to this communication as follows:

"I have handled this subject with the C., H. & D., since my conference with you in Chicago, and I hope to be able to send you in the course of a short time the plans for a station which we propose to build at that point."

On receipt of this letter the Commission called Mr. J. M. Scott by telephone and was advised by him that plans had been completed, but that there was some difference of opinion between the officials of the two railroads as to certain work as well as certain track facilities at Hillsdale, but that an effort was being made to get together and that he had no doubt that a depot would be built by the first of the year. There seems to be no doubt as to the necessity of additional depot facilities at this place and upon that proposition the railroad officials have agreed. It is only a matter to be adjusted between themselves as to just how it should be done and the Commission has every reason to believe that this depot will be built within a short time.

A. R. 380. Passenger Train Service at Raub.

Dale Benson and other citizens of Raub, Indiana, and vicinity, filed a petition with the Commission alleging that the passenger train service at that station was insufficient to meet the needs of the people and requesting that the Commission take the matter up and require additional service. The matter was assigned to the Chairman of the Commission and was heard at the town of Raub on the 29th day of July, 1908. The evidence was substantially as follows:

Raub is a town of about 125 people, located on the Chicago division of the C., C., C. & St. L. R. R. A large amount of grain is shipped from this station, but the passenger business runs only about to fifty-four and seventy dollars per month. An agent is maintained here, but the passenger service consists of one train each way a day—No. 2, eastbound, 7:04 in the morning; No. 9, westbound, at 10:18 in the forenoon. The objection on the part of the railroad company to stop at Raub is that the time consumed in stopping would make them unable to make their mail and through passenger connections at Chicago and Cincinnati, and that the business at the station is so small that they can not afford the additional expense of stopping all their trains.

The Commission has given careful consideration to the evidence in this case, and has arranged with Mr. Houghton, the general superintendent of the C., C., C. & St. L. R. R., to give to the town of Raub additional train service as follows:

No. 16, eastbound, which arrives at that station at 11:30 a. m., is to stop on signal to take on passengers for Indianapolis, and No. 34, eastbound, which arrives from Chicago at 11:30 p. m., is to stop at Raub to receive and discharge passengers from and to all other points where such train stops. No. 37, westbound, which arrives at Raub at 4 a. m., is to stop and receive all westbound passengers for points between Raub and Chicago and all points west. This gives to the people of Raub and vicinity the benefit of three trains that are not now stopping at Raub. The people of that vicinity have considerable business in Chicago and under the present arrangement they can get to Chicago, or to points between Raub and Chicago, at 4 o'clock in the morning and spend the entire day, returning at 11:30 at night, or they can leave for Chicago at 10:18 a. m., arriving at Chicago at 1:30 p. m., spend the afternoon there and return to Raub the same evening.

A. R. 381. Depot and Train Service at Mt. Comfort.

Complaint by Henry Right et al. as to the depot and train accommodations at Mt. Comfort, on the P. & E. division of the Big Four. The matter was taken up with the general superintendent of the Big Four, who agreed to give better train service as set out in the following report by Commissioner Wood:

In this matter I beg leave to report to the Commission that I have taken the same up by correspondence and by conferences with Mr. H. F. Houghton, general superintendent of the railroad company, with the final result that Mr. Houghton has agreed to have morning passenger train, going west, stop at Mt. Comfort to take on and discharge passengers, that this arrangement will be satisfactory to the people of Mt. Comfort, and is, in my opinion, the best that could be done for them. This matter is, therefore, closed.

A. R. 382. Passenger and Express Service at Yeomans.

A number of citizens of Yeoman (Lennox), Indiana, complained of poor train service on the Chicago, Indianapolis & Louisville Railway. The matter was taken up with Mr. Taylor, the general manager of the Chicago, Indianapolis & Louisville Railway Company, who visited Indianapolis for the purpose of conferring with the Commission about this matter. Mr. Taylor laid before the Commission facts that seemed to show that his road was giving to the people at the station of Yeoman the best possible service under conditions existing at that time and nothing further was done in the matter.

A. R. 383. Watchman for Street Crossing at Carbon.

Correspondence concerning watchman at street crossings in Carbon. The Commission advised that it had authority to require watchman after proper action by the town board. The railroad involved subsequently installed warning signals and the matter was closed.

A. R. 384. Station at Soldiers' Home.

The Hon. William S. Haggard, president of board of trustees of the Indiana State Soldiers' Home, located near the city of Lafayette, in Tippecanoe County, Indiana, filed a petition with the Commission setting out the facts that the Soldiers' Home had enrolled more than 1,200; that the average number present during the last year was about 800, which number is constantly increasing; that during the six years last past the interurban line of the Fort

Wayne & Wabash Valley Traction Company had operated a traction railroad from the city of Lafayette to the town of Battle Ground, which road passed the Indiana Soldiers' Home at the foot of a hill near the Wabash river; that the patronage of said Soldiers' Home was greater than any other station along the line of said interurban railway; that large numbers of members of said Soldiers' Home patronize said road daily and that very frequently cars were crowded to the limit; that the company operating said interurban railway had established a station and regular stop at said Soldiers' Home, but had failed to erect any shelter shed, house or building of any kind for the protection of said members of the said Soldiers' Home from the rain, snow and cold. Because of this condition and because the officials of the Soldiers' Home were unable to secure the necessary accommodations the Railroad Commission of Indiana was requested to take such action as would cause such a building to be erected as the facts would warrant. This case was at once taken up by the Chairman of the Commission with Mr. C. D. Emmons, general manager of the Fort Wayne & Wabash Valley Traction Company, and after a conference and much correspondence said Company agreed to build a station at the Soldiers' Home, and filed a blue print showing the plan of said station, together with proper and necessary shelter sheds. This blue print was submitted to the officials and trustees of the Soldiers' Home and was approved by them and Mr. C. D. Emmons was informed that the proposed structure would be satisfactory. At the time of writing this report, the Commission is advised that the traction company has complied with its agreement in so far as the erection of the main station is concerned, but that the sheds have not yet been constructed. This matter has again been taken up with the traction company and the Commission has no doubt that said company will comply with its promise.

A. R. 385. Insufficient Free Time.

Request by Brafford-Files Grain Company for construction of car service rules, where freight is delivered on Saturday and the carrier observes a half holiday. The railroads involved agree to keep a billing clerk on duty during Saturdays until 2 or 3 p. m. The complainants were so advised, and the matter was closed.

A. R. 386. Construction of Sixteen-Hour Law.

Request for construction of the sixteen-hour law. The matter being considered, the following letter was written to the applicant:

"You have addressed a communication to the Railroad Commission of Indiana, asking whether the 'sixteen-hour law,' enacted at the last session of the legislature, applies to electric lines. The Commission has given the matter consideration and directs me to write you as follows:

"The act of 1907, above referred to, provides as follows: 'It shall be unlawful for any superintendent, train dispatcher, yard master, foreman, or other railway official, to permit, exact, demand or require any engineer, fireman, conductor, brakeman, switchman, telegraph operator or other employe engaged in the movement of passenger or freight *trains*, or in switching service, in yards or railway stations, to remain on duty more than sixteen consecutive hours,' etc.

"The classes of officials and employes set forth in the act include both those connected with steam and electric lines; though some of these (e. g., engineer and fireman) pertain only to the former. However, there is nothing in the language of the statute which necessarily antagonizes the idea that it was intended to apply alike to all roads.

"That such was its object is indicated by its title, which reads: 'An act to *promote the safety of employes and travelers upon railroads in the State of Indiana*, by limiting the hours of service of employes thereon,' etc. While the legislature might, perhaps, constitutionally pass an act to protect travelers and employes on *steam* lines only, yet it is scarcely probable that it would deem it proper or necessary to exclude from the safeguards provided for steam railway passengers and employes those who took passage upon or were employed by electric lines.

"It might be added that the act of 1907 is based upon the act of 1903 (Acts 1903, p. 113), whose title reads thus: 'An act for the *better protection of the traveling public*, limiting the hours of service of trainmen on the railways of this State,' etc. An act for the better protection of the traveling public would probably not stop short of protecting passengers and trainmen on both steam and electric roads; and the act of 1907 is not more limited in its scope than that of 1903.

"At the legislative session of 1907 many laws were passed relating to railways. A comparison thereof reveals a purpose to extend state supervision and regulation to interurbans, as well as to steam roads. Thus the Railroad Commission act, sec. 21, p. 487, enlarges the scope of that statute to include interurbans within its general provisions, as does also the title, thus changing the language of the law as originally enacted. In an act relating to powers of town trustees over railroads, the legislature expressly declared that it applied to interurbans as well as steam roads (Acts 1907, p. 124); by a statute concerning bribery of railroad employes, its terms are applied to all 'common carriers' (Acts 1907, p. 192), and the same phraseology is used in the enactments governing the transportation of fish (Acts 1907, p. 87), the sale of liquors on trains (Acts 1907, p. 31), and the carriage of free baggage (Acts 1907, p. 195). The latter statute has recently been construed by the Commission to apply to interurbans.

"On the other hand, wherever the General Assembly of 1907 intended to restrict railway legislation to steam lines it has done so *expressly*, as in the case of laws concerning the establishment of block systems (Acts 1907, p. 353, and see title of the act), the adoption of rules for employes (Acts 1907, p. 584, and see title of the act), the use of safety appliances (Acts

1907, p. 187, and section o, expressly *including* interurbans as to certain features), overhead and lateral clearances (Acts 1907, p. 189, sections 11 and 12), and the shipment of freight (Acts 1907, p. 343, section 1 of 'shippers' bill, excluding interurbans by indirect reference), or it has excluded electric lines by *implication*, as in the instance of the 'full crew law' (Acts 1907, p. 18), and the two-cent fare law (Acts 1907, p. 62), as interpreted by the Attorney-General.

"The fact that the word 'train' is employed in the 'sixteen-hour law' does not necessarily indicate that it would not apply to a train consisting of a single interurban car. In one of the statutes, approved on the same day with the act in question, the title clearly indicates the legislature used the word 'train' as including a 'car,' the language being, 'An act to promote the safety of employes and travelers upon railroads, by compelling common carriers by *railroads* and *interurban railroads* in Indiana to provide certain safety appliances for locomotives, *cars and trains*, and to operate *trains* with reference thereto,' etc. (Acts 1907, p. 186.)

"For the foregoing reasons the Commission is of the opinion that the sixteen-hour law of 1907 applies to interurban railways within this State."

A. R. 387. Abandonment of Station at Rockford, Indiana, by the Pittsburgh, Cincinnati, Chicago & St. Louis Railway Company.

On the 31st of August, 1908, D. A. Lucas and other citizens of the town of Rockford, Jackson County, Indiana, complained to the Commission that the Pittsburgh, Cincinnati, Chicago & St. Louis Railway Company had on the 6th day of July, 1908, abandoned its station at Rockford and requested the Commission to order a continuance of said station. The matter was referred to Chairman Hunt, who took the same up with the railroad company, which contended that the revenue from that station did not justify a salary acceptable to any agent at that point, and as over one-half of the revenue was derived from an industry located at Rockford, whose offices are at Seymour, it did not feel justified in continuing a station at Rockford, which is about two miles from Seymour, it establishing a prepaid station for freight and regular stop for local passenger trains. The matter is being held under advisement by the Commission and no order as yet issued.

A. R. 388. Excess Baggage on Interurbans.

The Commission received numerous letters complaining of excess baggage charges by interurbans. The matters being considered, the following opinion was sent to those making complaint:

"Your letter of August 6th, inquiring whether the excess baggage act of 1907, chapter 123, p. 196, of the Acts of 1907, applies to interurban as well as steam lines, was received and has been considered by the Commission.

"I am directed to reply that it is clear that such act does apply to interurban railroads. The prescription of the first section defining the application of the statute is: 'That each common carrier in this State which shall engage in the carriage of passengers by railroad between points in this State shall receive and transport,' etc.

"The words used here are very broad and clear and contain no possible suggestion that the act was not intended to refer to traction lines. It is not said 'that any railroad or any steam railroad,' but it is said that each common carrier, whose business it is to carry passengers from one point to another in this State, shall do what is afterward required by the act, and we cannot conceive any construction, as far as these words are concerned, which would limit the application of the act to steam railroads.

"We have noted the proviso of the act at the end of the first section which is in these words: 'Provided that such carrier shall be required to carry baggage only on trains equipped with the baggage cars.'

"We think that this proviso was intended only for the purpose of exempting from the act such trains as carry mail or express or freight only, for the convenience of the public adding a passenger coach and carrying passengers. In other words, this proviso was not intended to define the application of the act or to limit the application to carriers whose trains were generally equipped with baggage cars, but its sole purpose was to except certain trains which in some cases, for the convenience of the people, carried passengers without baggage. By the terms of the act in their ordinary meaning, it must be taken to include all common carriers by railroads in this State. But inasmuch as penalties are prescribed, the proviso in the first section expressly exempts from the operation of the act such trains as are not equipped with baggage cars or with facilities to carry baggage.

"For the reasons given we answer your question in the affirmative and recommend that your company, if it has not done so, shall hereafter be governed in the matter of excess baggage by this statute."

A. R. 389. Free Delivery Service by American Express Company at Fowler, Indiana.

E. L. McKnight, of Fowler, Indiana, on August 15, 1908, informed the Commission that the American Express Company had discontinued its free delivery of express matter within the business portion of that city and requested that Commission to require such free delivery service to be performed. The matter was taken up by the Chairman of the Commission, with the officers of the Indiana division of the American Express Company, and on October 19, 1908, the American Express Company reinstated free delivery of express matter at Fowler, thereby closing the matter.

A. R. 390. Excessive Rates on Lumber.

Complaint by W. H. Bower against Louisville, Henderson & St. Louis Railway et al., as to excessive joint rate on lumber. The matter was heard at Evansville by the Commission, and is still pending.

A. R. 391. Restoration of Station at Ging.

Complaint by citizens of Ging for restoration of station of the Pan Handle. The matter was taken up by correspondence, and the complainants advised they would not request a formal hearing at this time. The matter was continued indefinitely.

A. R. 392. Station Facilities at New Palestine.

Petition by citizens of New Palestine for better station facilities furnished by the Indianapolis and Cincinnati Traction Company. The matter was taken up by the Commission with the railroad, and the latter replied that the accommodations would be improved as soon as the financial condition of the company permitted. The matter is still pending, awaiting application of petitioners for a formal hearing.

A. R. 393. Car Service at Raccoon.

Complaint by F. L. Grider of refusal by C., H. & D. Railroad to stop its refrigerator car at Raccoon to take on produce. After personal conference with the representative of the C., H. & D., the service was restored and the matter was closed.

A. R. 394. Train Service at Clark's Hill and Colfax.

Complaint by W. W. Linzy, of Indianapolis, of train service at Clark's Hill and Colfax. Upon investigation the Commission ascertained that probably no better service than now furnished could be required. Complainant was so notified and the matter was closed.

A. R. 395. Switching Service at Muncie.

Complaint by Warner Gear Co., of Muncie, that they are denied switching of cars from other roads to their plant by Big Four. Matter taken up with Big Four and the latter agreed to give the service desired. Complainant was so notified and the matter was closed.

A. R. 396. Train Service at Radnor.

Petition for better train service at Radnor. The matter being taken up with the C., I. & L. Railroad, the latter advised that no better service could be definitely promised. The petitioner was so notified and there the matter rests.

A. R. 397. Freight Movements per Day, Required by Statute.

Complaint by United Gas and Electric Company of New Albany that Southern Railway unduly delays delivery of freight cars at New Albany terminal. The Commission advised as to the free time allowed, and construed the act of 1907, p. 435, as follows:

"Under the construction at present placed by the Commission upon section 3 of the shippers' bill (Acts 1907, p. 435), the carrier does not have 24 hours at New Albany for delivery, where coal has been shipped to you from Oakland City. The statute reads thus: 'All carriers subject to the provisions of this act are required, when any carload freight has been properly loaded and proper shipping instructions have been delivered, to move the same forward to destination, if on its line, or to the point of junction with the connecting carrier named in the shipping directions, not less than an average of fifty miles every 24 hours, Sundays and legal holidays excepted: Provided, That twenty-four hours shall be allowed for movements *through* the terminals at point of origin and for passing through any transfer or terminal en route.'

"It will be observed that no mention is made in the statute of any period for movement of a car at point of destination. The only terminals indicated are those which the car is intended to *pass through*. This is the express language of the act, and seems to imply that movements at final destination are not included, since there is no *passing through* such terminals.

"Moreover, the terminals specifically mentioned are those at point of origin and those *en route*; i. e., 'on the way.' The terminal at destination clearly does not fall within the first; and it is equally excluded by the second. See *McLean v. U. S. 17 Ct. Cl., 83, 90.*

"Accordingly, following a well-known rule of statutory construction, it seems reasonable to construe par. 3 as excluding those classes of terminals not embraced within the ones particularly mentioned. This reading of the statute the Commission is inclined to adopt, as at present advised. The question, however, has never been formally brought before it."

A. R. 398. Passenger Service at Tell City.

Complaint by citizens of Tell City, as to passenger service of the Southern Railroad. After investigation, the Commission made a report thereon, and after conference with the railroad the latter agreed to make a new train schedule within thirty days. The complainant was so notified. The Commissioner having this matter in charge reported as follows:

"With reference to the complaint of citizens of Tell City, Indiana, as to train service of the Southern Railroad to Tell City and Cannelton, I beg leave to report:

"On the 27th day of September I had before me at Evansville C. C. Coffee, superintendent of these lines. I explained to Mr. Coffee that a great many complaints from reliable persons were being made to the Commission, and I said to him that the frequent delays of from one to four or five hours in passenger service for the short distance between Lincoln City and Cannelton and Tell City was intolerable and must be put in better shape if it was possible to do it. I went over the matter very fully with Mr. Coffee, and impressed him, as I think, that his company owed a duty to the public to provide better service, and that conditions were such that unless he could make it very much better than it is now the Commission would have to attempt to take mandatory steps to put it in better shape.

Mr. Coffee stated that his company had been considering the matter, and I think the intention of the company is to put in within the next 30 days a new schedule. I attach to this report copy of the time card of the Southern Railroad, which on page 6 shows the present schedule between Cannelton and Lincoln City. It will be noted that this schedule leaves Cannelton at 7:15 a. m., and returning leaves Lincoln City at 8:45 a. m., but the train leaving Lincoln City at 8:45 a. m. is a mixed train and leaves any time from 8:45 to 2 p. m., according to the complaints made by citizens of Tell City. The train leaving Lincoln City at 8:45 is not a passenger train, but a mixed train, and even when it leaves on time is very much delayed.

"Under the new schedule a passenger train will leave Cannelton at 6:50 a. m. and another passenger train will leave Cannelton at 9:40 a. m. and a mixed train at 5:45 p. m. Returning a passenger train will leave Lincoln City at 8:35 a. m., a passenger train at 8:45 p. m. and a mixed train at 11:10 a. m. I am very sure from what I know of the conditions at Tell City and Cannelton that the new schedule will be satisfactory to the people.

"With reference to complaints of a delay in order to turn the engine when the train has nearly arrived at its destination, Mr. Coffee assured me that this would be corrected at once, and that hereafter the train would run to destination before the engine was turned.

"I have stated to the Hon. Jno. Sweeney, who represented the people of Cannelton in making this complaint, that I knew personally that the Southern Railroad had laid off all the men in its shop at Princeton, and that its earnings had so fallen off that it had become a very difficult matter to operate the road. However, the service on the branch has become so very bad that it does not afford reasonable service to the people.

"As stated above, however, if the changes indicated in this report are made I believe there will be no further cause for dissatisfaction, and I am of the opinion, and so report, that the new schedule will be put in within the next thirty days."

A. R. 399. Depot at Straughn.

Petition by citizens of Straughn and vicinity for station. The matter being considered with the T. H., I. & E. Interurban Railroad, and a hearing had thereon, the matter was dismissed. The report filed in the course of the investigation reads as follows:

HUNT, Chairman:

This is a proceeding to require the construction and maintenance by the respondent of a depot and passenger and freight facilities at the town of Straughn, Indiana. Straughn, Indiana, is an incorporated town of about 250 inhabitants, between 20 and 22 miles west of Richmond, Indiana, on the line of the Terre Haute, Indianapolis & Eastern Traction Company from Richmond, Indiana, to Indianapolis, Indiana. It has one hardware store, two general stores, a grocery store and restaurant; also blacksmith shops and schools. The traction company has no facilities for handling freight shipments and no shelter for passengers, except as they may go into nearby stores. A truck is kept at this place, upon which freight may be placed,

but it is not adequate for all the needs of the town, and more or less freight is placed in the roadway, the stop for the traction company's cars being in the middle of the town street, where such freight must remain until picked up by the car or called for by the consignee. The freight is unloaded in the street, and, therefore, the construction of a platform is not practical. During the period from November 1st to 21st, inclusive, 8 outbound and 82 inbound consignments were noted. The total revenue from this freight was \$30.57. In addition to this amount of freight was a considerable shipment of milk shipped from this point, but upon milk tickets sold from Lewisville, and, consequently, credited to Lewisville instead of Straughn. The amount of freight paid on this milk amounted to about \$90. During a period of six days there was reported 465 passengers carried into and out of Straughn, at a revenue of \$51.14. Twenty-eight local cars are stopped only on flag at this point, and six limited trains do not stop. The average number of passengers per car to and from Straughn is less than three. One resident of the town offered to act as agent for the traction company upon a five per cent. commission on outbound business, upon the payment of his rent of \$7 per month and \$4 per month for heat and light, allowing passengers to use his storeroom as a waiting room and to permit the storage of small freight. The company at one time maintained an agent at this place, but the agent refused to continue on the commission basis, and the company has since been unable to procure an agent at a satisfactory price.

CONCLUSIONS.

The proposition of — Willis, referred to above, to take the agency for the traction company for \$7 per month for rent and the payment of heat and light expense, and a commission of five per cent. on outbound business, was not deemed by the company practicable, and does not seem so to the Commission, for the reason that Willis stated on the witness stand that he could not take care of any large freight, but could only use his store for a waiting room and to handle such small freight as could be stored conveniently therein, which would leave large freight, such as household goods, unprotected and without care. Besides the company contended that the expense of something over \$100 a year, in addition to the commission, would more than eat up the net income of the station. The law requiring railroads to maintain depots in towns of 100 population, or more, by the terms of the statute applies specifically to steam railroads, and any order that the Commission might make requiring an interurban railroad to maintain a station would have to be made under its general supervisory powers for the protection and welfare of the public, and the Commission in making such an order would necessarily have to exercise large discretionary powers. Conditions are not propitious for the adding of any burdens of expense to the traction lines, unless such burdens are absolutely necessary for the public safety, and the Commission is of the opinion that it is not warranted in requiring the maintenance of a station at this place, and that the small amount of business transacted and the light revenue derived from both passenger and freight traffic would not warrant the traction company in constructing a depot and maintaining an agent under present conditions.

For these reasons the petition is hereby dismissed.

A. R. 400. South Bend Rates on Coal.

Correspondence and conference between the Commission and shippers of South Bend concerning rates on coal. After repeated attempts by the Commission to secure a reduction in these rates from the Vandalia and the Big Four, the matter was formally presented by a petition filed and docketed as regular sauses Nos. 280, 281, which see.

A. R. 401. Application for Depot at Pierceville, Indiana, on the Baltimore & Ohio Southwestern Railroad.

This matter grows out of an inspection from the Commission's inspection bureau advising the Commission that the proper station facilities were not maintained by the Baltimore & Ohio Southwestern Railroad Company, at Pierceville, Indiana, a town of 250 population, the business of the company being handled in a local grocery store. Some months after this inspection report, to wit: on October 16, 1908, C. J. Schroder and other citizens of Pierceville, Indiana, filed a petition with the Railroad Commission of Indiana for a suitable and proper depot and station building. The matter is under consideration by the Commission and the railroad company for several months prior to the filing of the petition and after the filing of said petition the Baltimore & Ohio Southwestern Railroad Company agreed to construct and maintain a suitable depot at Pierceville to accommodate the traffic at Pierceville and vicinity. While the work on such depot has not been commenced at this date, the Commission is assured that the station building will be constructed early in the spring, and consequently retain jurisdiction of the matter.

A. R. 402. Dangerous Crossing at Milroy.

Complaint by F. C. Green of dangerous highway crossing at Milroy. A conference was had with the Big Four Railway and the latter submitted blue print showing layout of tracks. The Commission advised it would visit the premises at an early date. Meanwhile the general superintendent of the Big Four issued a bulletin that all trains passing through Milroy should run at a speed not exceeding twelve miles an hour. This bulletin is enforced.

A. R. 403. Depot and Station Facilities at Whiteland.

Petition by D. L. Phipp et al. for depot and station facilities at Whiteland. After correspondence with the I. C. & S. Traction Company, the Commission ascertained that the railroad had made arrangements for accommodating freight and passenger traffic. The

matter being further investigated by the Commission's inspector, the proposals of the railroad were submitted to the petitioners and the cause continued indefinitely at their request.

A. R. 404. Station Facilities at Colburn.

Petition by citizens of Colburn for depot and station facilities on the Ft. Wayne and Wabash Valley Traction line. The matter being investigated, the Commission ascertained that the railroad was negotiating with a town resident for an agency, which has since been completed, and the matter is closed.

A. R. 405. Interchange Shipments of Gravel at Orestes, Indiana.

On May 8th, 1908, the Madison Construction Company requested the Commission to investigate the situation with reference to the delivery of cars to and from the gravel pit of said company, at Orestes, Indiana, by the Lake Erie & Western Railroad Company, to be loaded for use in construction work on Indiana Union Traction line, the construction Company contending that the Lake Erie & Western Railroad Company did not make connection with the interurban line, but simply were connecting with the track of the construction company for the purpose of delivering and receiving cars to and from said track. The matter was referred to the Lake Erie & Western Railroad Company, and upon assurances from the Commission that its act in making connection with the interurban line would not be considered as a precedent for requiring said railroad company to establish physical connection or interchange of traffic with any interurban railroad in this State, said railroad company agreed to make this physical connection with the interurban railway, requested by the Madison Construction Company, which was subsequently done.

A. R. 406. Train and Station Service at Rossville.

Complaint by citizens of Rossville as to train service and station accommodations. The matter has been taken up with the Monon Railway and is still pending.

A. R. 407. Depot at Fulton.

Petition by citizens of Fulton for replacement of station which had been burned. The matter was taken up with the C., C. & L. Railroad, which advised that plans and specifications had been prepared and bids invited, and that the work would be pressed to completion. The cause is still pending.

A. R. 408. Switching Track at Franklin.

Complaint by Pinell-Engler Lumber Company, of Franklin against the Pan Handle, concerning refusal to switch cars to their plant on account of lateral obstructions. The Commission sent its inspector to visit the premises and upon his report coming in, concluded that it could only advise that the track be lined away from the obstruction. The conclusions of the Commission were as follows:

This case comes on an informal complaint by the Pinell-Engler Lumber Company, of Franklin, Indiana, alleging that for a number of years the Pittsburgh, Cincinnati, Chicago & St. Louis Railway Company maintained a switch track from its main line in the city of Franklin, Indiana, where the same crosses Jefferson street, to the plant of the Pinell-Engler Lumber Company. When this switch was originally constructed, and for a number of years thereafter, it ran parallel with said main line of said railway, but a few months ago it was changed, without the consent of the petitioner, so that the south end of it was several feet west of its former location. About the time of this change in the location of the track the lumber company constructed a concrete wall for their coal bins along this track, and since the construction of said wall the railway company has refused to switch cars onto said track, claiming that it constitutes a dangerous lateral obstruction, within the meaning of the statute, and insisting that the lumber company must move said wall away from said track before the switching service will be resumed. Both the lumber company and the railway company claim sufficient title to the ground upon which the bins and track are located to warrant the present location of each structure, and the lumber company now seeks to have the service performed in placing cars upon said switch pending a suit to settle and quiet the title.

When this case was first presented to the Commission it was of the opinion that it presented simply an inspection matter, and proceeded in an informal way. Later the Chief Inspector of the Commission was instructed to go to Franklin and report whether or not the switching service could be performed without danger. His report to the Commission discloses the fact that the wall of the bin was closer to the track than the law permits. However, the main question is one of real estate title, which the Commission, of course, has no power to determine. Neither can we make an order in a case that is heard informally upon complaint without hearing and without notice, but we would suggest and recommend that the railway company should enter into a contract with the lumber company to perform the switching service, and that said lumber company should agree that the performance of such service should in no wise affect the title to said real estate, and that the service should only be performed under contract during the litigation to quiet the title. When such a contract is made, then the railway company should line its track the proper distance away from the structure, and perform all necessary switching service for the Pinell-Engler Lumber Company.

A. R. 409. Passenger Train Service.

Petition by F. B. Callahan et al. for better train service on I. & C. Traction Company, between Indianapolis and Greensburg. The matter has been taken up with the railroad and is pending.

A. R. 410. Train Service at Mays.

Complaint by Alden Colter of train service at Mays. The matter has been taken up with the L. E. & W. Railway.

A. R. 411. Dangerous Crossing.

Complaint by T. H., I. & E. Traction Company of proposed extension of highway in Clay County over traction company's right-of-way. The Commission held a conference with the board of county commissioners of Clay County and the county attorney. The latter agreed to investigate the matter, with the view of protecting the crossing. The Commission wrote to the traction company, urging it to afford needed protection at this point. Pending.

A. R. 412. Demurrage.

Request for construction of car service rule No. 1 as to notice of arrival of cars. The Commission requested the Indiana Car Service Association to express an opinion upon the facts of the case. This was done and the Commission has advised as follows:

The Commission has had under consideration the subject of a proper construction of car service rule No. 1, as applied to your situation. The facts, as we gather them from your correspondence, are these:

You receive carload freight over the Pennsylvania Railroad, which is usually turned over to the Vandalia for final delivery. The latter places these cars for unloading on the two Capitol and Senate avenue team tracks, whose capacity is ten cars each, and which are most convenient for your purposes. In some instances, however, your cars are held at the West street yards until there is room for them upon the team tracks above mentioned, and you sometimes unload from those yards. The Pennsylvania gives you a written notice when the cars arrive in the city, but you receive no written notice, and seldom a verbal one, that the cars have been placed for unloading. Under these circumstances you ask whether you are entitled to a written notice from the railroad company after a car has been set on its unloading tracks?

The Commission's demurrage rules which apply are as follows:

Rule 1. Railroad carriers, within 24 hours after the arrival of freight, shall give legal notice to the consignee of arrival, and shall place cars for unloading, except that 24 hours may be allowed for placement in cases set out in Rule 3 of Indiana Car Service Rules.

Rule 2. A charge of one dollar a day or fraction of a day shall be made on each car placed for loading or unloading after the expiration of 48 hours from 7 a. m. *next following notice of arrival and placement or offer to place.*

The statute provides: "The Commission * * * may so enforce for each railroad, or for all railroads alike, reasonable rates for storing and handling of freight, and for the use of cars not loaded or unloaded within 48 hours *after notice of arrival and placement for service*, not to include Sundays or legal holidays." (Acts 1907, p. 459.)

From the above it is clear that the free time ends 48 hours after the receipt of a notice containing the information that the car has arrived and has been placed at a designated place for service. The language of both Rule 2 and the statute is, "notice of arrival and placement." There can be only one point of time from which the free period is to be calculated; hence, it would be absurd to construe the above language as if it read, "after the expiration of 48 hours from 7 a. m. next following notice of arrival and 48 hours from 7 a. m. next following placement or offer to place." The same notice which informs the consignee of the arrival of the car also tells him the same has been finally placed for unloading, and should give him sufficient directions as to how he may locate it. The 48 hours' free time thereupon begins to run when such a notice has been given, and not until then.

The above construction is eminently fair in your case. The Commission understands that you sometimes unload from the West street yards and sometimes from the team tracks on Capitol and Senate avenues. It is within the power of the railroad to locate the cars at one point or the other for unloading. It is, therefore, only just to you that you should be apprised which place the carrier has selected.

In this connection I desire to call your attention to the possible refusal of the railroad to deliver any dead freight on its Capitol avenue team tracks. It is stated in Mr. Mummert's letter that the agent is instructed to place all dead freight for team track delivery at the West street yard, and reserve tracks 1 and 2, between Senate and Capitol avenues, for perishable and high-class freight, and that the latter tracks are only used for the dead freight when they are not fully occupied with high-class freight; but that, in order to accommodate you, freight has, for the past two years, been placed on the Capitol avenue tracks so that it might be nearer your plant. If the carrier saw fit to do so it probably could require you to haul all of your freight from the West street yard. This possibility is merely thrown out for your consideration.

As your inquiry is directed to the general situation and not to any specific instance of demurrage charges, the foregoing is not to be construed as expressing an opinion upon the merits of any claim for demurrage which the carrier may be making against you.

The opinion of the Commission, therefore, is that, under the circumstances above set forth, you are entitled to written notice of the placement of a car which has arrived; except that, under Commission's rule No. 1, telephone or other notice may be used by written agreement in place of legal notice.

A. R. 413. Excess Fare on I., C. & S. Tr. Co.

Complaint by George E. Field of overcharge in passenger fare. The matter was taken up with the railroad and the latter justified the charge on the ground of special (limited) service. Closed.

A. R. 414. Subway on St. Louis Division of Big Four.

Complaint concerning dangerous crossing on Big Four near Danville. The Commission took the matter up with the railroad, which denies that crossing is dangerous. The Commission sent its inspector to view the premises. On his report coming in, the complainant was advised that the Commission could not secure the subway by negotiations and requested that a formal petition be filed, if desired. Pending, awaiting action by petitioner.

A. R. 415. Freight Station at Ellsworth.

Complaint by S. C. Keith of lack of freight accommodations at Ellsworth. The Commission laid the matter before the C. & E. I. Railroad, with a full statement of local conditions. The railroad has replied to the Commission's numerous communications, declining to furnish the accommodations requested.

A. R. 416. Defective Roadway and Unprotected Crossings at Amo.

Complaint of defective roadway and dangerous crossings in Amo. The Commission has taken the matter up with the T. H., I. & E. Traction Company and the Vandalia. The cause is still pending.

A. R. 417. Excess Baggage Rates.

Complaint by C. A. Lee, of Terre Haute, as to excess baggage charges of the T. H., I. & E. Traction Company. The Commission has taken this matter up personally and by correspondence with the traction company and the same is now pending.

A. R. 418. Dangerous Crossing at Dugger.

Complaint by town of Dugger that the Indianapolis Southern has failed to comply with a town ordinance requiring a watchman at its crossing. The Commission took the matter up with the company, and the latter denied the validity of the ordinance and the need of a watchman. The Commission sent its inspector to view the premises, and upon his report coming in, a copy of the same was sent to the company. The latter advises that it will inform the Commission at an early date what it is prepared to do in the matter.

A. R. 419. Station at Detamore.

Complaint as to lack of station accommodations at Detamore on the line of the Muncie and Portland Traction Company. The Commission has the matter under consideration with the railroad, and the latter advises that the required accommodations will be furnished at once. Closed.

A. R. 420. Switch Construction.

Complaint from W. H. H. Asbury and W. W. Ray, as to failure of the E. & I. Railroad to construct a switch connecting the Asbury mine near Clay City with its tracks. The Commission conferred personally with the E. & I. representative, and has advised that a conference be held between the Commission, the complainants and the railroad. No reply to this suggestion has been received from the complainants, and the matter is still pending.

A. R. 421. Excess Fare Between Southport and Indianapolis.

Complaint of overcharge of fare between Southport and Indianapolis on the I., C. & S. Traction line. The railroad, in answer to the Commission's inquiry, justified on the ground that the service was special, and covered by tariff on file with the Commission. The Commission advised the complainant that the service was alleged to be special, but if it was not so, in fact, the complainant could present the matter by formal petition to the Commission. Pending, awaiting action by complainant.

A. R. 422. Station Accommodations at Cottage Grove.

Complaint by W. F. Winchester, of Cottage Grove, as to passenger accommodations. The Commission took up the matter with the C., H. & D. Railway Company, and were advised that the former station had been burned, but a new station would be erected soon. The matter there rests.

A. R. 423. Passenger Rates on the Indiana Union Traction Line.

Complaint by M. L. Garrigus as to rates charged for passenger service on Indiana Union Traction line. The Commission took the matter up with the railroad, and was advised the rates were charged under authority of the franchise granted by the towns and cities through which the road extended. A copy of this reply was sent to the complainant and he was invited to file a formal complaint if he so desired. Nothing further being heard from him, the matter was closed.

A. R. 424. Rates on Logs.

Complaint against G. R. & I. Railroad as to rate demanded for logs shipped over the Pan Handle and G. R. & I. from Strawns to Ft. Wayne. The Commission advised that the contention of the railway was correct, inasmuch as the rate charged was the only legally published rate.

A. R. 425. Station at Fairland.

Petition by A. F. Shuler for new station at Fairland, on the line of the Big Four. The Commission visited the premises, and after a formal hearing, recommended certain changes to the railroad, which were complied with and the station completed to the satisfaction of the Commission. See regular docket No. 259.

A. R. 426. Exclusive Telephone Service by Carrier.

Inquiry as to right of a carrier to give the exclusive use of its baggage room telephone to one patron. The Commission advised as follows:

"Your favor of October 22nd, addressed to the secretary of the Commission, is at hand, asking whether a private corporation may, at its own expense, install a telephone in the baggage room of a railroad company for the former's exclusive use.

"So far as the railroad is concerned, there would seem to be no impropriety in its agreeing to this arrangement, provided it were willing to accord the same privilege to any other person who desired to install a telephone in its baggage room.

"Your question is a novel and interesting one, so far as relates to the duties of the telephone company. The writer has serious doubts whether the company could lawfully agree to refuse to call the baggage room except when the installing concern asked to be connected. The general rule is that a telephone company must serve all its customers equally, affording to all patrons the same facilities for intercommunication. (See Jones on Telegraph and Telephone Companies, sections 243, 244, 749.) If it were permissible for a telephone company to give to one member of the public the right to call a larger number of places than it gives to another patron, there would seem to be a discrimination inconsistent with its public duties. However, this branch of the subject is one which does not fall within the jurisdiction of the Commission, and I suggest that before you act you take the question up with your own attorney for his consideration and advice."

A. R. 427. Liability for Lost Freight; Connecting Carriers.

Inquiry as to liability for lost freight where there are successive carriers.

The Commission advised as follows:

"Replying to your favor of the 31st ult., in regard to claim against a carrier for goods lost or misdelivered by a connecting line, I beg to say that the rule in the United States, and in Indiana, upon the subject is thus announced by the Appellate Court of this State:

"The general doctrine as to transportation by connecting lines, recognized by the Supreme Court of the United States, and also a majority of the state courts, is that each road, confining itself to its common law liability, is only bound, in the absence of a special contract, safely to carry over its own road and safely transfer to the next connecting carrier."

Penn. Co. v. Dickson, 31 Ind. App. 451, 457.

Accord. see

L. E. & W. R. R. Co. v. Condon, 10 App. 536.

U. S. Ex. Co. v. Rush, 24 Ind. 403.

R. R. Co. v. Woodward, 164 Ind. 360.

R. R. Co. v. Bryant, 36 Ind. App. 340.

R. R. Co. v. Teeters, 74 N. E. 1014 (Ind. App.),

"Your bill of lading, or other contract with the initial line, will determine your rights as against the latter. It is usual for the first carrier to limit its liability to what occurs upon its own road, and to agree only to deliver to a connection railway. In such a case the first road is exonerated as to loss happening after the goods leave its hands.

"The second, or connecting, line is liable for its own delinquencies, and if the loss occurred on its road you can bring suit against it. In proving your case it would be necessary to show a delivery by the first carrier to the second. This could be done by examining the proper representatives of the first carrier and calling for documents in their possession showing delivery to and receipt of the goods by the second line. A record of all shipments is kept by the railroads.

"Where the goods have been finally delivered by the last carrier in a damaged condition the weight of authority is to the effect that the presumption is they became damaged while in the hands of the last carrier. See 6 Cyc. of Law and Procedure, pp. 490-491, and note 40."

A. R. 429. Inquiry Whether Gasoline Motor Required to Stop at Railroad Crossings.

Hon. S. K. Ganiard, of Lagrange, Indiana, inquired of the Commission whether or not a gasoline motor running the rails of the St. Joseph Valley Traction comes within the definition of "motor vehicles," as given in paragraph 10,464 Burns' Revision of 1908. The Commission replied that such motors running on rails are not within the definition of the statute. The Commission held also that motormen running such motors could not be prosecuted for failing to stop at railroad crossings. The Commission suggested that these omissions of the law should be remedied at the 1909 session of the General Assembly.

A. R. 430. Claim Against the T. H., I. & E. Traction Company for Lost Suitcase.

Hon. O. P. Gothlin applied to the Commission asking that it use its efforts to have the claim of Mr. R. B. Williams of collecting for a suitcase lost on the T. H., I. & E. Traction line paid. Matter taken up by Commission with the Traction Line and check forwarded to Mr. Williams in payment of claim.

A. R. 431. Prevention of Railroad Accidents; Inquiry from Toronto, Canada.

Parker, Clark & McEvoy, of Toronto, Canada, inquired of the Commission with reference to laws of the state, and rules and practices of the Commission as to the prevention of railroad accidents. The Commission answered enclosing copy of the transportation laws and copy of accident bulletins and other information.

A. R. 432. Discrepancy in Railroad Fares.

The Commission called the attention of the railroad authorities interested to the fact that \$3.40 was charged from Indianapolis to Evansville, while \$3.38 was charged from Evansville to Indianapolis. This matter was thereupon corrected so that the same charge was made thereafter from both places.

A. R. 433. Interstate Passenger Fares.

Inquiry from Mr. A. M. Garrett whether or not he was overcharged on a ticket from Chicago to Huntington. The Commission responded that this was an interstate matter and that he should make complaint to Mr. E. A. Moseley, secretary of the Interstate Commerce Commission, Washington, D. C.

A. R. 434. Inquiry as to Duties and Action of the Commission with Reference to the Physical Road.

Mr. H. Raynor Wilson, of London, England, who is writing a book on governmental regulations for the safety of railways, inquired of the Commission with reference to its duties and actions in the matter of preventing accidents and supervision of the physical road. Commission responded, sending to Mr. Wilson copies of transportation laws, of our annual reports, of our accident bulletins and circular letters referring to accidents. The Commission also responded as follows:

"We are of the opinion that our close inspection of the physical road and of the management and operation of railroads is accomplishing a great deal of good. An inspector of safety appliances has just reported verbally that during two or three days' work in the railroad yards of Indianapolis, the capital of this State and its largest city, that he did not find a single car out of order.

"The railroad companies generally co-operate with this Commission in its work for the prevention of accidents. The Commission has been in existence only three years and its organization is not as perfect as it would like to have it, and will have it, but the results accomplished show that careful regulation of the physical roads will do a great deal to prevent accidents."

A. R. 435. Block Signals.

Inquiry from L. B. Mackenzie, managing editor, Signal Engineer, as to the meaning of the Indiana statute requiring the carriers to construct an approved block system. The Commission responded that it had not made any general order as to what is an approved block system, nor has it prescribed what block system the roads shall put in, this matter to be taken up with each road as application to the Commission is made and approval asked for the systems proposed by them.

A. R. 436. Disinfecting Cars.

Brandt Bros. Mfg. Co., of Chisago City, Minn., inquired of the Commission whether or not any law of this state required the disinfection of cars. The Commission replied as follows:

"There is no law in this State requiring railroad companies to disinfect their cars after unloading fruits and vegetables."

A. R. 437. Delays of United States Mail.

Mr. Chas. Frick, of Tell City, Indiana, complained to the Commission that trains were so delayed on the Southern Railroad that the United States mail was delayed. The Commission responded, advising that he should get relief by applying to the United States postal authorities.

A. R. 438. Giving Out Information About Accidents.

Inquiry from Samuel O. Dunn, of Chicago, asking information as to wreck on the B. & O. one mile west of Milan, in which W. S. Stigers, conductor, was killed. The Commission responded as follows:

"The information gathered in accident cases is not published; is not, indeed, accessible to anyone except the Commission. If we gave out the facts attorneys who brought suits would insist upon using the evidence obtained by us, and when this was done our investigations made for the purpose of preventing accidents would be hindered."

A. R. 439. Shipping Days for Oil from Indianapolis and Terre Haute.

J. V. Zartman, secretary of the Indiana Manufacturers' and Shippers' Association, complained that some of the carriers did not provide enough shipping days for shipments of coal oil from Indianapolis and Terre Haute. This matter referred to Commissioner Wood, who took the same up with the carriers and arranged a conference between the carriers and Mr. Zartman, the complainant, at which time this matter was settled satisfactorily to all concerned.

A. R. 440. Overworking Telegraph Operator.

Complaint from Mr. E. H. Dodge, of Warsaw, Indiana, that Big Four Railroad Company had worked Collins Eiler, a telegrapher, twelve hours and more, was received. The Commission responded that it had no jurisdiction, but had referred the matter to the Interstate Commerce Commission. The Interstate Commerce Commission responded on September 11th that they had taken the matter up with Mr. C. E. Schaff, vice-president of the New York Central Lines, who stated that this operator was not on duty more than nine hours, and that they had his statement to that effect. Matter closed.

A. R. 441. Classification of Thin Cut Lumber.

Complaint September 17th from Evansville Veneer Company that, although the Commission had made an order requiring companies to classify cross-banding and filling, and other thin cut lumber not veneers, as sixth-class; that the carriers had reissued Official Classification No. 32, in which they attempted, notwithstanding our order, to carry on that classification. The Commission responded as follows:

"I am directed to reply that a suit has been brought against this Commission to set aside the classification on thin cut lumber made by it, and pending this suit it seems to us unwise to take any further action. We understand, however, that although this suit has been commenced, the railroad companies are observing the order of the Commission in any case where shipments are made in the State of Indiana. Is this not true of shipments made by you? If not, and you will advise us of any case where you offer a shipment entirely within the State, and any classification is applied other than that made by this Commission, and will advise us of the fact, we will take such action as the case demands."

Nothing further having been heard from the complainant the matter was closed.

A. R. 442. Interstate Transportation.

Mr. Benjamin Roberts complained that during an excursion trip from Toledo, Ohio, to Indianapolis, they were delayed, although they had been assured that they would be brought through without delay from Toledo to Indianapolis. The Commission responded that it had no jurisdiction over this matter and complaint should be made to the Interstate Commerce Commission.

A. R. 443. Delays in Interstate Shipments.

Complaint of Samuel Hunsucker & Sons, of Vallonia, Ind., of great delay in shipments from Cincinnati to Vallonia. Matter taken

up with Mr. S. T. McLaughlin, G. F. A., B. & O. S. W. R. R. Co., who responded that the shipment from Seymour referred to by Mr. Hunsucker, suffered no delay and was given prompt handling. Mr. McLaughlin also said: "As regards the shipments from Cincinnati, with all respect to the Commission, kindly permit me to say that this is interstate business." To this the Commission advised Mr. McLaughlin as follows:

"We note that you also remind us that the other shipments complained of are interstate business. This is true, and it was not the intention of the Commission to attempt to regulate that business in any mandatory way. It has, however, been our experience, we are glad to say, that with most of the carriers where we call their attention to any delay or neglect of any kind, whether interstate or intrastate business, they have very promptly taken the matter up without reference to the character of the business, and assured us that they would endeavor to correct the same."

A. R. 444. Confidential Communications.

Inquiry from Mr. J. L. Nichols, superintendent Chicago Terminal Transfer R. R. Co., of Chicago, as to whether a photograph of Engine No. 110 had been sent to the Commission. The Commission responded as follows:

"Your letter of November 21st, in which you inquire if a photograph of your engine 110 had been sent to this Commission, was received. In reply I am directed to say that no such photograph or information has reached the Commission, but I am directed also to say that while on the one hand the Commission declines to furnish information to attorneys and others desiring to use its records in damage suits against the railroad companies, it would probably also decline to furnish the name of any person who had made to it a confidential communication with reference to any matter likely to prevent an accident. However, that question does not arise in this case, since the information in this matter has not been given to us."

A. R. 445. Elevation of Telegraph and Trolley Wires Over Railroads.

Inquiry from E. A. Everitt, Signal Engineer, Michigan Central Railroad Company, as to proper elevation for wires above the track. The Commission responded, referred to section 5786 Burns' Revision 1908, requiring that all such wires shall clear the top of the rails at least 25 feet, and that in no case shall these wires be elevated less than 22 feet above the steam railroads.

A. R. 446. Temporary Bridge Elevation, Less Than Legal Clearance.

Application from Big Four Ry. Co. for permission to put up

temporary overhead highway bridge near Delmar on St. Louis division. Commission responded, declining to make an affirmative order in reference to this matter.

A. R. 447. Overcharge in Passenger Rates Between Argos and Templeton.

Isaac Brown, of Oxford, Indiana, complained to the Commission that he was charged more than two cents a mile for a ticket from Argos to Templeton. Matter taken up with Lake Erie & Western Railway, who responded that the overcharge was a mistake on the part of their agent at Argos, and that they had sent a draft to Mr. Brown reimbursing him for the overcharge.

A. R. 448. Passengers to Show Tickets Before Entering their Trains.

Complaint of Victor Levor, of Attica, that he was required to show his ticket before getting on train. The Commission responded as follows:

"We think that it is a reasonable regulation for passengers to show their tickets before entering trains. Besides collecting tickets the conductor is charged with the safe operation of his train. He has a great many other duties to attend to. If each passenger shall have a ticket it will enable him to perform these duties better than if he were required to take up time in collecting cash fares and making change. For this and many other reasons the rule requiring passengers to show their tickets is a reasonable one."

A. R. 449. Whistling for Overhead Highway Crossings.

Inquiry by Mr. P. Laden, superintendent of the Indianapolis Southern Railway Company, whether Section 5431, volume 2, Burns' Revision 1908, requires engineers to whistle for crossings where the highway crossing is over or under grade. The Commission responded as follows:

"We are of the opinion that section 5431, Vol. 2, Burns' Indiana Statutes, Revision 1908, referring to engines whistling proper crossing signals for highway crossings, applies to all crossings of the highways, whether the same are at grade, over grade or under grade. No exception is made in the statute, and we think that the signals ought to be given in order, among other things, to notify persons about to cross the railroad that their teams might be frightened by the approaching trains so that they could stop at a proper distance until the trains had passed by.

"Whatever may be the reason, the law as it is written applies to all crossings, and we do not think that the Commission has the authority to set it aside.

"Another reason that occurs to us for preserving the integrity of the law and its application in all cases is that an engineer, if he were allowed not to give the signal at such crossings as are not at grade, might make a mistake and fail to give the signal at grade crossings. If he is required to give them at all his mind will be alert to the fact that the signals must be given, and the better practice would be to give the signals at all the crossings."

A. R. 450. Stopping at Crossings.

Mr. P. Laden, superintendent Indianapolis Southern Railway Company, inquired of the Commission whether or not, in case of a train stopping at a water tank 1,500 feet from a crossing, and it is upgrade to the crossing, there would have to be another stop at the crossing. The Commission replied as follows:

"I am directed to reply that from a careful study of the statute in question, the Commission is of the opinion that the law requires the stop to be made at the crossing. We do not feel authorized to construe the statute to mean that a point 1,500 feet, nearly a quarter of a mile, from the crossing is at the crossing. The statute itself is very precise and drastic. It is rigid in requiring the stop to be made at all crossings, except such as are protected by interlocking devices. We have been impressed with the idea from former consideration of this subject that there might be exceptional cases in which the Commission should have the power to modify the rigor of this rule, but we have no such authority; the courts would not sustain us in a construction of the statute which held that a point 1,500 feet away from the crossing was a point at the crossing, and so we are unable, in your case, to modify the rule or to give you any relief from its operation. If any person should prosecute one of your engineers for failing to stop, the very extreme penalty of the statute might be applied. Under such circumstances we would hardly think it just to them or to you to attempt to make an exception we have no authority to make, so that we are unable to do anything now. We expect to recommend some changes in the law at the next session of the legislature which, as you know, meets the first of next January."

A. R. 451. Request that Commission Cancel Demurrage Rate on Account of Weather.

Abe Fineberg, of Muncie, Indiana, complained that the Lake Erie & Western Railroad charged him with demurrage, failing to make proper allowance for rain. The petitioner was engaged in the scrap iron business. The Commission responded that the rule made by the Commission provided that "If the severity of the weather would cause material damage to the freight, reasonable additional free time should be allowed," and suggested to the complainant that he read the rule carefully in order to determine whether or not the weather was so severe that he could not secure

means of unloading or whether removal during the rain would cause material damage to scrap iron. Nothing further was heard from the petitioner and this matter was closed.

A. R. 452. Overcharge Interstate Passenger Rate.

Complaint of Jacob Kantz, of Nappanee, Indiana, of overcharge, railroad trip from Nappanee to Chicago and return. Advised that we had this matter up several times with the Interstate Commerce Commission, but had no authority to regulate the matter.

A. R. 453. Refund Checks.

Complaint by Harding & Miller Music Company, Evansville, Indiana, that L. & N. R. R. Co. failed to give refund checks, but gave cash receipts instead. Matter taken up with the L. & N. R. R. Co., who insisted that they were using and would use refund checks as provided for by law, and matter closed.

A. R. 454. Side Tracks to Industries.

Chas. M. Niezer & Co., of Monroeville, Indiana, ask construction of Paragraph K, Section 5533 Burns 1908, with reference to building of side tracks to factory outside of right-of-way. Commission answered calling attention to the Jennings Case, pages 85 and 87, second annual report, and to the fact that this case was now pending in Superior Court of Marion County, a suit brought by the carrier to set aside order of the Commission.

Since we advised Niezer & Co., the Superior Court has decided that the expenses of such switches must be borne by the owner of the property.

A. R. 455. Refunds.

Corydon Hub Factory complained that the Louisville, New Albany & Corydon Railroad Company had failed to pay back to them certain illegal charges made for switching cars. This matter grew out of the fact that the Commission had required this company to switch to the Hub factory at Corydon without charge, because this company switched for other factories at the same point without charge. The Hub factory claimed a refund for charges made before the action of the Commission. Complainants advised that the Commission had no jurisdiction over claims for refunds.

A. R. 456. Refunds.

H. Perfect & Co., of Ft. Wayne, Indiana, complained, asking a refund for drayage paid on account of misrouting a carload of

cove oysters from Pass Christian, Miss. Matter taken up with the Louisville & Nashville Railroad Company, who responded, showing that they were without fault in the matter, and they referred the claim to the freight claim agent of the Pennsylvania Railroad. L. & N. R. R. further advised that the Pennsylvania Lines had submitted the matter to the Interstate Commerce Commission. Perfect & Co. notified, nothing further from them, matter closed.

A. R. 457. Demurrage.

Complaint of Marion Iron and Brass Bed Company, of Marion, Indiana, that they had two plants and cars were set so that they would be partly loaded at one plant and partly loaded at the other plant. Inquiry whether or not it would have more than forty-eight hours to load the car. The Commission answered as follows:

"It seems to us that in a case of this kind you and the railroad company should get together and arrange this matter so that the switching can be done from one plant to another conveniently for both of you within the 48 hours, if possible. The main facts and principle to guide you in the entire transaction, as we see it, would be that you have 48 hours to load the car, within which time it must be completely loaded, whether you find it necessary to load at one plant or at both plants, and that it would be impossible, it seems to us, for the railroad company to furnish you with a switch engine to transfer from one plant to another except at such a time as would enable them to do switching for other persons as well as for you."

A. R. 458. Full Train Crew Law.

Inquiry from P. H. Morrissey, Grand Master, Brotherhood of Railroad Trainmen, of Cleveland, Ohio, with reference to status of the full train crew law passed by the last General Assembly. Mr. Morrissey was advised that the Commission had done all in its power to enforce this law; that it had had a conference of railroad managers, who agreed to put the law in force pending litigation in the courts; that it had employed Hon. Martin M. Hugg as special counsel to present this case to the courts, including the Supreme Court. The Commission enclosed also to Mr. Morrissey a copy of a very full letter from Mr. Hugg advising present state of litigation. On October 6 Mr. Morrissey advised as follows:

"Your favor of the 22nd ultimo came duly to hand, and I wish to thank you very kindly for the information contained therein. I will be pleased to await the court's decision on these cases and would thank you for information as to the final outcome when the decision is reached."

A. R. 459. Demurrage, Condition of Highways.

Inquiry from L. H. Mummert, manager of the Indiana Car

Service Bureau, whether where streets and roadways are in such condition that they are impassable, demurrage can be charged. Matter submitted to the Commission and responded to as follows:

"It is the opinion of the Commission that the railroad companies are not responsible for the condition of the public highways outside of their rights-of-way. A highway might be rendered impassable on account of a broken bridge or on account of other reasons. In such case cars would have to be unloaded so that they could be used by other persons to carry on the business of the country.

"And while the question might be raised as to the possibility of securing means for loading or unloading in a case where continued rains or freezes had rendered a highway impassable we are inclined to the opinion that even in that case cars would have to be loaded or unloaded within the free time so that their movement would not be retarded."

A. R. 460. Demurrage Rules.

Inquiry by Messrs. Thompson & Thompson, attorneys, Muncie, as to what car service rules were made by the Commission, and what by the Indiana Car Service Association, and whether they could get a certified copy of the rules made by the Commission. Response: "We can easily separate the Commission rules from the rules made by the Indiana Car Service Association and filed with the Commission, and will send you a certified copy of the same if you wish to order it."

A. R. 461. Accident Reports.

Inquiry from F. B. Harriman, whether accidents occurring in shops, round houses, power houses, on boats or wharves are to be reported to the Commission. The Commission answered that under our Circular No. 9 such accidents were not required to be reported.

A. R. 462. Express Rates.

Inquiry from the Railroad Commission of Oregon as to whether or not the Railroad Commission of Indiana had included express rates in this State. Answered enclosing copy of the report of the Commission on that subject.

A. R. 463. Overcharge on Oak Backing.

Complaint of the Evansville Veneer Company that the Commission's classification on backing, filler, center stock and cross banding had not been observed in shipment from Evansville to Mishawaka. Correspondence developed that this stuff had moved by an interstate route and matter closed.

A. R. 464. Physical Valuation of Railroads.

Inquiry from Railroad Commission of Kansas as to what recommendation the Railroad Commission of Indiana would make with reference to the physical valuation of railroads. The Commission, responded as follows:

"We are greatly in doubt as to whether the legislature or Governor would sanction the expenditure of money at least \$50,000 to make this valuation. We are inclined to the opinion that in order to have uniform valuation and the best results, it would be better for the Interstate Commerce Commission to take the initiative in the physical valuation of the railroad properties."

A. R. 465. Crossing of Street Railway and Steam Railroad on Streets of an Incorporated City.

Inquiry from Hon. Walter Olds, of Ft. Wayne, as to whether the Commission has jurisdiction over railroad crossing on the streets of an incorporated town or city. The Commission responded that it was of the opinion that it has no jurisdiction in such cases.

A. R. 467. Settlement for Express Matter Lost in transit. Law-suits.

Wm. Mahoney, of Oxford, complained to the Commission that the American Express Company had failed to reimburse him for a hog lost in transit from Oxford, Indiana, to Clinton, Illinois. Matter taken up by Commission with the express company, who showed to the Commission that in settling the claim, which was done promptly, they allowed to the complainant the highest price for hogs in the Chicago market on the day it was sold. Commission advised complainant that he would have to resort to the courts. However, said the Commission, "We do not advise lawsuits unless there is something to be gained, and as stated in our first letter on this subject, we called this matter to the attention of the express company with the hope of effecting an amicable settlement. The company has convinced us that it has endeavored to treat you fairly and we feel constrained so to advise you."

A. R. 468. Lateral Clearances.

Inquiry from the Southern Fire Brick and Clay Company, whether where a structure is located on property not on the railroad company's right-of-way, owner can be required to move it back to legal clearance. Commission called attention, in response to the fact that it had power to compel the railroad company to operate its line safely and that under this power it is possible that

a railroad company might refuse to operate its trains on switches where the overhead or lateral clearances were dangerous to the lives of employees.

A. R. 469. Demurrage Rules.—Uniform Rules.

Communication from A. B. Starr, general superintendent freight transportation Pennsylvania Lines, enclosing and calling attention of the Commission to the code of car demurrage rules of the American Railway Association, and recommending their adoption by the Railroad Commission. Commission responded, that the railroad companies would be at liberty to file these rules as part of their transportation charges, and that the same would go into effect so far as they did not conflict with the rules made by the Indiana Railroad Commission. It was further noted that the bunching rule seems to be adapted from the rules made by the Indiana Railroad Commission, and that the weather rule seems to be fair. The Commission also express sympathy with the proposition to make demurrage rules uniform throughout the states, and with the further proposition that the demurrage rules should be administered by the railroad companies and not by car service associations.

A. R. 470. Transportation of Explosives.

Col. B. W. Dunn, chief inspector of the bureau for the safe transportation of explosives in a letter called the attention of the Commission to the important rules adopted and promulgated by their association in this matter and requesting the support of this Commission to these regulations. Response that the Commission is much impressed with letter and report and is inclined to the opinion that it will desire the same action taken in this state with reference to the safe transportation of explosives as has been taken in Massachusetts and Virginia. Col. Dunn afterwards addressed the railroad convention on the subject, and we are informed that the rules recommended by his bureau are in effect on the railroad lines in this state.

A. R. 471. Demurrage.—Bunching Rules.

Complaint of Model Glass Works that they were charged demurrage without reference to the rule against bunching promulgated by the Indiana Railroad Commission. Matter taken up with Mr. J. R. Cavanaugh, superintendent freight transportation of C., C. & St. L. Ry. Co. After several conferences and a thorough investigation this matter was settled by applying the bunching rule to the satisfaction of complainants and all concerned.

A. R. 472. Demurrage.—Extension of Free Time.

Louis Sagalowsky applied to the Commission to extend the free time for loading scrap iron from 48 hours to 72 hours. Commission responded:

"If you will refer to chapter 241, section 3, subdivision f, page 459, Acts 1907, you will see that free time in this State is fixed by the legislature."

Matter closed.

A. R. 473. Regularity in Transportation.

Ringer, Wilhartz & Louer inquired of the Commission as to the construction of the rule against bunching made by the Commission, where there was such delay on the part of the initial line of shipments that the cars were bunched. The Commission replied as follows:

"The Commission has ruled informally that where a shipper gives his orders so that cars will come to him day by day, or week by week, in accordance with his ascertained ability to unload the cars, and the cars are bunched on him that he is entitled to additional free time for the cars so bunched, whether the irregularity in transportation occurred with the delivering line or with the initial line, or on any other line upon which the goods were transported during the particular shipment. We are unable to see how this rule could be properly construed any other way. Demurrage is a penalty imposed because of the detention of cars by the shipper for a longer period than it is necessary for him to keep it in order to unload it. Necessarily much depends upon when the car is delivered to him and the room on his switch and the force he has to unload are factors that can be measured and understood. Now, then, if the carriers so transport the material ordered by him that it reaches him in such shape that he cannot unload it, clearly no penalty ought to be imposed on him. The delivering line should look to its connection for any loss or damage on account of the delay."

A. R. 474. Train Accommodations.

Complaint by O. M. Stone, of Oakland City, of train facilities between Oakland City and Princeton. Matter taken up with the Southern Railway and carefully investigated and conclusion reached that under present conditions of business it would not be right to order additional trains, and matter closed.

A. R. 475. Convention of Railroad Commissioners of Wisconsin, Illinois, Michigan, Ohio and Indiana.

The convention of commissioners of the above states to discuss topics of mutual interest to the commissions of these states was held at Chicago on June 12, 1908; assembled again on December

3, 1908. The Indiana Railroad Commission was represented at the first convention by Chairman Hunt and Commissioner Wood. The latter called to the attention of the commissioners assembled at the convention the matter of trespassing on the railroads and fatalities upon grade crossings. Committees of which Mr. Wood was made chairman, are appointed on these subjects, and reports adopted looking to an abatement of these evils. On December 4th, permanent organization was effected under the name of "North Central States Railroad Association."

A. R. 476. Indianapolis Interchange Switching List.

Application of Frances Bergman to have carloads shipped to surface switch of Indianapolis Southern Railway. Matter taken up by Commission through Commissioner Wood, who on May 28th, replied that arrangements had been made with the Indianapolis Southern Railway to have Mr. Bergman put on the interchange switching list at Indianapolis so that his cars hereafter will be placed as desired by him. Matter closed.

A. R. 477. Passenger Train Accommodations, C., H. & D., Rushville.

Inquiry by Chas. E. Francis & Bro., whether or not the law of this state does not compel railroad companies to stop their trains at county seats. Commission responded that there is no such law in this state, and that in investigating this matter further they had ascertained that out of 12 passenger trains passing Rushville every day, 11 make stops, and that under the circumstances, so many trains stopping, Commission does not think that the railroad company could be required to stop the train of which complaint is made. Matter is closed.

A. R. 478. Rate Adjustment, Rate on Desks from Evansville to Chicago.

Evansville Desk Company complain that the rate on desks from Evansville to Chicago is 25 cents, while the rate on desks from Evansville to St. Louis is 22 cents, and requesting that the St. Louis rate be secured for Evansville. This matter taken up with the carriers, who insisted that the rate from Evansville to Chicago was, in every respect, a fair and reasonable rate. The facts stated by the carriers having been given to complainant, no further action was taken, and matter closed.

A. R. 479. Claim for Lumber Furnished for Making Grain Doors for Cars.

Cottrell Bros. complained that because cars furnished by C. & E. I. R. R. for grain had no doors they were compelled to make doors, and the C. & E. I. R. R. refused to allow them more than \$2.00 for each door made by them. Response by the Commission that this was a matter for the courts to settle and not for the Commission, and matter closed.

A. R. 480. Minimum Weights.

Inquiry from J. C. Kellar, traffic manager Evansville Manufacturers' Association as to proper practices with reference to minimum weights to be applied to cars. Commissioner Wood for the Commission replied as follows:

"As we understand it, when a shipper orders a 36-foot car from the carrier with the intention of loading a car of that capacity and with only freight enough to load a car of that capacity he is entitled to have the carrier furnish him such a car. If the carrier fails to do so and furnishes him with a larger car he is entitled to have the minimum applied to the car which he ordered. The E. & T. H. Railroad Company may make a rule of this sort, and this ought to be the practice whether there is any rule or not; indeed, on investigation we are informed that this is the custom followed by some of the largest carriers in the State. They make the rule in this way: they apply the minimum, for instance, of a 50,000-pound car when ordered by the shipper even though they have no such car, and are compelled to give him an 80,000-pound car, provided he does not load the car above the minimum for a 50,000-pound car. If he loads more than this minimum, then he is charged at the rate of the minimum for the larger car."

A. R. 481. Delays in Shipments.

Jasper Novelty Works, May 26, 1908, complained of delays in shipments from Jasper, Indiana, to Toledo, Ohio. Matter taken up with Southern Railway Company, who stated that there was no delay of the goods while on their line. Commission not having jurisdiction over the other lines matter was closed.

A. R. 482. Express Service at Mt. Vernon, Indiana.

Keck-Gonnerman Company complained of inadequate service for the express business at Mt. Vernon, especially that there was no person in the office to receive packages. Matter taken up with Adams Express Company, who insisted that they were doing all that was possible, considering the amount of business at Mt. Vernon, and further stating that they were now endeavoring to arrange with the Wells, Fargo & Co. to consolidate the two offices, in which

event their agent would remain in the office nearly all the time. Under these circumstances the Commission thought it best not to make any order against the company.

A. R. 483. Passenger Service, Augusta, Marion County, Indiana.

Complaint of W. B. McDonald and other citizens with reference to insufficient train service at Augusta. Commission took this matter up with Mr. Houghton, general superintendent, who showed that on account of building of the traction line through this country the patronage of the railroad trains had so decreased that the revenue received from it was less than the cost of operation, and hence they had to be taken off. There would then be no way to provide this service except to stop No. 19 limited Chicago train. It was also shown to the Commission that the interurban railway passed within a mile and a half of this station, and therefore, the Commission said:

"It would not be proper exercise of our power, if we have the power, about which there is some doubt, to require this company to stop No. 19 under the circumstances above detailed. We regret very much that we cannot secure the accommodation for your citizens that they desire, and we shall keep the matter in mind with reference to changing conditions and changing schedules, with the hope that business will revive and other trains be put on to the end that your people may have all the accommodation that they need and want. We expect to call this matter to Mr. Houghton's attention and ask him at his earliest opportunity to provide better facilities, but, as said above, we cannot see our way clear now to do what we would like to do for you."

A. R. 484. Unsanitary Condition of Stock Yards.

T. J. Johnson, member of town board; J. L. Pierson, recorder of Union county, and Clinton Gardner, auditor of Union county, April 16, 1908, complained to the Commission of the unsanitary condition of the stock yards just across the railroad from the passenger depot at Liberty, Indiana. Matter taken up with J. M. Scott, superintendent of the C., H. & D. Ry., April 23, 1908, who agreed to put these pens in first-class condition from a sanitary standpoint, which was accordingly done, and the matter closed.

A. R. 485. Refusal to Absorb Switching Charges to Non-Competitive Points.

The Erie Stone Company, of Huntington, Indiana, inquired of the Commission whether a railroad on which a plant is located may absorb switching charges to points where they have competition, but decline to absorb the charges to points where there is no competition. The Commission responded as follows:

"Under the circumstances mentioned in your letter, we do not believe it would be unjust discrimination for the receiving lines to absorb the switching charges to competitive points and to refuse to absorb the same charges to points to which there is no competition. The Interstate Commerce Commission and the courts have ruled that under the circumstances you mention, this action does not constitute unjust discrimination."

A. R. 486. Lateral Clearances.

J. O. Crockett, general superintendent of E. & T. H. R. R., inquired of the Commission the rule with reference to the lateral clearances, calling the attention to the very indefinite provisions of the statute. The Commission responded that it fully appreciated the difficulties of the situation and stated also that under the recommendation made by the committee of the first Indiana railroad convention, this Commission had advised with the American Railway Association as to what uniform clearances would be advisable by that body. A copy of the letter of the Commission to the American Railway Association was enclosed.

A. R. 487. Failure to Furnish Cars.

Complaint of Marengo Mfg. Company, of Marengo, Indiana, that Southern Railway Company failed to furnish them cars. Commission had before it Mr. C. C. Coffee, superintendent, who explained that while he could not always furnish flat bottom cars, he could and would provide side drop, or drop bottom cars, and that he would furnish the same whenever applied for by complainant. Complainant was advised of Mr. Coffee's explanation and nothing further being heard from them, this matter was closed.

A. R. 488. Human Endurance Law.

Information reached the Commission that engines on the Louisville Division of the Pennsylvania Railroad leak so constantly that men were worked more than sixteen hours. Commission arranged conference between B. W. Taylor, superintendent and Commission, which took place, and during which time it was shown to the Commission that this company made every possible effort under the circumstances of water supply this year to keep its motive power in good shape, and to arrange it so that men would not be worked over time. The showing was satisfactory to the Commission and the matter was closed.

A. R. 489. Storage Charges in Southwestern Territory.

Complaint of American Pharmacal Company that storage charges were so great in the southwestern territory that they amounted in some cases to confiscation of small packages of goods.

Commission advised that it had no authority, and matter referred to Interstate Commerce Commission. That Commission responded by reference to case of Kehoe & Co. v. N., C. & St. L. Ry., I. C. C., decided November 10, 1908, holding that it is not the duty of carrier to telegraph shipper of shipment refused or consignor can not be found.

A. R. 491. Badly Located Signboard.

The Commission received information that a sign, maintained by the Cusack Sign Company, obstructed the view of motormen along the track of the Indianapolis, Crawfordsville & Western Traction Company. The matter was taken up with all parties interested, with the result that the sign was moved 200 feet from the right of way of the railroad. Closed.

APPENDIX IV.

Report of Inspections.

REPORT OF INSPECTION DEPARTMENT FOR YEAR 1908.

Of the Unfinished Work of 1907, the Following is a Statement as to the Present Status; also Statement of Inspections Made, Cases Corrected and Others Pending in 1908.

I. R. No.	RAILROAD.	SUBJECT.	LOCATION.	DISPOSITION.
3.....	C., H. & D.	Low highway bridge.....	Liberty.....	Corrected.
5.....	C., H. & D.	Low highway bridge.....	Russellville.....	Corrected.
6.....	C., H. & D.	Low highway bridge.....	West Milligan.....	Corrected.
7.....	C., H. & D.	Low highway bridge.....	East Guion.....	Corrected.
10.....	C., H. & D.	Insufficient depot.....	College Corner.....	Closed.
11.....	C., H. & D.	Insecure depot.....	Reedsville.....	Closed.
22.....	C., H. & D.	Highway crossings.....	Entire line.....	Closed.
23.....	C., H. & D.	Switch lights.....	Entire line.....	Closed.
25.....	C. H. & D.	Low highway bridge.....	New Palestine.....	Closed.
26.....	C., H. & D.	Low railroad bridge.....	Guion.....	Pending.
29.....	Cent. Indiana.....	Defective signal.....	Westfield.....	Corrected.
32.....	Cent. Indiana.....	Defective clearance.....	Anderson.....	Corrected.
33.....	Cent. Indiana.....	Coal shed clearance.....	Rosston.....	Corrected.
36.....	Cent. Indiana.....	Overhead obstructions.....	Noblesville.....	Closed.
38.....	Cent. Indiana.....	Lateral obstructions.....	Lapel.....	Corrected.
39.....	Cent. Indiana.....	Lateral obstructions.....	Lapel.....	Corrected.

REPORT OF INSPECTION DEPARTMENT FOR YEAR 1908—Continued

I. R. No.	RAILROAD.	SUBJECT.	LOCATION.	DISPOSITION.
41.....	Cent. Indiana.....	Lateral obstructions.....	Anderson.....	Corrected.
43.....	Cent. Indiana.....	Lateral obstructions.....	Anderson.....	Closed.
46.....	Cent. Indiana.....	Lateral obstructions.....	Anderson.....	Pending.
48.....	Cent. Indiana.....	Lateral obstructions.....	Muncie.....	Pending.
50.....	Cent. Indiana.....	No water barrels at bridges.....	Entire line.....	Corrected.
52.....	Cent. Indiana.....	Lateral obstructions.....	Gadsden.....	Corrected.

INTERURBAN RAILROAD CONVENTION.

Early in the year 1908 it was discovered that while a few of the interurban lines had adopted and were working under a very satisfactory code of rules, yet many of the lines were not doing so; in fact, some had no form of rules and were operating on verbal instructions.

The attention of the Commission was called to this fact in a communication from the chief inspector who recommended a conference of interurban officials with a view of compiling and adopting a standard code of rules. Acting upon this recommendation the Commission issued circular letter No. 19, on January 14th, which reads as follows:

CIRCULAR No. 19.

To all Traction or Interurban Railroad Companies:

It being the duty of the Railroad Commission "to keep informed as to the condition of railroads and railways, and the manner in which they are operated with reference to the security and accommodation of the public;" an inquiry and investigation is hereby instituted as to the rules for operating and despatching cars, and as to the qualifications of motormen and conductors, on the traction lines of this state.

The managers, superintendents and despatchers of said railways are, therefore, requested and directed to appear before the Commission at its Public Hearing Room, on Monday, February 10, 1908, at 10 o'clock a. m., for conference and information upon these subjects, and for the purpose of formulating and adopting uniform operating rules and practices, and for providing for the instruction of conductors and motormen in their rules and duties, and to take such other steps for the safe operation, and the prevention of accidents as may be agreed on or ordered.

BY ORDER OF THE COMMISSION,

CHAS. B. RILEY, Secretary.

The date of this conference was fixed for February 10, but was afterward changed to the 18th. The convention met at 10 o'clock on the morning of the 18th, and was called to order by Chairman Hunt, who explained the purpose of the convention as follows:

"Gentlemen—From reports made by our inspectors, resulting from inspections made and information gathered in other ways, there seems to be quite a variety of methods and systems in practice on the various electric lines in this state in regard to rules governing the movement of trains and for the control of employes in various departments—in other words, there appears to be a de-

plorable lack of uniformity. With the hope that these conditions might be improved, the Commission issued the following circular:

(The Chairman then read Circular No. 19, *supra*.)

“In requesting the attendance of the managers, superintendents and despatchers, for the purpose of considering the rules for the government of employes and the movement of trains, the Commission was not aware of the fact that it might be advisable to take in consideration some other matters, but at the present we will consider the subjects for which the meeting was called.

“It is not necessary to make a detailed statement of the various methods in vogue because the gentlemen here assembled are probably more conversant with these conditions than either the Commission or its inspectors. On some roads the rules and practices are so lax as to make opportunities for errors that might result disastrously.

“While traction lines are in their infancy, yet, with the experience that the officials have had in railroad operation, they should be able to formulate a much better system; the Commission can not formulate the system for you. It will not attempt to do so, but suggests that you call to this work your best talent and best thought and give to it such careful attention as will ultimately bring the desired results. Conventions have been called in other states and rules have been formulated and compiled. We have before us a copy of the rules adopted by the Central Railroad Association at Columbus, Ohio, September 6, 1907, which has been furnished by a line in this state which is now operating under these rules and as far as we have been able to determine they are the most satisfactory now in use. They are, however, far from complete, and our inspectors call attention to many places where they think they can be improved.

“Rule No. 152 says: ‘Train orders must be addressed to those who are to execute them, naming the place,’ etc., etc.

“We call attention to the fact that these rules specifically say that it must name the place, while the forms adopted for the train orders give everything in numbers, leaving room for doubt and opportunities for mistakes.

“Rule No. 144 provides: ‘That all trains must approach meeting points,’ and it occurs to us that it would be better should this rule read ‘passing points.’ A more complete examination of these rules will probably develop many other improvements that might be made.

“In addition to the defects mentioned this code of rules includes nothing in regard to the maintenance of way departments, which should be fully protected.

“The work of formulating rules will, much of it, necessarily have to be performed by committees to be appointed in a manner to be determined by you. But before this is done, I will ask our chief inspector, Mr. Shane, to give the conference the benefit of his views of the defects to be corrected and the best method of correcting them.

“In the discussion of all these matters, such as rules, car orders, qualification of motormen and conductors, and all other matters that may come up for consideration, I hope all the members of this conference will feel perfectly free to express themselves, for it is only by the full expression both from the railroad officials and the Commission that a proper and satisfactory understanding can be arrived at.”

On roll call the following gentlemen answered, stating the roads they represented:

S. A. Wood, Vice-President, Angola Ry. & Power Co.

Chas. G. Lohman, General Superintendent, C. S. B. & N. Ind. Ry. Co.

A. Benham, Assistant General Manager Ohio Electric Ry. Co.

C. H. Battin, Assistant General Manager, Evansville & Mt. Vernon Electric Ry. Co.

F. M. Durbin, General Manager, Evansville & So. Ind. Trac. Co.

Gus. Muhlhausen, General Manager, Evansville & Newburg Ry. Co.

C. H. Battin, General Manager, Evansville & Eastern Ry. Co.

C. T. Emmons, General Manager; R. T. Dunn, Superintendent Transportation; F. I. Hardy, Superintendent, Ft. Wayne & Wabash Valley Trac. Co.

A. A. Anderson, General Manager, Indianapolis, Columbus & Southern Traction Co. and Indianapolis & Louisville Traction Co.

Chas. L. Henry, President, Indianapolis & Cincinnati Traction Co.

A. H. Stockton, Acting General Manager, Indianapolis, Crawfordsville Traction Co.

H. A. Nichols, General Manager, Indiana Union Trac. Co.

A. J. Purinton, General Manager, Toledo & Chicago Interurban Railway Co.

H. F. Dickey, General Superintendent, Winona Interurban Ry. Co.

H. E. Marshall, Superintendent, Kokomo, Marion & Western Trac. Co.

F. E. Cole, General Superintendent, Louisville & Northern Ry. & Lighting Co., also Louisville & Southern Ind. Trac. Co.

C. W. Clark, Superintendent Transportation, Marion, Bluffton & Eastern Traction Co.

C. S. Witt, Chief Despatcher, Muncie & Portland Traction Co.

C. C. Reynolds, General Manager, Terre Haute, Indianapolis & Eastern Traction Co.

In addition to the above there were a great many present, employes of the above lines, subordinate officials, such as train masters, dispatchers, etc., whose names were not reported.

Considerable discussion followed evidencing a variety of opinions as to the mode of procedure that should be adopted, after which Mr. C. T. Emmons, general manager of the Ft. Wayne & Wabash Valley Traction Company, moved that a committee of five officials of interurban railways be appointed to act in concert with Inspectors Shane and Matthews, in compiling a code of rules for the operation of interurban railways, to be submitted to another conference to be called by the Commission, after the completion of their labors, for final adoption.

Mr. C. C. Reynolds, general manager of the Terre Haute, Indianapolis & Eastern Traction Company, then moved that a committee of five be appointed to act in co-operation with Chief Inspector Shane in compiling a code of rules for the maintenance of way departments. Both resolutions were unanimously carried.

At the afternoon session the committee appointed Mr. C. D. Emmons, Mr. H. A. Nichol, Mr. Fletcher Durbin, Chas. Lohman and Mr. C. C. Reynolds, together with Messrs. Shane and Matthews on committee to compile a code of rules for the operation of interurban lines and Mr. A. A. Anderson, Mr. F. B. McMath, J. J. Brennen, J. W. Moore, W. C. Sparks, together with A. Shane, as a committee for the purpose of compiling a code of rules for the maintenance of way department. These committees met at the Capitol building on Friday, February 28, 1908, at 1:30 p. m. Upon organization, C. D. Emmons was elected chairman of the committee on rules for operation. Mr. Fletcher C. Durbin, secretary of the committee, and Mr. A. A. Anderson, chairman of the committee of maintenance of the way department.

These committees had several meetings, and after completing their work a joint conference was called on March 25, 1908, when there was present on committee of train rules Messrs. Emmons, Reynolds, Durbin, Nichol, Shane and Moore, and on the maintenance of way committee, Messrs. Anderson, Sparks, Brennen, McMath, Moore, Shane and Matthews.

A. A. Anderson was chosen chairman of the joint committee, and H. A. Nichol secretary. It was then moved by C. D. Emmons, and seconded by Mr. McMath that the rules recommended by both committees be combined, thus forming one book of rules for the operation of the electric lines, which was carried.

It was then moved by C. C. Reynolds and seconded by Mr. McMath that a copy of the combined rules be submitted to the Ohio electric railways for their information, also that copies be sent to all the interurban railways of Indiana with a request that they carefully inspect the same and immediately forward any criticisms they may have to the chairman of the train rules committee, who would have in charge the matter of getting out and forwarding these copies to the railway companies, and after a reasonable time that the combined rules be referred to a general meeting attended by the officers of the various traction companies, said meeting to be called by the Indiana Railroad Commission.

This motion was adopted.

Mr. Shane, inspector for the Indiana Commission presented a form of crossing sign which he thought should be used by traction companies, especially where an electric road parallels a steam road, to have a horizontal board placed upon the same, under the usual cross, with letters upon it, reading, "Danger, Two Crossings." The letters of the word "danger" to be in red.

Upon motion of Emmons and seconded by Mr. Reynolds, the meeting adjourned.

In compliance with the resolutions, the secretary of the joint committee sent out a copy of the rules as compiled. Replies were received as follows:

FT. WAYNE, IND., May 27, 1908.

Mr. Chas. B. Riley, Secretary, Railroad Commission of Indiana, Indianapolis, Indiana:

Dear Sir—Referring to work of the Rule Committee which was appointed by the Railroad Commission at the meeting in February, beg to advise that this work has been completed, proof book of rules sent to all of the interurban roads of Indiana, and a total mileage of 1,169 out of a grand total of 1,538 have answered, signifying their approval, with some minor exceptions.

We will, therefore, be very pleased indeed if the Commission can see fit to call another conference of the representatives of the electric roads in Indiana early in June, for the purpose of taking definite action upon the rules.

Yours very truly,

C. D. EMMONS,
General Manager.

P. S. We would suggest calling this meeting at two in the afternoon, so that the representatives of the Indiana roads could conveniently reach Indianapolis, and for the further reason that in case of necessity we could have a meeting of the rule committee in the morning preceding this meeting.

On the same date the Commission was informed that the labors of this committee had been completed and Mr. Emmons' letter, recommending a second conference, was submitted, reading as follows:

To the Honorable Railroad Commission of Indiana:

Gentlemen—I hand you herewith a letter under date of May 27th from Mr. C. D. Emmons, chairman of the Joint Committee on Interurban Rules, together with my entire file upon this subject.

You will note that the labor of the two committees is completed and copies of the rules as compiled by the committee are in the hands of the managers of the different lines of the State, in order that they may look them over and offer such criticisms or suggest such changes as they may desire. When these rules were sent out a prompt reply was requested. Since that time they have been written and urged to hurry up their reply. Mr. Emmons in his of the 27th now suggests that the Commission call another conference for the final adoption of these rules and your inspector would respectfully recommend that they fix a date as early in June as convenient and issue a circular letter to all of the traction lines of the State inviting their representation and co-operation and urge that they reply to Mr. Emmons' circular letter in the meantime.

Respectfully submitted,

A. SHANE,
Chief Inspector.

Acting upon this recommendation the Commission issued circular 22 as follows:

CIRCULAR No. 22.

To All Traction or Interurban Railway Companies:

In compliance with circular No. 19 of January 14th, 1908, the managers, superintendents and despatchers of the several electric lines of the State met in conference at the State House, at Indianapolis, on February 10, 1908. At that conference two committees were appointed for the purpose of compiling a Code of Rules for the government of the employes and the operation of the traction roads.

The Commission is now informed that the labor of the committees is completed and it is requested to call a general conference of the managers and operating officials for the purpose of approving and adopting the Code of Rules as submitted by the committees.

I am, therefore, directed by the Commission to fix June the 4th, 1908, 2:00 p. m., for that conference, to be held at the rooms of the Commission, and you are invited and earnestly urged to attend. I am further directed to request that any and all companies that have received a copy of the rules from the chairman of the committee and not replied to his letter do so prior to the date of this conference.

By Order of the Commission.

CHAS. B. RILEY,
Secretary.

On May 29, the Commission sent out a second letter modifying Circular 22 and fixing June 5, at 2 p. m., for the general conference to approve the code of rules as recommended, which read as follows:

CIRCULAR No. 22 MODIFIED.

To All Traction or Interurban Railroad Companies:

You are advised that the conference provided for by our Circular No. 22, issued May 28th, has this day been reassigned for Friday, June 5th, 1908, at 2:00 p. m., at the rooms of the Commission.

By Order of the Commission.

CHAS. B. RILEY,
Secretary.

The conference met at the appointed time when Chairman Emons submitted the following report:

To the Honorable Members of the State Railroad Commission of Indiana and Conference of Representatives of Electric Railways:

We, the undersigned committee, which was appointed by your honorable body at the conference of representatives of interurban railways of the State of Indiana, held in the State House, Indianapolis, on February 18, 1908, for the purpose of formulating a set of rules for the operation of interurban railroads in the State of Indiana which would be satisfactory to the representatives of such interurban railroads and the Railroad Commission of the State of Indiana, having had various meetings from time to time, at all of which meetings the State Railroad Commission was very efficiently represented by their Chief Inspector, Mr. A. Shane, and Inspector D. E. Matthews, whose aid and counsel have been of great value to the committee, and having finally formulated a set of rules which appear to be satisfactory to the committee and to the representatives of the Commission, on May 2nd, 1908, forwarded to each interurban road of Indiana a proof copy of such rules as formulated.

The answers received from the various roads, with very few exceptions, were that they were unconditionally satisfied with the rules as presented. By correspondence and a personal meeting with the roads who had criticisms to any extent, such slight changes have been made in the rules as originally submitted by your committee as we believe make them satisfactory to these roads, and we feel confident will make them none the less satisfactory to the Commission and representatives of the other roads present.

The rules as thus revised are the ones handed to you today.

Of the total number of twenty-three different interurban railroads of the State, with a total mileage of 1,468, we have received answers from sixteen, with a total mileage of 1,279, or about eighty-eight per cent., all of whom, we believe, as stated above, with the slight changes which have been made, are satisfied with the rules in their present shape.

In the book as presented is included also a set of rules for track and roadway department and for maintenance of overhead line, as prepared by a committee with Mr. A. A. Anderson chairman.

It is also deemed advisable to include in the book copies of some of the principal sections of the criminal code of the State of Indiana which apply particularly to the operation of electric interurban railroads.

The committee has found the task which was set for them no easy one, and in making this report, while we feel that we are presenting a set of rules which are perfectly satisfactory for the operation of electric interurban railroads, yet we appreciate the fact that almost any set of rules are easily subject to criticism from a standpoint of arrangement, wording, rules which might be added, or some rules which might be included which could be eliminated.

We feel that the representatives of interurban railroads of Indiana have had ample opportunity to look over these rules to ascertain whether or not they are satisfactory, and that the formal vote taken thereon should be such as to insure their use almost without exception on the interurban roads of Indiana.

We, therefore, take pleasure in submitting the result of our labors to your honorable body, and this conference of representatives of the interurban railroads for your further consideration and action.

All of which is respectfully submitted.

Yours very truly,

C. D. EMMONS, Chairman.
 C. C. REYNOLDS,
 A. H. NICHOLL,
 FLETCHER M. DURBIN,

RULES AND REGULATIONS FOR THE GOVERNMENT OF EMPLOYEES OF TRACTION COMPANIES.

GENERAL NOTICE.

To enter or remain in the service is an assurance of willingness to obey the rules.

Obedience to the rules is essential to the safety of passengers and employes, and to the protection of property.

The service demands the faithful, intelligent and courteous discharge of duty.

To obtain promotion, capacity must be shown for greater responsibility. Employes, in accepting employment, assume its risks.

The rules herein set forth are for the government of the employes of the Company, have the approval of the Railroad Commission of the State of Indiana, and become effective superseding all previous rules and instructions where they conflict with the same.

Special instructions may be issued from time to time by proper authority.

(Name)

(Title)

GENERAL RULES.

Have Copy of Rules.

1. The head of each department must be conversant with these rules, supply copies of them to his subordinates, see that they are understood, enforce obedience to them, and report to the proper officer all violations thereof and the action taken thereon. Any employe whose duties are prescribed by these rules must have a copy of them at hand, while on duty. He must render all assistance in his power in carrying them out, and immediately report any infringement of the same to the head of his department.

Employes Must Promote Company's Welfare.

2. The reputation and success of this company depends greatly upon the care and promptness with which its business is conducted and the manner in which its patrons are treated by its employes.

Special Instructions and Rules Must Be Obeyed.

3. In addition to these rules, bulletin orders and time tables will be issued from time to time, containing such special instructions as necessity demands. These special instructions, when issued by proper authority, shall be fully observed while in effect, whether in conflict with these rules or not. Employes must be conversant with and obey the rules and special instructions. If in doubt as to their meaning, they must apply to the proper authority for an explanation. *Ignorance is no excuse for neglect of duty.*

Switch Keys.

4. will be the custodian of switch keys and will be held strictly responsible for their distribution, delivering them to such persons as are required to use them in the performance of their duty, and taking receipt therefor on forms provided for that purpose. Employees to whom switch keys have been delivered will be held responsible for their use and must report at once any loss of same. All employees must report at once in writing to their superior officer any misuse of a switch key, or any person having a switch key in his possession who is not so entitled, and it shall be the duty of such superior officer to see that any such switch key or keys are recovered and returned to A deposit of \$..... will be required to guarantee the return of switch keys, badges, and rule book and other property of the company upon leaving the service.

Importance of Enforcement of Rules.

5. It is imperative that all rules for the government of employees should be strictly enforced by the heads of departments, and obeyed by employees. If in the opinion of the heads of any department any existing rule should not be enforced, they should at once bring the matter to the attention of those in authority.

Discharged Employees.

6. When an employe is discharged from the company's service he shall not be re-employed without the approval of the general manager.

Employees Governed by Rules.

7. All persons authorized to transact business or engaged in performing any service at stations or on trains are subject to the rules governing the employees of the company.

Intoxicants.

8. The use of intoxicants while on duty is prohibited. Employees known to be addicted to their use at any time, or to frequent saloons or places of low resort, will not be retained in the service.

Tobacco.

9. The objectionable use of tobacco by employees when on duty in or about stations, passenger or freight cars, is prohibited. Smoking while thus on duty is absolutely prohibited.

Uniforms.

10. Employees on duty must wear the prescribed badge and uniform, and must be neat in appearance.

Bulletins.

11. Employees are required to be familiar with the rules and with every order issued. The bulletin boards must be examined daily for orders or instructions.

Current Time Tables.

12. Employes engaged in the movement of trains must provide themselves with a copy of the current time table and always have same with them when on duty. Copies for other employes will be furnished by the head of their department. When a new time table takes effect old issues must be destroyed at once.

Lost Articles.

13. An employe finding a lost article in the cars, stations or on the property of this company will forward same to the proper officer.

Packages.

14. Employes must not carry packages, letters, or newspapers, for anyone not having business with the company, without an order from the proper authority.

Authority at Barns.

15. All trainmen will be under the direction and control of the or his authorized agent when their cars are in or about the car house. Train crews must do all necessary switching in taking out cars or trains or when putting them into the houses or yards, and same must be done under the direction of the or his foreman. Trainmen must not leave their cars in houses or yards with the lights burning or with the trolley in contact with trolley wire.

Protect Company's Property.

16. In case of danger to the company's property, employes must unite to protect it.

Safety of Employes.

17. Each employe is expected and required to look after and be responsible for his own safety, as well as to exercise care to avoid injury to others.

Gambling.

18. All forms of gambling, including bets, raffles, etc., are forbidden upon premises or cars of the company.

Reading on Duty.

19. Reading newspapers, letters or other matter when on duty, except to consult orders, rules and time tables, is prohibited.

Employes Occupying Seats.

20. Employes, when passengers on a train, must not occupy seats to the exclusion of other passengers.

Report Whatever Affects Interests of Company.

21. Whenever it shall come to the knowledge of any official or employe of the company, by published notice or otherwise, that any work or improvement is proposed by any county, township, municipal or other authority, which in any way affects the company, all informa-

tion upon the subject must at once be sent to the superintendent, together with the notice, if any served, in the matter. It is important that the earliest information should be had of any intended improvements, etc., in order that the company's interests may be fully protected.

Anything which may affect the safe and proper operation of the railroad or the interests of the company in any way must be promptly reported.

Examinations.

22. All persons employed in any branch of the service involving the use of signals or the movement of cars or trains will be required to pass an examination by one of the authorized examiners of the company as to hearing, sight and ability to distinguish colors, and other required examinations.

Deportment.

23. The use of boisterous, profane, or vulgar language by employes around or on the premises of the company is strictly forbidden. Civil, gentlemanly and quiet deportment toward their fellow employes, as well as the patrons of the company, is required.

Resignation.

24. Employes on leaving the service of the company must sign receipt for their final pay, and return all the company's property with which they have been entrusted.

Assignment of Wages.

25. Assignment of wages by an employe is prohibited, and will be cause for dismissal. The attaching of an employe's wages by garnishment process or proceedings in aid of execution, will be considered sufficient cause for dismissal unless a satisfactory explanation is given.

Conduct Toward Public.

26. In all matters not fully covered by these rules and regulations, employes must bear in mind that they are engaged in a public service, in which they are constantly called upon to exercise great patience, forbearance and self-control. Politeness and courtesy continually practiced by employes will prevent controversy and complaint, and greatly benefit the service.

Laws of Indiana.

27. All laws of the State of Indiana governing common carriers and applicable to interurban operation must be observed. Extracts from important laws will be found in the back of this book.

DEFINITIONS.

Train.

28. A motor or more than one motor coupled with or without cars, displaying markers.

Scheduled Train.

29. A train represented on the time table. It may consist of sections.

Section.

30. One of two or more trains running on the same schedule displaying signals, or for which signals are displayed.

Extra Train.

31. A train not represented on the time table. It may be designated as:

Extra.—For any extra train except work extra.

Work Extra.—For work train extra.

Superior Train.

32. A train having precedence over other trains. A train may be made superior to another train by right or class.

Right is conferred by train order; Class by time table.

Right is superior to Class.

Train of Superior Right.

33. A train given precedence by train order.

Train of Superior Class.

34. A train given precedence by time table.

Time Table.

35. The authority for the movement of scheduled trains subject to the rules. It contains the classified schedules of trains with special instructions relating thereto.

Schedule.

36. That part of a time table which prescribes the class, direction, number and movement of a scheduled train.

Main Track.

37. A principal track upon which trains are operated by time table, train orders, or block signals.

Single Track.

38. A main track upon which trains are operated in both directions.

Double Track.

39. Two main tracks, upon one of which the current of traffic is in a specified direction and upon the other in the opposite direction.

Current of Traffic.

40. The direction in which trains will move on a main track, under the rules.

Station.

41. A place designated on the time table by name or number, at which a train may stop for traffic; or to enter or leave the main track; or from which fixed signals are operated.

Siding.

42. A track auxiliary to a main track for meeting or passing trains.

Meeting Point.

43. A place where opposing trains, i.e., trains moving in opposite directions, meet by schedule or train order.

Passing Point.

44. A place where trains moving in the same direction pass by schedule or train order.

Fixed Signal.

45. A signal of fixed location, indicating a condition affecting the movement of a train.

"Fixed signals" cover such signals as whistle boards, slow boards, stop boards, yard limits, switches, blocks, semaphores, or other means for indicating whistle, stop, caution, or proceed.

Yard.

46. A system of tracks within defined limits provided for the making up of trains, storing cars, and other purposes, over which movements not authorized by time table or by train order may be made, subject to prescribed signals and regulations.

Yard Motor.

47. A motor or motors consigned to yard service and working within yard limits.

Pilot.

48. A person assigned to a train when the motorman or conductor, or both, are not fully acquainted with the physical characteristics, or running rules of a road, or portion of a road over which the train is to be moved. The responsibility of a pilot is the same as that of a motorman or a conductor.

Automatic Block System.

49. A block system in which the signals are operated by electric, pneumatic or other agency actuated by a train, or by certain conditions affecting the use of a block.

Home Signal.

50. A fixed signal controlling the entrance to a block or governing movements over switches at interlockings.

Distant Signal.

51. A fixed signal used in connection with home signals to regulate the approach to the home signal.

Advance Signal.

52. A fixed signal placed in advance of the home signal or switches at an interlocking to control the entrance to the block ahead.

Dwarf Signal.

53. A low fixed signal with small semaphore arm.

Post Signal.

54. A revolving fixed signal

STANDARD TIME.

Standard Time.

55. 90th Meridian or Central Standard Time is the standard time of this company.

Reliable Watches.

56. Watches that have been examined and certified to by a designated inspector must be used by dispatchers, station masters, conductors, motormen, flagmen, yardmen, section foremen, and line foremen.

Form of Certificate.

57. (Name) Company
This is to certify that on 19....
the watch of
employed as
was examined by me.

It is correct and reliable, and in my judgment will, with proper care, run within a variation of thirty seconds per week.

Name of maker Brand.....
No. of movement Metal of case.....
Stem or key wind
Open or hunting case
Old or new
If rejected, state reasons

Signed

Watch Inspector.

Address.....

Comparing Time and Registering.

58. Motormen and conductors must call for and receive Standard time from the train dispatcher before taking their runs and must compare their watches before starting on each portion of their day's run, with each other, and register their names, the time at which they compared their watches, and note any variation on the daily registration sheet.

Variation Allowed.

59. If the variation be in excess of thirty (30) seconds per week, they must report the fact immediately to the superintendent.

Standard Clocks.

60. The clock in the dispatcher's office, at.....
and such others as may be hereafter designated, are standard clocks.

Station Clocks.

61. When station clocks are provided, station agents must see that they show correct time; but trainmen must not take time from such clocks unless they are designated as standard clocks.

TIME TABLES.

Receipt of Time Tables.

62. Copies of time tables will be furnished to trainmen, yard and road masters, and all others concerned. Receipt of same must be acknowledged to the superintendent on the prescribed form before the time table takes effect. These receipts will be filed in the superintendent's office. Proposed change of time table will be bulletined at least twenty-four (24) hours in advance.

Supersedure of Time Tables.

63. Each time table, from the moment it takes effect, supersedes the preceding time table and all special instructions relating thereto, or conflicting therewith and trains shall be run as directed thereby subject to the rules.

Forfeiture of Right and Class.

64. A train of the preceding time table thereupon loses both right and class, and can thereafter proceed only by train order.

Arriving and Leaving Times.

65. Not more than two times are given for a train at any station; where one is given, it is, unless otherwise indicated, the leaving time; where two, they are the arriving and leaving times.

Where Time Applies.

66. Unless otherwise indicated, the time applies to the siding; where there is no siding, it applies to the place from which fixed signals are operated; where there is neither siding nor fixed signals, it applies to the place where traffic is received or discharged.

Scheduled Meeting Points.

67. Scheduled meeting or passing points are indicated by figures in full-faced type; the number or numbers of trains they are to meet or pass are shown in small type above or below the full-faced type.

Indication of Meeting and Passing Times.

68. Both the arriving and leaving times of a train are in full-faced type when both are meeting or passing times or when one or more trains are to meet or pass between those times.

Stops Not Indicated.

69. On the employes' time table, the figures given at intermediate stations shall not be taken as indicating that trains will stop, unless the rules require it.

Designation of Trains.

70. Trains are designated by numbers and their class is indicated on the time table.

SIGNAL RULES.

Who Must Have Signals.

71. Employes whose duties may require them to give signals, must provide themselves with the proper appliances, keep them in good order, and ready for immediate use.

Flags and Lamps.

72. Flags of the prescribed color must be used by day, and lamps of the prescribed color by night.

Night Signals.

73. Night signals are to be displayed from sunset to sunrise. When weather or other conditions obscure day signals, night signals must be used in addition.

VISIBLE SIGNALS.

Color Signals.

74.

*Color.**Indication.*

- | | |
|-------------|---|
| (a) Red. | Danger. Stop. |
| (b) Yellow. | Caution. Proceed under perfect control, and for other uses prescribed by the rules. |
| (c) Green. | Safety. Proceed, and for other uses prescribed by the rules. |
| (d) Blue. | See Rule 97. |

Fusee.

75. A fusee on or near the track burning red must not be passed until burned out, and train must then proceed with caution until assured that track is clear.

Hand, Flag and Lamp Signals.

76.

*Manner of Using.**Indication.*

- | | |
|---|---------------------|
| (a) Swung across the track. | Stop. |
| (b) Raised and lowered vertically. | Go ahead. |
| (c) Swung vertically in a circle across the track when the train is standing. | Back. |
| (d) Swung vertically in a circle at arm's length across the track, when the train is running. | Train has parted. |
| (e) Swung horizontally in a circle, when the train is standing. | Apply air brakes. |
| (f) Held at arm's length above the head when train is standing. | Release air brakes. |

Violent Signals.

77. Any object waved violently by anyone on or near the tracks signifies danger. Motormen must bring their train under full control and proceed at slow speed until they are sure the track is clear and that it is safe to proceed.

AUDIBLE SIGNALS.

Whistle Signals.

78. Air whistle signals must always be given at places and under the circumstances indicated below. When the blowing of the whistle is forbidden by law, ordinance or rule, the sounding of the gong must be substituted.

<i>Sound.</i>	<i>Indication.</i>
(a) One short.	Stop. Apply brakes.
(b) Two long.	Release brakes. Start.
(c) One long and three short.	Flagman go back and protect rear of train.
(d) Four long.	Flagman return from the west or south.
(e) Five long.	Flagman return from the east or north.
(f) Three long.	When running, train parted; to be repeated until answered by the signal prescribed by Rule 76 (d).
(g) Two short.	Answer to any signal not otherwise provided for.
(h) Three short.	When train is standing, back.
(i) Four short.	Call for signals.
(j) One long and two short.	To call attention of opposing trains, section men, bridge men, and others interested, to signals displayed for a following section.
	To be answered by—
(k) Two short and one long.	Answer to signal of train displaying signals for a following section.
(l) Two long and two short.	Approaching public road crossings and at all road crossings whistle signals.
(m) One long.	Approaching stations, junctions, railroad crossings at grade, and dangerous or obstructed curves.

Alarm.

79. A succession of short blasts of the whistle is an alarm for persons or cattle on the track, and calls the attention of trainmen to danger ahead.

Torpedo Signals.

80. The explosion of one torpedo is a signal to stop; the explosion of two torpedoes not more than two hundred (200) feet apart is a signal to reduce speed and look out for danger or a danger signal.

Accident on Railroad Crossing.

81. In case of accident on a steam road crossing, the conductor and motorman must both attend to protecting their car, by one going in each direction at least three-quarters of a mile on the steam road tracks and placing two torpedoes, one on each rail immediately opposite

each other. Any responsible employe or other person may take the place of the motorman in flagging, in order that he may attend to getting his car off of the crossing. When car is clear of crossing the flagmen may be recalled by whistle signal as provided in Rule 78, but the flagmen must remain at their posts and signal any approaching train to stop until recalled by whistle signal, using a red flag by day and red fusee at night, in addition to their lanterns. It is the duty of the conductor to first notify his passengers to leave the car.

Bell or Whistle Cord Signals.

82.

CONDUCTOR TO MOTORMAN.

Sound.

Indication.

- | | |
|---|--|
| (a) One bell or whistle cord signal. | When train is running, stop at next station. |
| (b) Two bells, or whistle cord signals. | When train is standing, start forward. |
| (c) Three bells, or whistle cord signals. | When train is standing, back the train. |
| (d) Three bells, or whistle cord signals. | When train is running, stop at once, emergency. |
| (e) Four bells, or whistle cord signals. | When train is running, reduce speed to four (4) miles per hour until two (2) taps of the bell or two whistle cord signals are given, when the train will proceed at scheduled speed. |

MOTORMAN TO CONDUCTOR.

83.

- | | |
|------------------|---|
| (a) One bell. | Come forward. |
| (b) Two bells. | Watch trolley. |
| (c) Three bells. | By motorman is signal to conductor that he wishes to back train and must be answered by conductor before train is backed. |
| (d) Four bells. | Set rear brakes. |
| (e) Five bells. | Pull trolley down to roof. |

Sound Gong.

84. The gong or whistle must in all cases be sounded before the train is put in motion and also when approaching and crossing streets of towns or cities.

Starting Signals.

85. Motormen must not start their trains without first receiving proper signal from the conductor and never start without the signal being correct.

Answer Signals.

86. The motorman should always answer the conductor's signal to stop or to go forward or to back the train, either using the foot gong or the whistle in answering the signal.

TRAIN SIGNALS.

Headlights.

87. Headlights will be displayed on the front of every train at night. A headlight displayed on a train standing at a siding, either on main track or sidetrack, will be regarded as a danger signal by opposing trains.

Headlights Out of Order.

88. When a headlight is out of order and will not light, and another cannot be procured, a white light must be displayed in the place of the headlight.

Yard Motor Lights.

89. Yard motors will display the headlight on the front and rear by night. When not provided with a headlight at the rear, two white lights must be displayed. Yard motors will not display markers.

Rear End Signals.

90. Two green flags by day and two or more red lights at night will be displayed on the rear of every train.

Signals for Sections.

91. Two green flags by day or two green lights by night, displayed on the front end of a train, denote that the train is being followed by another running on the same schedule and entitled to the same schedule rights as the train carrying the signals.

All Sections Except Last Display Signals.

92. All sections of a train, except the last, will display two green flags by day or two green lights at night, on the front of the train in places provided for that purpose.

Signals for Extra Trains.

93. All extra trains will display two white flags by day or two white lights at night on the front of the train in places provided for that purpose.

Leading Motor Displays Signals.

94. When two or more motors are coupled, the leading motor only shall display signals as prescribed by Rules 91, 92 and 93.

Proper Signals Required.

95. One flag or light displayed where, in Rules 90, 91, 92 and 93, two are prescribed, will indicate the same as two; but the proper display of all train signals is required.

Cars Being Pushed.

96. When cars are pushed by motor (except when shifting or making up trains in yards), a white light must be displayed on the front of the leading car by night.

Car Repairmen's Signals.

97. A blue flag by day and a blue light by night, displayed at one or both ends of a car or train, indicate that workmen are under or about it. When thus protected it must not be coupled or moved. Workmen, before placing themselves in a dangerous position in or about a car or train, must display a blue signal, and the same workmen are alone authorized to remove such signals.

FIXED SIGNALS.

Location of Fixed Signals.

98. Fixed signals are placed at drawbridges, railroad crossings, junctions, stations and at other points, as required.

SEMAPHORE SIGNALS.

Location of Semaphore Signals at Interlocking Towers.

99. Semaphore signals such as at interlocking towers, except train order signals, will be supported on a separate mast for each track. So far as practicable, they will be placed either over or upon the right of and adjoining the track to which they refer and in the same order, whether supported by a signal bridge over the tracks, by putting a bracket and two or more masts on one post, or by using separate masts from the ground.

If there be more than one arm on a mast, the upper will govern the main line, or fast-running route; the second arm will govern the diverging or slow speed route.

Indications of Semaphore Signals.

100. The governing arm is displayed to the right of the signal mast, as seen from an approaching train, and the indications are given by positions.

(a) An arm with square end, in a horizontal position, indicates *Stop*.

(b) An arm with forked end, in a horizontal position, indicates *Caution*—proceed under control.

(c) An arm inclined at an angle of 60 degrees or more below the horizontal indicates *Proceed*.

(d) At night, the indication of signals will, in addition, be shown by colored lights:

Red—*Stop*.

Yellow—*Caution*.

Green—*Proceed*.

Dwarf Signals.

101. Dwarf semaphore signals govern the slow movements only, the indications being the same as for the high signals.

Train Order Signals.

102. Semaphore signals used for train orders may be located at telephone stations. The arms have square ends, and are attached to the same mast for trains in both directions.

USE OF SIGNALS.**Imperfect Signals.**

103. A signal imperfectly displayed, or the absence of a signal at a place where a signal is usually shown, must be regarded as a stop signal, and the fact reported to the superintendent.

Flag Station Signals.

104. The combined green and white signal is to be used only to stop a train at flag stations where station agents are employed. When it is necessary to stop a train at a point that is not a stopping point for that train, a red signal must be used.

Answer Signals.

105. When a signal (except a fixed signal) is given to stop a train, it must be acknowledged by two (2) short blasts of the whistle.

Signals for Following Section Must Be Observed.

106. Failure to answer a signal from trains carrying green signals must be understood to indicate that signals displayed have not been observed, and the train must be stopped, and not proceed until certain that signals are observed and understood.

Signals at Switches.

107. After a regular scheduled train clears the main track, and switches are properly set for main track, the conductor must step to the side of the track opposite the switch stand until after the opposing train has passed, keeping his hand lantern at night in full view of the approaching train.

Whistle at Road Crossings.

108. The regular road crossing whistle signal must be sounded on approaching all public road crossings (see sec. 673 of State Law, page 90) and at all road crossings whistle posts.

Unnecessary Use of Whistle or Gong.

109. The unnecessary use of either whistle or foot gong is prohibited. They will be used as prescribed by rule of law or to prevent accident.

Watchmen at Road Crossings.

110. Watchmen stationed at public road and street crossings must use red signals only when necessary to stop trains.

CLASSIFICATION OF TRAINS.

Scheduled Trains.

111. Scheduled trains in either direction have no superior rights over trains of the same class in opposite direction, but will meet trains as per time table, unless otherwise ordered by the superintendent or other designated authority.

All regular trains are classified on the time table with regard to their priority of right to the track; trains of the first class being superior to those of the second and all succeeding classes, and so on indefinitely.

Extra Trains.

112. Extra trains are of inferior class to all scheduled trains of whatever class, and have no rights except those conferred upon them by train order.

MOVEMENT OF TRAINS.

Trains Leaving Initial Station.

113. A train must not leave its initial station on any division, or a junction, or pass from double to single track, without orders or clearance, and until it has ascertained whether all trains due have arrived or departed. If in such case the motorman or conductor cannot reach the dispatcher, the train will proceed on time table rights, then call from all succeeding telephone stations until he has succeeded in reaching the dispatcher.

Trains Leaving Station or Siding.

114. No train must leave a station or siding before the time set for it, nor without proper signal from the conductor.

Trains of Inferior Class.

115. A train of inferior class must in all cases keep out of the way of trains of a superior class, and must clear the time of scheduled trains five minutes unless a meeting or passing order has been given.

Scheduled Trains Have Equal Rights to Meeting Points.

116. All scheduled trains of the same class, or sections of scheduled trains, have equal rights to scheduled meeting points.

Set Switches for Opposing Trains.

117. At meeting points between trains either by schedule or train order, should the train that is to occupy the main track arrive first, it will be the duty of the conductor of such train to promptly set the switch for the siding, so that the train to be met can take the siding with the least possible delay.

Extra Trains—Clearing Time of Regular Trains.

118. All extra trains must keep out of the way of regular scheduled trains and clear their time at least five minutes, unless they have been given a meeting or passing order, or other order relieving them from this necessity.

Distance Required Between Following Trains.

119. Trains running in the same direction must keep not less than two thousand (2,000) feet apart (20 poles), except in closing up at stations or meeting points. When on city tracks a distance of one hundred (100) feet must be maintained between trains moving in the same direction. When the view is obscured by curves, fog, storms or other cause they must be kept under such control that they may be stopped within the range of vision.

Signals for Sections to be Authorized.

120. A train must not display signals for a following section, nor an extra train be run without orders from the superintendent, except as provided for in Rules 121 and 122.

Defective Telephone.

121. When unable to reach despatcher on account of defective telephone, all extra trains will immediately lose their rights as extra trains and will become sections of regular scheduled trains as provided in Rule 122.

Arrangements for Sections When Telephone Defective.

122. When telephone line is out of order, any scheduled train, when requested by conductor of any train, may carry signals for such, as a section following, without first obtaining orders from the superintendent. Scheduled trains, after such arrangements, will immediately display signals, and extra trains must not follow the regular train until it is certain that signals are so displayed.

Taking Down Signals for Following Section.

123. When signals displayed for a section are taken down at any point before that section arrives, the conductor will notify all opposing trains of the same or inferior class leaving such point that the section for which the signals are displayed has not arrived. If impossible for the conductor to notify the opposing trains as provided herein, then the train displaying the signals shall await the arrival of the section for which signals are displayed before taking such signals down, unless relieved from such duty by order of the superintendent.

Instructions in Writing.

124. Messages or instructions respecting the movement of train or the condition of track or bridges must be in writing.

Working Limits—Extra Trains.

125. Where extra trains are assigned working limits, such trains must move within these limits with the current of traffic unless train orders otherwise direct.

Places to Approach Under Control.

126. Trains must approach the end of double track, junctions, railroad crossings at grade, and all drawbridges, prepared to stop, unless the switches and signals are right and the track is clear. Where required by law trains must stop.

Trains Not to Stop at Obscured Points.

127. If possible to avoid it, a train must not be allowed to stand on or be obscured by a curve between stations.

Protect Train When Stopped.

128. When a train stops or is delayed under circumstances under which it may be overtaken by another train, the *conductor or flagman must go back immediately with red signals a sufficient distance to insure full protection*. When recalled he may return to his train, first placing two torpedoes on the rail when the conditions require it. The front of a train must be protected in the same way when necessary by the motorman. The duty herein required of the conductor or motorman may be performed by the other where desirable for any reason.

Pushing Cars.

129. When cars are pushed by a motor (except when shifting and making up trains in yards) the conductor or flagman must take a conspicuous position on front of leading car and signal the motorman in case of need.

Yard Limits.

130. Yard limits marked by proper boards may be established, and within such limits trains will run according to special instructions.

Responsibility for Switches.

131. Switches must be left in proper position after having been used. Conductors are responsible for the position of switches used by them and their trainmen, except where switch tenders are stationed.

Setting Switches for Following Trains.

132. A switch must not be left open for a following train unless in charge of a trainman of such train.

Responsibility for Safety of Trains.

133. Both motorman and conductor are responsible for the safety of their train and the proper fulfillment of all running orders received by them, either from operators or direct from the dispatcher, governing the operation of their train, and under conditions not provided for by the rules must take every precaution for their protection.

Crossing Other Railroads at Grade.

134. Every train must be brought to a full stop before crossing the tracks of any railroad at grade at a distance of not less than fifty (50) feet from the railroad track, except when such crossing is provided with interlocking apparatus, or other system of signals which has the approval of the Railroad Commission of the State of Indiana; and must not proceed until proper signal is received from the conductor, and crossing is seen to be clear and no train approaching and about to pass over the crossing. Conductor must have in front vestibule for immediate use in case of necessity, a red flag by day and a red light by night. This order strictly prohibits the motorman from taking

a signal or order from anyone else but his own conductor, and conductors must not permit anyone else to perform their duties at these crossings unless authority has been conferred upon another employe by the superintendent.

Entering or Leaving Siding.

135. A train about to enter or leave a siding must approach the switch under full control.

Trains Meeting at Double End Sidings.

136. A train meeting another train at a siding open at both ends must enter at the nearest end and under no circumstances run by and back in without special orders from the superintendent.

Running Over Tongue Switches.

137. Tongue switches, wherever located, must be approached with train under full control and must not be run over or through unless the tongue is known to be properly set. Motormen and conductors will be held equally responsible for the proper setting of switches used by them, and they must take every precaution for the protection of their trains, even if not provided by the rules.

Delayed Trains.

138. Whenever a train cannot reach a scheduled meeting point well within the time limit prescribed by rule or time table, it will stop at the nearest siding or telephone box, when the motorman or conductor will call up the dispatcher, giving his train number, name and location, and ask for orders.

Rights of Delayed Trains.

139. A train which is delayed and falls back on the time of another train of the same class, does not thereby lose its rights.

Care Passing Other Cars at Stations.

140. Every care must be taken by trainmen in passing a station where any train is taking on or letting off passengers. Both motorman and conductor are responsible for the safety of their train and passengers, and must use every precaution at all times.

Approaching Meeting Points.

141. All trains must approach meeting or passing points under full control, cutting off power at least one thousand (1,000) feet from the siding at which the trains are to meet or pass, and must not attempt to pass until switches and signals are seen to be right and the train to be met or passed is clear of the main track.

Trains Unable to Keep Off of Time of Following Trains.

142. A train unable to keep off of the time or out of the way of a following train of the same class, which is running on a faster schedule, must report to the train dispatcher for orders.

Cases of Doubt.

143. *In all cases of doubt or uncertainty, take the safe course and run no risks.*

TRAIN ORDERS.

Train Orders.

144. For movements of trains not provided for by time table, train orders will be issued by authority and over the signature of the superintendent or other designated authority. Train orders must contain neither information nor instructions not essential to such movements.

Must Be in Writing.

145. Train orders must be brief and clear, and in the prescribed form, when applicable, without erasure, alteration or interlineation, and must be reduced to writing.

Must Be Same Words.

146. Each train order given for the control of two or more trains as to any matter must be addressed to the different trains and given to each in exactly the same words.

Number Consecutively.

147. Train orders will be numbered consecutively each day, beginning with No. 1 at midnight.

How Addressed.

148. Train orders must be addressed to those who are to execute them, designating the place at which each is to receive his copy. They must be addressed to the conductor and motorman, and also to anyone who acts as pilot. A copy for each person addressed must be supplied by the person taking the order.

Dispatcher's Record of Orders.

149. Each train order must be written in full by the dispatcher in a book or record provided for the purpose, before or at the time of giving the order to the train crews. With it must be recorded the names of those who have signed for the order, the time and from what station the order was repeated, and the train dispatcher's initials, underscoring each word and number as repeated. These records must be made at once, and never from memory or memoranda.

Designation of Trains.

150. Scheduled trains will be designated in train orders by their numbers, as "No. 10" or "2nd No. 10," adding car numbers; extra trains by car numbers, as "Extra 798," with the direction as "East" or "West."

How to Obtain Orders.

151. To obtain orders at telephone stations, the motorman or conductor, whichever is most convenient, will call the dispatcher, who will give such orders as are necessary, whereupon he will write the same plainly and without abbreviation, on the blank, with carbon copies provided for that purpose, and when he has finished writing the order he will repeat it to the train dispatcher, who will "Complete" same if correct. He will thereupon sign his name upon the order. The dis-

dispatcher will then complete the order by giving the initials of the superintendent or other designated authority, and the time of completion, which initials and time shall be promptly written on the order. who has not taken the order will then read it aloud and sign his name to the order, after which it will be in full force and effect. The one who has not taken the order will then read it aloud and sign his name to it, taking one copy for his use until the order is fulfilled. If, for any reason, the line should fail before the dispatcher completes the order, it is of no effect and must then be treated as if it had not been given.

151b. If desired to have both motorman and conductor "Complete" the order the train dispatcher will signify "O. K." instead of "Complete" after the first reading. The one taking the order will indicate such "O. K." upon the order by signing his name to it.

The one who has not taken the order will then repeat the train order, without abbreviation, to the dispatcher, who will then complete the order by giving the initials of the superintendent or other designated authority, and the time of completion, which initials and time shall be promptly written on the order. When the order has been properly completed he will then sign his name to the order, after which the order will be in full force and effect. If, for any reason, the line should fail before the dispatcher completes the order, it is of no effect and must then be treated as if it had not been given.

Issuing Orders at Stations.

152. To issue orders at stations where there are operators or agents, the dispatcher will instruct the agent or operator to display a stop signal for the motorman and conductor to call for orders. The motorman and conductor must not pass a station where such signals are displayed without reporting to the train dispatcher, and until such signals have been taken down, removed or cleared.

When in Doubt Ask Dispatcher.

153. If the agent or one or both of the crew, or any of them, do not understand the order or have any doubt concerning its meaning, the dispatcher shall be notified. In no case shall any of them attempt to influence the decision of the others as to the meaning of an order.

Stay on Siding Until Orders Are Received.

154. In no case shall a train leave a siding and run out onto the main track without complete orders when same are necessary.

Call Dispatcher if Opposing Train Has Not Arrived.

155. When any train reaches a meeting point and finds that the train or trains to be met have not arrived, the motorman or conductor shall immediately call the dispatcher for orders, as provided in Rule No. 151.

Manifold Copies of Train Orders.

156. The person receiving a train order must write it in manifold during transmission, and if they cannot at one writing make the requisite number of copies, must trace others from one of the copies first made.

Exchange and Explain Orders When Changing Off.

157. In case motormen or conductors change off before the completion of their trip, they must carefully exchange all orders they may have, and each must know that his orders are perfectly understood by the other. Changes of this kind, however, must never be made without permission from the superintendent, unless regularly provided for in the assignment of runs.

Train Orders Delivered by Dispatcher.

158. For train orders delivered by the train dispatcher in person the requirements as to the record and delivery are the same as at other offices.

Sections Included in Train Order.

159. When a train is named in a train order, all its sections are included unless particular sections are specified, and each section included must have copies addressed and delivered to it.

Be Sure Specified Train Is Being Passed.

160. Trainmen must know before meeting or passing trains against which they have orders, that the train met or passed is the one specified in the order.

Train Orders in Effect.

161. Train orders once in effect continue so until fulfilled, superseded or annulled.

Rights to be Restricted First.

162. When trains running in opposite directions are to be moved toward each other by train orders, the train whose rights are to be restricted must first receive the order and the complete before the order is given to the train to be moved against it or toward it.

Time of Trains to be Reported.

163. Agents or operators when so directed will promptly record and report to the train dispatcher the time of departure of all trains and the direction of extra trains. Agents and operators in such cases must have the proper appliances for signaling for immediate use, if required.

Use of Telephone for Train Orders Has Precedence.

164. Trainmen wanting the telephone line to get the dispatcher for train orders must be given precedence. Any other use of the line for conversation must be stopped immediately when it is necessary to ask for train orders.

How to Use Telephone.

165. When desiring to use the telephone, first put the receiver to your ear and listen to find out if others are using the line. If the line is not occupied it may be used, under proper restriction for company business only.

Meeting Orders Not to be Given at Meeting Point.

166. Meeting orders must not be sent for delivery to trains at the meeting point if it can be avoided. When it cannot be avoided, special precaution must be taken by the train dispatcher and operators to insure safety. There should be, if possible, at least one siding between the points at which opposing trains receive meeting orders.

Trains Governed Strictly by Orders.

167. A train, or any section of a train, must be governed strictly by the terms of orders addressed to it and must not assume rights not conferred by such order. In all other respects it must be governed by the train rules and time table.

Second Sections Must Have Orders.

168. Trains running as sections of any train must report when the opposing train is to be met at a point other than the scheduled meeting point or at a meeting point made by order, and must not attempt to follow preceding section without an order from the dispatcher to do so.

169.

.....

MOTORMAN	CONDUCTOR	TRAIN NO.	COMPLETE	TIME

Signs and Abbreviations.

170. The following signs and abbreviations may be used:

C&M—for conductor and motorman.

O K—as provided in these rules.

Min—for minutes.

Junc—for junction.

Frt—for freight.

No—for number.

Eng—for engine.

Sec—for section.

Opr—for operator.

9—to clear the line for train orders and for motorman and conductors to ask for train orders.

The usual abbreviations for the names of the months.

FORMS OF TRAIN ORDERS.

Form A.—Fixing Meeting Point for Opposing Trains.

171. Train No..... Car No..... and Train No.....
Car No..... will meet at.....

EXAMPLES.

Train No. 1, Car 201, and Train No. 2, Car 202, will meet at Siding 51.

Train No. 3, Car 203, and 2nd No. 4, Car 204, will meet at Siding 54.

Train No. 5, Car 205, and Extra East, Car 95, will meet at Siding 55.

Extra Car 652 North and Extra Car 231 South will meet at Siding 62.

Trains receiving this order will, with respect to each other, run to the designated point and having arrived there, will meet in the manner provided by the rules.

Form B.—Authorizing a Train to Run Ahead of or Pass Another Train Running in the Same Direction.

172. (1) Train No..... Car..... will pass Train No.
..... Car..... at
(2) Train No..... Car..... will run ahead of train No.
..... Car..... from..... to.....

EXAMPLES.

(1) Train No. 1, Car 201, will pass Train No. 3, Car 203, at Siding 9.

(2) Train No. 4, Car 204, will run ahead of Train No. 6, Car 206, from Siding 9 to Siding 15.

When under this order a train is to pass another, both trains will run according to rule to the designated point and there arrange for the rear train to pass promptly.

Form C.—Time Orders.

173. (1) Train No..... Car will run.....
late from to.....
(2) Train No..... Car..... will wait at
until for train No..... Car.....

EXAMPLES.

- (1) Train No. 1, Car 201, will run 20 minutes late from Siding 2 to Siding 15.
- (2) Train No. 1, Car 201, will wait at Siding 15 until 10 a. m. for train No. 2, Car 202.

Form (1) makes the schedule time of the train named between the points mentioned, as much later as the time stated in the order, and any other train receiving the order is required to run with respect to this later time, the same as before required to run with respect to the regular schedule time. The time in the order should be such as can be easily added to the schedule time.

Under Form (2) the train of superior right must not pass the designated point before the time given, unless the other train has arrived. The train of inferior right is required to run with respect to the time specified, the same as before required to run with respect to the regular schedule time of the train of superior right.

Form D.—For Sections of Regular Trains.

174. Train No..... Car No..... will display signals
..... to for Car No.....

EXAMPLES.

(1) Train No. 1, Car. No. 201, will display signals Siding 10 to Siding 15 for Car No. 51.

(2) 2nd No. 1, Car 51, will display signals Siding 15 to Siding 20 for Car 20.

This may be modified as follows:

(3) Car 201, Car 51 and Car 20 will run as 1st, 2nd and 3rd sections of Train No. 1 from Siding 10 to Siding 20.

To annul a section:

(4) Car 51 is annulled as 3rd section of Train No. 1, Siding 10 to Siding 15.

If there are other sections following add:

(5) Following sections will change numbers accordingly.

The character of train for which signals are carried may be stated. Each section affected by the order must have copies, and must arrange signals accordingly.

Form E.—For Arranging a Schedule for an Extra Train.

175. Car..... will run extra, leaving on
on the following schedule, and will have right of track over all trains

Leave.....
Leave.....
Arrive.....

EXAMPLES.

Car 402 will run extra, leaving Turin on Thursday, February 17th, on the following schedule, and will have the right of track over all trains:

Leave Turin 11:30 P. M.

Leave Pekin 12:25 A. M.

Leave Canton 1:47 A. M.

Arrive Rome 2:22 A. M.

The order may be varied by specifying particular trains over which the extra shall or shall not have right of track, and any train over which the extra is thus given the right of track must clear its time as many minutes as such train is required to clear the schedule time of a first-class train.

Form F.—Extra Trains.

176. Car No. will run extra from to

EXAMPLES.

(1) Car No. 402 will run extra from Berber to Gaza.

A train receiving an order to run extra is not required to guard against opposing extras unless directed by order to do so, but must keep clear of all regular trains as required by rule.

A "work train" is an extra for which the above form will be used for a direct run in one direction. The authority to occupy a specified portion of the track as an extra, while working, will be given in the following form:

(2) Car No. 20 will work as an extra from 7 A. M. until 6 P. M. between Berne and Turin.

The working limits should be as short as practicable, and changed as the progress of the work may require. The above may be combined, thus:

(3) Car No. 20 will run extra from Rome to Berne, and work as an extra from 7 A. M. until 6 P. M. between Berne and Turin.

When an order has been given to "work" between designated points, no other extra must be authorized to run over that part of the track without provision for passing the work train.

When it is anticipated that a work train may be where it cannot be reached for meeting or passing orders, it may be directed to report for orders at a given time and place, or an order may be given that it shall clear the track for a designated extra, in the following form:

(4) Work Extra, Car 20, will keep clear of extra 51 South between Antwerp and Brussels after 2:10 P. M.

In this case extra 51 must not pass either of the points named before 2:10 P. M., at which time the work train must be out of the way between those points.

When the movement of an extra train over the working limits cannot be anticipated by these or other orders to the work train, an

order must be given to such extra to protect itself against the work train in the following form:

(5) Extra 51 will protect itself against Work Extra, Car 20, between Lyons and Paris.

This may be added to the order to run extra.

A work train when met or overtaken by an extra must allow it to pass without unnecessary detention.

When the conditions are such that it may be considered desirable to require that work trains shall at all times protect themselves while on working limits, this may be done under the following arrangement. To example (2) add the following words:

(6) Protecting itself against all trains.

A train receiving this order must, whether standing or moving, protect itself within the working limits, and in both directions on single track, against all trains.

When an extra receives orders to run over working limits it must be advised that the work train is within those limits, by adding to example (1) the words:

(7) Car 20 is working as an extra between Berne and Turin.

A train receiving this order must run expecting to find the work train within the limits named.

177. Hold

Form G.—Holding Order.

EXAMPLES.

(1) Hold Train No. 6, Car No. 206.

(2) Hold all trains east.

This form will be used only in special cases to hold trains until orders can be given, or for some other emergency. The reason for holding may be added, as:

“For orders.”

This order is not to be used for holding a train while orders are given to other trains against it, which are not at the same time given to it in duplicate. It must be respected by conductors and motormen of trains thereby directed to be held as if addressed to them. Conductors and motormen, when informed of the order, must sign for it and obtain “complete.”

When a train is so held it must not go until the order to hold is annulled, or an order is given in the form:

“..... may go.”

This must be addressed to the person or persons to whom the order to hold was addressed, and must be delivered in the same manner.

Form H.—Annuling a Scheduled Train.

178. Train No..... of is annulled.

EXAMPLES.

(1) Train No. 1 of February 29th is annulled.

(2) Train No. 3, due to leave Maples Saturday, February 29th, is annulled.

Adding "from Ayr" or "between Ayr and Greenock," when appropriate.

This order takes away all rights of the train annulled, and authorizes any train or person receiving it to use the track as if the train annulled were not on the time table.

If a train is annulled to a point named, its rights beyond that point remain unaffected.

When a train has been annulled it must not be again restored under its original number by special order.

Form I.—Annulling or Superseding an Order.

179. Order No..... is annulled.

This will be numbered, transmitted and signed for as other orders.

An order superseding another may be given, adding, "This supersedes Order No.....," or adding, "instead of"

EXAMPLES.

Train No. 1, Car 201, and Train No. 2, Car 202, will meet at Siding 9 instead of Siding 10.

An order which includes more than one specified movement must not be superseded.

An order that has been annulled or superseded must not be again restored by special order under its original number.

In the address of an order annulling or superseding another order the train first named must be that to which the rights were given by the order annulled or superseded, and the order must be given to the train whose rights were annulled or superseded first before the order is sent for other trains.

DUTIES OF EMPLOYES.

TRAIN DISPATCHERS.

Train Dispatchers Report To.

180. Train dispatchers report to and receive their instructions from the superintendent.

Duties of Dispatchers.

181. They will issue orders in the name of the superintendent or other designated authority for the movement of trains; see that they are transmitted and recorded in the manner prescribed in the rules; keep a record showing the time of arrival and departure of trains at specified points and such other records as may be required, and record all important incidents which occur while on duty.

Care in Sending Orders.

182. They must use great care in sending orders, and not transmit an order faster than the person receiving can take and plainly write it. They will anticipate the necessity for orders as far as possible and have them ready for trains; compel a prompt performance of duty on the part of the trainmen, with a view to preventing delay.

Enforce Rules.

183. They must see that unnecessary business is excluded from the wires; that the rules for the movement of trains by train order are complied with, and that every motorman and conductor has signed for a copy of each new time table issued before he is permitted to go on the road.

Record Orders.

184. They must see that the train dispatcher going off duty makes, in a book provided for that purpose exclusively, a written memorandum of all orders by number that may be on hand not fully executed, and must see that such orders and all business pertaining thereto are fully understood by the relieving dispatcher.

Report Condition of Telephone Lines.

185. They must see that the telephone lines are kept in good working order and report every morning to the chief lineman the condition of the wires upon their division.

Not Allow Unauthorized Persons in Office.

186. They must not permit any unauthorized person to enter the train dispatcher's office.

MOTORMEN AND CONDUCTORS.

Report To.

187. Motormen and conductors report to and receive their instructions from the superintendent.

To Be Fully Informed—Time Table, Bulletins, etc.

188. Before going out on the road they must have a copy of the latest time table, and must examine the bulletin board and be fully informed as to all notices posted for their guidance.

Jointly Responsible for Safety of Trains.

189. They are jointly responsible for the safety of the train and the proper use of all precautions required by the rules and regulations.

Report Defects in Car.

190. On arrival at a terminal station, or where there is an inspector or foreman of repairs, they must report to him any defects in the condition of the cars, or any imperfect action on the part of the brakes during the trip.

Report Defective Switches, etc.

191. They will report promptly, by telephone, to the train dispatcher, any defective switch or target lights, switch locks, defective wire or track, etc., noticed by them. If defect is serious or considered dangerous, train crews must not leave the point unless relieved by order of the superintendent.

Sickness Preventing Reporting for Duty.

192. In case sickness prevents a motorman or conductor from reporting for duty, the dispatcher must be notified in ample time to enable him to obtain an extra man to take train out on schedule time.

Train Orders to be Sent Daily to Superintendent.

193. Train orders received by motormen and conductors must be sent by them daily to the superintendent, unless otherwise directed.

Obtain Permission for Absence from Duty.

194. No motorman or conductor, or other employe, will be permitted to absent himself from duty or to change off with another for a trip or part of a trip or day, without first obtaining permission from his superior officer.

Duties Before Leaving Car in House or Yards.

195. When a train is run into the yard or car house, either day or night, it is the duty of the motorman and conductor to see that all lights are turned off; that the trolley is removed from the wire; that the stoves and heaters are left in safe condition, the dampers properly adjusted and all signals are taken down and put in their proper places before leaving the train.

Trains Not to be Left Unprotected.

196. Trains in commission must not be left unprotected. Either motorman or conductor always remaining in charge, unless necessary to leave momentarily for orders, or to carry out provisions of rules or for safety of trains.

Daily Defect Report.

197. Conductors and motormen will make a written report at the end of each day's run of any defects in their car, so that repairs or alterations may be made before the car is again placed in service.

Remain With Disabled Car.

198. The motorman or conductor of any disabled car, withdrawn from the service temporarily, must remain with car until relieved by proper authority or until car reaches car house.

Do Not Cause Arrests Without Instructions.

199. Motormen or conductors must not, except in cases of extreme emergency, or for a violent or criminal act, cause the arrest of any passenger, truck driver, or other person, without an order from the Superintendent.

Joint Responsibility.

200. Motormen and conductors will be held equally responsible for the violation of any of the rules governing the safety of their trains and must take every precaution for their protection, even if not provided for by the rules. *In case of doubt or uncertainty, take the safe course and run no risks.*

MOTORMEN.

Observe Position of Switches.

201. Motormen are required to observe the position of all switches, and must know that such switches are right before passing over them, and that no portion of their train or car is allowed to stand where it will obstruct other tracks improperly.

Interpretation of Signals.

202. They will be held responsible for detection and careful interpretation of all signals while on the road.

Conversation Forbidden.

203. Motormen while operating cars are permitted to answer questions of superior officers, and to give proper instructions to students only. All other conversation with motormen while car is in motion is forbidden.

Passing Cars.

204. When passing cars on double track in cities or towns, the gong must be sounded and car brought under full control.

Care in Coupling Cars.

205. Motormen must exercise caution and good judgment in moving and coupling cars, and in stopping and starting trains, and must avoid all unnecessary jerking, so as to prevent disturbances to passengers, or injury to persons or property.

Backing Train.

206. When a passenger train runs by a station or other stopping place, they must always give the back-up signal (see Rule 82 C) and receive the response from the conductor before starting back. Great care must be exercised in backing a train to avoid injury to passengers or others by sudden or unexpected movements.

Do Not Move Train at Night Without Lights.

207. They must not move any train or car at night without a light in front and rear.

Do Not Allow Others to Operate Car.

208. Motormen will, under no circumstances, allow any one, no matter what rank, to operate any of the machinery on the car, unless they have a letter directed to them personally and signed by the manager, in which case they will be held accountable for the safety of the train.

Conductor Must Not Stay in Motorman's Vestibule.

209. Under no circumstances shall any person be permitted to ride in motorman's vestibule without authority of the manager, nor shall the conductor remain in the motorman's vestibule longer than is necessary to properly receive or deliver train orders, or attend to any other business requiring his presence there.

Reversing Car.

210. Never use the reversing lever to stop car, except to avoid a collision or injury to a person or animal, or when the brake rigging is disabled.

Descending Grades.

211. In descending heavy grades motormen must shut off the power and allow car to coast, being careful to keep it under control.

Passing Cars at Tongue Switches.

212. Never run against a facing switch point or crossover when meeting a train or car, but slacken speed sufficiently to allow the train moving in the opposite direction to pass before striking switch point.

Economical Use of Current.

213. In order to effect an economical use of the electric current, it is necessary that the continuous movements of starting and increasing speed should be made gradually. An economical start does not jerk a car or train.

In starting a car or train, let it run until the maximum speed of each notch has been obtained before moving the handle to the next notch.

Do not apply brakes when the current is on.

Do not apply current when the brakes are applied.

A great amount of power can be saved by using judgment and discretion in approaching stopping places and switches by shutting off the power so as to allow the train to drift to the stopping place or switch, without a too vigorous use of the brake; but time must not be sacrificed to save power.

Power Off Line.

214. When the power leaves the line, the controller must be shut off, the light switch turned on, and the car started only when the lamp burns brightly. When off over five minutes all trains affected must report to train dispatcher from nearest telephone connection.

Sanded Rails.

215. Never run on freshly sanded rails with brakes full on, except to prevent an accident.

Do Not Slide Wheels.

216. On a slippery rail do not allow wheels to slide; as soon as wheels commence to slide, the brakes must be released and reset.

Spinning of Wheels.

217. Care must be taken, particularly during snow storms, to avoid "spinning" of the wheels with no forward or backward motion of the car. As often as wheels begin to "spin" throw off the power and build up again one notch at a time.

Water on Track.

218. When there is water on the track, run the car very slowly, drifting without the use of power whenever possible.

Motormen to be Present When Apprentices Operate Car.

219. Motormen will not permit apprentices to operate their car except in their presence.

Cars Blockaded.

220. In the event of a blockade of cars from any cause, cars in such blockade must not all attempt to start at one time, but at such intervals as will not overload the power.

Destination Signs.

221. It is the duty of the motorman to see that all cars are equipped with the necessary destination signs and that same are properly displayed.

Passing Vehicles.

222. Motormen are cautioned to exercise great care when a vehicle is being driven ahead of car. Sound the alarm vigorously and run cautiously until the vehicle is passed.

Examine Car Before Leaving Initial Terminal.

223. Before leaving initial terminal on first trip, motormen must examine their car and see that it is fully equipped and in good condition for safe operation. They must make further examinations while waiting on sidings and during layovers at terminals.

Motormen of Work Trains.

224. Motormen of work trains located at other than terminal stations, must in all cases obtain permission of the train dispatcher before absenting themselves from the vicinity in which they are stationed, as they are likely to be called upon at unusual hours.

Thunder Storms.

225. During thunder storms turn on the light circuit.

Passing School Houses.

226. Motormen should use the utmost precaution when passing school houses during recess or when children are assembling or leaving school. The car should be under perfect control.

CONDUCTORS.

Changing Off Before Completion of Trip.

227. In case conductors change off before the completion of their trip they must carefully exchange all orders which they may have, and each must know that his orders are perfectly understood by the other. They must then carefully compare the orders they receive with those in the hands of the motorman of the train to which they have transferred, before proceeding on the trip. Changes of this kind must never be made without permission from the proper officers.

Care to Report Accidents.

228. In case of accident resulting in the loss of life, injury to persons, or damage to property, conductors must use the utmost care in making reports, and such records as will enable them to furnish a full and complete statement of all the facts, with the names and address of all persons who witnessed, or may have information concerning the accident. See Rule 250.

Train to be Supplied With Proper Signals.

229. Each conductor must know that his train is supplied with proper signals.

Collect Fares Promptly.

230. Conductors of passenger trains will pass entirely through their train after leaving each station where their train stops, for the purpose of collecting tickets and fares; and where stops are made at long intervals, they shall frequently pass through to look after the comfort of the passengers.

Time of Trains at Junction Points.

231. Conductors will keep themselves thoroughly posted as to the time of arrival and departure of trains of connecting roads at junction stations.

Render Aid and Information.

232. Conductors are expected to render to all travelers such aid and information as they may need, bearing in mind that many matters plain to the experienced, need explanation to those who are inexperienced, especially to the humbler classes, many of whom are ignorant of our customs and language. Such should command the sympathy of every one.

Provide Seats for Passengers.

233. They will, if possible, provide all passengers with seats, not permitting any one to occupy more seats than tickets entitle, unless there is room for all.

Call Stations.

234. Conductors will see that stations are promptly and properly called in each car in his train; at stations and crossings, where trains leave in different directions, the conductor of each train must announce distinctly in each car before starting, the principal stations on the route.

Conductor at Rear Platform at Stations.

235. When a train is standing, the conductor must be on the ground at the rear of his train, or on the rear platform, unless compelled to be elsewhere in the discharge of his duty.

Conductors on Rear Platform.

236. When stops are made at principal streets, places of amusement, or at any point where a considerable number of passengers enter or leave the train, the conductor must be on the rear platform until such point is passed.

Call Streets.

237. Conductors will announce distinctly the names of streets at which the cars will stop in the principal towns when approaching same.

Disorderly Persons.

238. Conductors will not permit disorderly persons to get on the train; nor allow disorderly conduct on the part of any passenger; promptly repress all disturbances, threatened violence, profane or offensive language.

Signal to Start.

239. Conductors must never give a signal to start unless they can see the rear steps and know that passengers leaving the train are clear of same, or that passengers boarding the train are safely on the car. They must be careful not to give a starting signal when passengers are approaching, or close to a train and about to board it. When flagging railroad crossings conductors will keep rear door closed opposite to the side of the car from which they will flag crossing.

Removing Trolley at Night.

240. Conductors will not remove trolley from wire at end of run or elsewhere at night until after passengers have alighted from the car.

Passengers to Ride Inside of Cars.

241. Conductors must not permit passengers to ride on rear platform when there is room inside the car. The rear platform must be kept clear whenever it is possible to do so, except on cars provided with observation platforms.

Conduct of Passengers.

242. Conductors must not allow persons to put their feet on the cushions of the car or allow them to spit on the floor. They will see that smoking room door is not left open.

Require Transportation.

243. Conductors must require transportation from every person on the train, except such officers and employes of the company as the rules governing free transportation permit to ride without presenting transportation, and employes on duty on the train.

Cars Left on Sidings.

244. When leaving cars on sidings, conductors must know that they are properly secured against running or the possibility of their being blown out on the main track, and that they are left far enough from the main track to safely clear all trains.

Cars Left at Stations or Yards.

245. When leaving cars at stations or yards, they must in all cases be put on storage tracks, and under no circumstances left on passing tracks without permission from the superintendent. If brakes are inoperative wheels must be blocked.

Testing Brakes.

246. Conductors will require their brakes to be tested, cylinder and connections examined, and motorman to apply the air on all air brake cars before starting from the terminal station, or at any point where the air connection may have been cut or broken while switching or otherwise.

ACCIDENTS AND PERSONAL INJURY.

Employees to Render Assistance.

247. In case of accident, however slight, to persons or property, in connection with or caused by any train, the trainmen in charge of same will render all assistance necessary and practicable. In no case will they go away leaving injured persons without first having seen that they are cared for.

Immediate Report.

248. Conductors and motormen will make immediate verbal report to the dispatcher of any accident, blockade or serious mishap of any kind.

Medical Assistance.

249. Trainmen will not authorize medical assistance except for the first visit in severe cases of personal injury, nor will they visit injured persons at any time afterwards, unless specially instructed so to do by the superintendent.

Complete Report.

250. A full and complete report of every accident, no matter how trivial, apparently, and whether on or near the train, will be made by the conductor upon the prescribed forms. In all cases full data must be obtained and stated in the report.

Extent of Injuries.

251. Ascertain carefully the extent of injuries or damages, if any, before leaving the place of accident.

Accidents Caused by Passing the Rear of Standing Car.

252. In case a person is struck by a train or car after passing around the rear of standing train or car, the numbers of both trains or cars must be obtained.

Accidents Caused by Defective Equipment.

253. If accident is caused by any defect or damaged condition of car, the conductor must report same.

Accidents to Employees.

254. Accidents to employes will be reported the same as accidents to passengers.

Obtain Witnesses.

255. The conductor will obtain the names and residences in full of all witnesses on or near the train. The motorman will assist the conductor in securing the names of witnesses whenever practicable.

Other Troubles to be Reported as Accidents.

256. Any trouble or disturbance of a boisterous or quarrelsome character which occurs on a train, or the ejection of a person from a train, will be reported as an accident.

Giving Information.

257. No employe shall, under any circumstances, give any information whatever concerning any accident, delay, blockade, or mishap of any kind to any person except to a properly authorized representative of the company, except as provided by law.

EJECTIONS.

Ejections—When Authorized, and How to be Made.

258. Should a person be found upon the train without a ticket or pass or some form of authorized transportation, he must be required to pay fare and in case he refuses to do so, he should be ejected from the train, only such force being used as is sufficient for his removal, and in no case with unnecessary violence, harsh language, or display of ill temper, or while the train is in motion. The ejection must be made by the conductor and trainmen as an act of legal duty and only in a reasonable manner and at a proper place. It should not be in such a place, in such weather or at such unreasonable hours of the night as might easily endanger the life or safety of the person ejected. The person ejected must not be a child of tender years, a person of unsound mind or a person in such feeble and helpless condition as to be unable to take care of himself at the point of ejection.

Conductors to Protect Passengers.

259. Conductors must attend to the safety and comfort of passengers on their trains and protect them against rudeness, threatened violence, abusive or obscene language. Any passenger acting thus on a train, after having been requested to desist, whether provided with a ticket or not, should be ejected from the train promptly, but not at such a place as will endanger his life or personal safety, and with only sufficient force for the purpose.

Defective Transfers.

260. Whenever a passenger presents a defective transfer, conductors will notify the passenger that transfer is not good, explaining why. If the passenger refuses to pay fare, lift the transfer, enclose it in an envelope, giving time, place, name of passenger, and all facts relating

to the incident and deliver the report to the superintendent as soon as possible. Do not in case of doubt eject a passenger on a defective transfer.

Persons Stealing Rides.

261. Any person caught stealing a ride on a car must never be pushed from the car, or so frightened that he will jump, while the car is in motion.

Witnesses in Case of Ejectment.

262. In case of ejectment, always get names of witnesses, and make full report, the same as in case of accident.

Use Persuasion Before Ejecting.

263. When ejecting a passenger all means to persuade him to leave the car without assistance should be used before taking hold of the passenger.

TRACK AND ROADWAY DEPARTMENT.

Report To.

264. The will report and receive instructions from

Responsible For.

265. is responsible for the care and economical use of all track material and supplies and must keep such records and make such reports of them as is directed. is responsible for keeping the track, roadbed, bridges, culverts, stations, and everything pertaining to the roadway in repair.

Duties Required.

266. He must pass over his division frequently, observe carefully the condition of tracks and bridges and do everything to secure the safety of the road.

Duties of.....

267.has charge of the track foremen and other laborers employed on his respective division and must see that they are competent and perform their duties properly; enforce such discipline as he may deem necessary; keep such records of the time and work done by such men as may be prescribed.

Enforce Rules.

268. He must know that those under him understand and obey the rules governing their respective duties, particularly those having reference to the operation of trains, the displaying of signals, etc.

Work Trains.

269. Work trains and men in charge of them shall be under the direction of when transporting materials and performing work for the track department, subject to all rules and directions for the operation of such trains and such orders as may be given by the.....

Correct Time.

270.must have correct standard time and frequently compare the same with the foremen.

Report Whereabouts.

271.must keep the train dispatcher posted at all times of his whereabouts.

TRACK AND SECTION FOREMEN.

Report To.

272. Track and section foreman report to and receive instructions from the..... They must keep the road-bed up to the prescribed standard, properly drained and ballasted in its proper place.

Duties Required.

273. They must pass over their section at least every alternate day, either on foot or by car and make careful personal inspection of the track, switches, bridges, banks, ditches, road crossings, fences, bonding, etc.

Work Personally.

274. They must engage in work personally and instruct the men under them and see that they properly perform all their duties, reporting any neglect or misconduct to the

Track.

275. They must see that the track is properly lined and surfaced; that the rails are spiked to a true and uniform gauge; ties properly spaced, lined and tamped; proper allowance being made for contraction; bolts and nuts tight, etc. They must know that all switches are provided with locks, take proper care of all signal lights entrusted to them, and know that switch points close tight to the rails.

Switches and Frogs.

276. During freezing weather they must see that switches and frogs are cleaned and salted and in case of heavy snow storms, will keep section men constantly on duty caring for switches.

Rules of Operating Department.

277. They must be thoroughly familiar with the rules and regulations of the operating department, have a copy of current time tables on hand at all times, and be thoroughly familiar with the time of trains over their section.

Lanterns and Flags.

278. They must provide themselves with two red and two yellow flags, two red and two white lanterns.

Removing Rails, etc.

279. Under no circumstances must a rail, switch, or frog be removed nor any part of the track be made unsafe for the passage of trains without first displaying *stop signals*, and never within ten minutes of the time of a regular train. They must bear in mind that extra trains may be expected at any moment.

Display Signals.

280. The foreman is responsible for the proper displaying of signals and must promptly report to..... every case where train men disregard signals.

Observe Passing Trains.

281. When trains are passing, in case anything is observed out of order or dragging, signal the trainmen to stop; or if their attention cannot be attracted, notify dispatcher.

Position of Foreman.

282. Where practicable the foreman will stand on the right hand side and the laborers on the left of passing trains. Where this is impracticable the foreman should stand away from his men so that he can readily be distinguished from them.

Observe Signals Displayed.

283. He shall carefully observe the signals displayed by trains and be constantly on the lookout for extra trains. In case a train is running in sections, allow all sections to pass before obstructing the track. Acknowledge all whistle signals given by passing trains.

Report Defects.

284. Report to dispatcher immediately any defects noted.

Patrolling Tracks.

285. During heavy wind or rain storm detail a sufficient number of men to watch the road.

Special Examinations of Bridges, etc.

286. After heavy rain storms make a special examination of bridges, culverts, etc., reporting immediately to the..... any damage that may have occurred; if the damage is likely to interfere with the safe movement of trains, protect with proper signals and notify the dispatcher. Take every precaution to prevent accidents without waiting for instructions.

Foggy Weather.

287. In case of heavy fog or storm, do not attempt any work that will obstruct the track except in case of emergency and then only with proper protection by flags and signals.

Weeds.

288. All weeds must be cut down at the proper time.

Scrap Material.

289. Any material dropped from cars shall be picked up and stored.

Hand and Push Cars.

290. Hand cars must be run with great caution and never attached to moving trains. Hand and push cars must not be used except in the service of the company, and no one will be allowed to ride except employes in the proper discharge of their duty. When not in use, they must be kept locked and secured at such a distance from the track as will properly clear passing trains. They must not be left on road crossings.

Care in Using Hand Cars.

291. When using hand cars at least one man shall face in each direction, keeping a sharp lookout for trains, and before rounding a curve or when view is obstructed, the car shall be stopped and proper precaution taken to prevent an accident.

Loading of Hand and Push Cars and Clearing Schedule Trains.

292. Hand and push cars must be so loaded as to prevent jumping the track and admit of their prompt removal and must be off the track and clear of the line five (5) minutes before schedule trains are due. Push cars must not be put upon the main track until proper signals have been placed. Hand and push cars will not be allowed on the track after sun down, except in emergency, in which case they will display a white and a red light.

Taking Hand or Push Cars Into Switches.

293. Main track switches must not be opened to allow hand or light loaded push cars to pass to and from the main track. Such cars must be lifted from one track to the other.

Switch Keys.

294. Foremen must not allow their switch keys to pass out of their possession, and must personally attend to the opening, closing and locking of all switches in connection with their work, and must not open or close switches for train crews.

Injury to Stock.

295. Section foremen will do all in their power to prevent the killing of or injury to stock. They must keep fences and cattle guards in good repair, see that all farm gates are kept closed and report to the the property owner's or tenant's name and designate location of gates found open.

Live Stock on Right-of-Way.

296. All live stock found within the right-of-way must be immediately driven a safe distance from the right-of-way and owners, when known, notified to keep them off the right-of-way. Investigate every case of injury to stock.

Disposition of Killed Stock.

297. When stock is killed or injured, the section foreman will notify the owner, and if he does not take charge of the carcass within twelve (12) hours, the foreman will make such disposition as themay advise, first appraising the value of the animal, acting with one or more disinterested persons. Render all assistance possible in every case of accident, whether accident occurs on their own or adjoining sections, making a careful and complete report on proper form.

Highway Crossings.

298. Highway crossings must be examined to see that the crossing is in safe condition and that the flangeways are properly cleaned.

Switch Lamps and Sign Posts.

299. Switch lamps and targets must be kept in good order, also mile posts, whistle posts, crossing and station signs, etc.

Encroachments.

300. See that no encroachment is made on the right of way or other land belonging to the company.

Tools.

301. All tools at the close of the day's work must be safely stored.

Old Ties and Rubbish.

302. Old ties and rubbish will be disposed of under instructions from the

Location of Switch Stands.

303. It shall be his duty to study and observe carefully the location of all switch stands and other signals; see that the view is unobstructed to an approaching motorman, and see that such signals are kept in good repair. When he cannot make such repairs nor remove such obstructions without authority, he shall call the attention of the to the facts in writing.

MAINTENANCE OF OVERHEAD LINE.

..... Report To.

304. The will report and receive instructions from the He is in charge of all linemen and is responsible for the condition of all overhead work, including telephone and signal service.

Linemen Report To.

305. Linemen will report to and receive instructions from the and will, when repairing any line trouble and when necessary, give the proper signals to trainmen as to the operation of their cars at that point and shall also protect themselves by flagmen or proper signals when working at night or on curves or at any place where the view is hidden by some obstruction.

Care of Live Wires.

306. They will exercise great care not to permit any wire to hang near the ground where any person or animal would be liable to come into contact with it.

Poles Not to Obstruct View of Switch Stands or Signals.

307. must not set or permit poles to be set so as to in any way obstruct the view of a motorman of an approaching car of any switch stand or signal and should he find, or his attention be called to, a switch stand or other signal where the view is obstructed, he must take immediate steps through his proper officer to have it corrected.

Correct Time.

308. Line foremen must have correct standard time and daily compare the same with the train dispatcher.

Rules of Operating Department.

309. They must be thoroughly familiar with the rules and regulations of the operating department, and have a copy of current time tables on hand at all times.

Switch Keys.

310. Line foremen must not allow their switch keys to pass out of their possession, but must personally attend to the opening and closing of all switches in connection with their work and must not open or close switches for train crews.

Must Have Pilot.

311. Men not familiar with the road and time table must have with them an authorized employe to act as pilot. Linemen must be governed by the rules for and set all signals required of section foremen when running hand cars, tower cars, push cars and speeders.

Hand Cars, Etc., Only to be Used in Service.

312. Hand cars, push cars, tower cars and speeders must be run with great caution and not be used except in the service of the company, and no one will be allowed to ride except employes in the proper discharge of their duty. When not in use they will be kept locked and secured at such distance from the track as will properly clear passing trains. They must not be left on road crossings. Main track switches must not be opened to allow such cars to pass to and from the main tracks; they must be lifted from one track to the other.

Handling Wires.

313. To handle trolley, feed, telephone and signal wires when down on the ground, employes must always stand on dry wood or rubber. They must be sure that no nails or other metal is sticking through same to the ground. They must keep their body clear of all metal and ground connections of any kind, such as iron poles, rails and wires other than the one to be picked up. After getting rope or pick up on the wires they must not touch the wire after stepping from board to the ground.

Insulated Cars.

314. In case a car becomes insulated from the rails when making stops on road crossings, occasioned by dry earth or other matter between rail and wheels, hold switch hook in fold of coat and give it a ground by making contact with the rail first; then lean switch hook against wheel or truck frame. Controller must be in OFF position when contact is being made. Break contact first at the wheel or truck frame.

This rule for insulated cars applies to all lines having 600 volt trolley pressure. Further precautions are necessary for higher trolley voltage.

High Tension Wires.

315. Before handling high-tension circuits be sure that current is shut off at the power house or substations. Before getting closer to wires than three feet throw a chain over circuits each side of the place where work is to be done and be certain that chain is in perfect contact with all phases of chains grounded. The chains should have twenty feet of paraffine rope at each end.

SAVING FROM DEATH BY ELECTRIC SHOCK.

By Frederick Strang Kolle, M. D.

1st.—Lay the patient on his back.

2nd.—Move the tongue back and forth in the mouth by seizing it with a handkerchief or the fingers, while working the arms to induce respiration.

3rd.—Don't pour anything down the patient's throat.

4th.—Try to cause the patient to gasp by inserting the first and second fingers in the rectum and passing them suddenly and forcibly toward the back.

5th.—If possible, procure oxygen gas and try to get it into the lungs during the efforts at artificial respiration.

6th.—Get a doctor as quickly as possible.

7th.—Treat the body as though it had been under water, by trying to obtain artificial respiration.

The above items have been arranged in the manner given to avoid the immediate necessity of reading that which follows in cases of emergency. It is quite natural to realize that the victim of shock must be pulled out of circuit or disconnected from the wires carrying the current. To do this a stick of dry wood, a piece of dry cloth, a coat or a soft felt hat may be used. It will be understood, therefore, that means are taken more or less familiar to the electrical man for removing the body from continued danger of this kind; the best to use being of course rubber gloves for this purpose, if convenient.

Air the Lungs.—The patient must be made to breathe *at once*. To accomplish this, lay him on his back with a coat under his shoulders to throw out the chest. Then lift his arms over the head and back again until they press against the chest. This process will force air

in and out of the lungs, as required. A second party ought to assist in pulling the tongue forward, when the arms are raised above the head and let it fall back when the arms press against the chest.

Rate of Breathing.—The rate of breathing produced artificially should be sixteen times a minute; a little more or less will not affect the result.

Jaws Locked.—If the jaws are locked by the clenching of the teeth, force them open with a knife or spoon handle, or their equivalent, so that the tongue can be seized and moved as described.

Effects of Tongue on Teeth.—By the rubbing of the lower side of the tongue on the under row of teeth the patient is apt to gasp automatically, and thus fill the lungs with air. The fact that an effect of this kind is possible is a good sign, and should be produced at intervals of a few seconds if possible.

Time of Keeping Up Artificial Respiration.—The operations indicated should not be discontinued for a long time. In many cases an hour or more is required before the body begins to resume its natural functions, as shown by the beginning of ordinary breathing.

Throat Free.—The throat must be free to admit air, when the lungs are inhaling, by the upper movement of the arms. The movement is similar to that transpiring during the process of yawning and stretching the arms over the head. The inhalation must be made as deep as possible and the operations leading to it continued with systematic care until results are visible. Filling the throat with the back of the tongue at the wrong time will mean failure. Therefore, the movement of the tongue back and forth must be intelligently performed.

Paper Cone for Oxygen Gas.—An inhaling cone may be made of paper, the larger end over the patient's face and the smaller end or stem attached to the oxygen tank by means of a piece of rubber pipe. A little oxygen in the lungs causes a strong heart action, and operates to revive quickly.

Friction of the Limbs.—Rubbing of the body is a secondary means of hastening the blood circulation. The inactivity of the lungs and heart are due to a temporary paralysis or shock caused by the passage of the current. The removal of this condition means resuscitation, part of which process may be carried out by massage of the body and limbs.

General Character of the Treatment.—As may have been noted in reading this popular version of the means of assisting recovery from shock by electricity, the general drift is in the direction of getting the patient to breathe and his heart to beat strongly. Other legitimate ways may be tried, but they must not be so heroic as to induce death during so critical a condition. The continuance of an accepted method is better than irrational experiments. These should be checked at once, and the above program followed out, until a physician takes charge of the case.

COPIES OF SECTIONS OF CRIMINAL CODE OF STATE OF INDIANA,
EFFECTIVE APRIL 15TH, 1905.

Railroad Crossings—Steam or Electric—Stops.

Sec. 668. Whoever, being the engineer of any locomotive or the motorman of any interurban electric car running upon any railroad track, upon or over which passengers are, or may be, transported, runs such locomotive or interurban electric car across or upon the track of any other railroad or interurban^{*} railroad at a place where no system of interlocking works or fixtures is maintained as provided by the laws of this State, without first coming to a full stop before entering upon or crossing such other track, and without first ascertaining that there is no other train, locomotive or car in sight, approaching and about to pass over such other track; or whoever, being such engineer or motorman, runs such locomotive or interurban electric car upon or across such tracks, when a locomotive or car is in sight, approaching and about to pass upon and over such crossing on such other track, shall, on conviction, be fined not less than one hundred dollars nor more than one thousand dollars, and be imprisoned in the county jail not less than three months nor more than one year; and if any person shall be injured or killed by reason of such crossing, such engineer or motorman so violating the provision of this section shall be imprisoned in the state prison not less than two years nor more than fourteen years.

Deceiving Engineer or Motorman.

Sec. 669. Whoever shall falsely report to the engineer of any locomotive or motorman of any interurban or electric car running upon any railroad track, upon and over which passengers are or may be transported, that there is no train or locomotive upon the track of any other railroad or interurban railroad in sight and approaching the place where such roads cross, or upon such crossing; or whoever, being the conductor of any train or interurban or electric car, orders and directs the engineer or motorman to violate the provisions of the preceding section; or whoever, being a brakeman of any train of cars, by reason of his gross carelessness or wilful neglect of duty, causes such train or locomotive or such interurban or electric car to run across or upon such crossing, shall, on conviction, be fined not less than one hundred dollars nor more than one thousand dollars, and imprisoned in the county jail not less than three months nor more than one year; and if any person shall be injured or killed by reason of the violation of any of the provisions of this section, the person so violating such provision or provisions shall, on conviction, be imprisoned in the state prison not less than two years nor more than fourteen years.

Railroad Crossings—Running Upon.

Sec. 670. Whoever, being an engineer or motorman, permits his locomotive or interurban or electric car to run upon or across the track of any other railroad or interurban railroad at a crossing not provided with a system of interlocking works or fixtures, before the locomotive or train coming upon the other track shall have passed over

such crossing, if the locomotive or train on the other track shall arrive at the crossing first, shall, on conviction, be fined not less than one hundred dollars nor more than one thousand dollars, and imprisoned in the county jail not less than three months nor more than one year; and if any person be killed or injured by reason of the violation of any provision of this section the person so violating such provision shall, on conviction, be imprisoned in the state prison not less than two years nor more than fourteen years.

Railroad Crossings—Stopping Cars On.

Sec. 671. Whoever, being the engineer, conductor, motorman or other person having charge of any railroad train or locomotive or any interurban or electric car, permits or suffers the same to be stopped or remain stationary upon any railroad or interurban railroad crossing, unless the same is done by united agreement and under specific regulations adopted by the directors of such crossing railroads, shall, on conviction, be fined not less than one hundred dollars nor more than one thousand dollars, and imprisoned in the county jail not less than three months nor more than one year; and if any person be injured or killed by reason of the violation of any provision of this section, the person so violating such provision shall, on conviction, be imprisoned in the state prison not less than two years nor more than fourteen years.

Permitting Cars to be Locked.

Sec. 672. Whoever, being the superintendent, officer, agent or employe of any company engaged in transporting passengers, suffers or permits any of its cars, containing any passenger, to be locked, whether the same is running or standing; or whoever locks or fastens the door or doors of any such car, so that the same can not be easily opened by such passenger; or whoever directs or orders the locking or fastening of any such car door, shall, on conviction, be fined not less than five dollars nor more than five hundred dollars.

Signals for Crossings.

Sec. 673. Whoever, having charge of a locomotive, engine or interurban electric car, fails or neglects when such engine or car is approaching any road crossing to sound the whistle, or if not equipped with whistle, the gong, at a distance of not more than one hundred nor less than eighty rods from such crossing, shall, on conviction, be fined not less than ten dollars nor more than fifty dollars; and if any person is injured or killed by reason of such failure or neglect, the person so causing such injuries shall, on conviction, be imprisoned in the state prison not less than two years nor more than fourteen years, but nothing contained in this section or the preceding seven sections shall be so construed as to interfere with any ordinance or by-law that has been or may be passed by any city or town regulating the management or running of engines or trains within such city or town.

ANNUAL REPORT FROM INSPECTION DEPARTMENT UPON INTERLOCKING PLANTS.

On January 24, 1908, the Commission issued Circular No. 20, as follows:

STATE OF INDIANA.

RAILROAD COMMISSION OF INDIANA.

CIRCULAR No. 20.

INDIANAPOLIS, IND., January 24, 1908.

To Steam and Interurban Railroads:

The Commission has adopted rules requiring each company having charge of the maintenance and operation of interlocking plants to inspect the same monthly and report the inspection to the Commission and requiring companies interested in interlocking plants, but not charged with maintenance and operation thereof, to inspect the same bi-monthly, in the months of February, April, June, August, October and December, and report the inspection to the Commission. The Commission has prepared forms for these reports and they are now in press.

You are, therefore, requested to indicate the official, his address and title, who will make these reports for your company and how many blanks of each kind will be required for the current year, and to whom they should be sent.

The first inspection under these rules will be for the month of February, 1908. A failure to make the inspection and report will be considered by the Commission as sufficient excuse for putting the machine out of service.

Respectfully,

(Signed) CHAS. B. RILEY,
Secretary.

Since that time all the roads have been very prompt in making their reports and when any line has called attention to defects they have been taken up by this department and adjusted with the following results:

<i>Location.</i>	<i>Defects.</i>	<i>Railroad.</i>	<i>Disposition.</i>

North Judson.....	Poor condition.....	P., C., C. & St. L. and C., I. & S.....	Corrected.
Wolcottville.....	Poor condition.....	G. R. & I. and Wabash.....	Corrected.

The above refers to defects of every character whether minor or important and pertaining to either the interlocking plant or the crossing.

Your inspectors feel that the result of the year's work has been gratifying, inasmuch as many obstructions both lateral and overhead have been removed, yet more might have been accomplished

had the statutes in regard to these obstructions been more effective, and it is the opinion of your inspectors that they should be amended on lines submitted for your consideration in other communications.

The Commission will appreciate that the number of accidents that have been investigated and recommendations made, are not numerous as compared to the total number. This is due, however, largely to the fact that the action of the railroads in exercising discipline was satisfactory to the Commission, and all that could be done was done with a view of improving the service before the Commission could act, and in many instances the action of the railroads was such as to prove satisfactory to the Commission after investigation had been made, so that recommendations were not necessary. Many of the accidents reported were of such character that they did not pertain to the operation of the road, and others unavoidable, and many of these reported by the railroads, should not have been reported, so that it was not deemed necessary to make an official investigation.

It is apparent that there has been a marked improvement in regard to the care of detail in the physical road since your inspectors began their work, due not only to our efforts, but to the co-operation of the railroad officials and men. Notwithstanding this work has been gratifying, yet there is room for great improvement, and while the railroad officials have signified a desire to assist us in co-operation with us in every way, yet as in every case, there are exceptions, such as local officials permitting obstructions to be erected and reconstructed and permitting conditions along their track and in their yard so as to be a menace to employes, which should receive their attention without having them pointed out by your inspectors. In the beginning of this work we have found them so numerous and so general that it is practically impossible to cover the grounds and point out the individual instances within a reasonable time, and we are of the opinion that much good can be accomplished by railroad officials and railroad men generally informing themselves more fully in regard to the law relating to these obstructions, and each one entering into a campaign of education to enlighten the people and call attention to the statutes in regard to these things, and endeavor to have them corrected. While our bulletins show a marked decrease in the fatalities, and especially so among the passengers of the railroad, yet the figures concerning accidents to employes are not at all satisfactory, so that it is for the interest of employes of the railroads, for self-preservation if for no other reason, that they pay more attention to these matters.

and by their continual co-operation and more energetic efforts bring about better results.

On the part of the traction systems our work has been very gratifying. At the beginning of the work of this Commission there was very little uniformity of operation so that it was deemed advisable to recommend to them that they compile a standard code of rules, which they readily did, and which all the roads of the state, with one or two exceptions, have adopted, and while all of their men are not as conversant with those rules as they should be, yet an effort is being made to have them post themselves, and they are continually being urged to literally comply. This is being done not only by the officials of the road, but by your inspectors who take advantage of every opportunity to impress upon these men the importance of this thing, and the responsibility that rests upon them. What few defects have been located on the interurban lines have been promptly corrected, their physical condition and equipment have been found in very good condition generally, so that few exceptions have been taken and your inspectors have not been able to report to the Commission a single instance where railroad men have been arbitrary or have declined to heartily co-operate with us in our work.

There has been a very noticeable improvement in the car equipment of the steam roads of the state during the last year. Your inspectors are of the opinion that it is at least seventy-five per cent. better, and it will be observed that the accidents due to defective equipment have been very few. There have, also, been very few accidents in regard to defective roads; what there have been in either of the above cases have been practically unavoidable.

Your inspectors are also glad to note that there is a continual improvement in the personnel of railroad men, and while this is gratifying, yet there is still room for further improvement, which should be followed up aggressively.

Respectfully submitted,

A. SHANE,
Chief Inspector.

INSPECTION OF SAFETY APPLIANCES.

To the Railroad Commission of Indiana, Indianapolis, Ind.:

I beg to submit the following report for the year ending November 30, 1908, on the inspection of safety appliances. Suits were filed as the results of inspections which developed violation of safety appliance law as follows:

Baltimore & Ohio Railroad Company, one violation at Garrett, Indiana. Baltimore & Ohio Southwestern Railroad Company, three violations at Seymour, Indiana. Monon Railroad Company, one violation at South Hammond, Indiana. Southern Indiana Railroad Company, one violation at Huntingburg, Indiana. New York Central & St. Louis Railroad Company, three violations at Ft. Wayne, Indiana.

An examination of the billing upon which the cars inspected were moving, showed all but two of the above cases to be interstate movements. The interstate violations were referred to the Interstate Commerce Commission.

Of the interstate cases, one filed against the Baltimore & Ohio at Garrett, Indiana, covered a violation occurring March 9, 1908, and the case was tried December 15, 1908, with a decision in favor of the complainant. Cases covering the other violations were filed and are still pending.

Two state cases were filed against the Baltimore & Ohio Southwestern Railroad Company at Brownstown, Indiana, county seat of Jackson county, covering the violation at Seymour, Indiana, and these two cases are still pending.

As the result of yard inspection, tracks have been re-arranged to conform with proper requirements. In three different railroad yards a cleaning up has been had, with the result that dangerous articles lying around the yards, such as pieces of coal, coke and other rubbish, have been cleaned up and taken away, leaving the yard in a much safer condition for the employes to work in.

Respectfully submitted,

C. M. PREBLE,
Inspector.

PROCEEDINGS

OF THE

FIRST ANNUAL

Indiana Railroad Convention

PREScribed BY THE GENERAL ASSEMBLY
OF 1907

Held November 10, 1908, under the Direction of the Railroad
Commission of Indiana

PREFACE.

On January 24, 1907, the General Assembly of the State of Indiana passed a joint resolution directing the Railroad Commission to investigate certain railroad accidents, and to report its findings and conclusions to the assembly.

The Commission carefully performed this duty, and recommended, among other remedial measures, a bill which passed and was approved March 12, 1907, the same being Chapter 272 of the Acts of 1907, entitled "An act to provide for the safe operation of railroad trains on steam railroads in this state." Section 2 provides as follows:

Be it further enacted, That the Railroad Commission of Indiana shall call together in convention, at least once in every year, the division superintendents and such other operating and dispatching officers and employes of the steam railroads of this State as the Commission may deem best, and shall place before said convention the reports filed with the Railroad Commission with reference to railroad accidents that have taken place during the year, together with such findings and conclusions thereon as such Commission shall have made, and said convention shall thoroughly investigate said reports, findings and conclusions and discuss the same with a view to taking such steps by the Commission, by such railroad companies and by their officers and employes as may be necessary or expedient to prevent such accidents.

STATE OF INDIANA.

RAILROAD COMMISSION OF INDIANA.

CIRCULAR No. 27.

To All Steam Railroad Companies:

By virtue of an act of the General Assembly, *To Provide for the Safe Operation of Trains on Steam Railroads in This State*, approved March 12, 1907 (Acts 1907, page 584), it is made the duty of this Commission to call an annual convention of division superintendents and such other operating and dispatching officers and employes of the steam railroads as the Commission may deem best, for the purpose of considering railroad accidents that have taken place during the year, and to consider the proper steps to prevent such accidents.

Now, therefore, the Railroad Commission of Indiana calls this convention to take place at its rooms in the State Capitol at 10 a. m., on the 10th day of November, 1908.

You are directed to have in attendance at this time and place all division superintendents of your lines in this State, and such trainmen, not exceeding two trainmen for each 200 miles of your railroad or fraction thereof, whose service records and length of service in your company indicate that their counsel and experience may be of benefit to this convention.

You will please advise the Commission, in response to this circular over the signatures of your general managers or general superintendents, the names and postoffice addresses of the superintendents and trainmen who will represent your lines at this convention.

By order of the Commission.

CHAS. B. RILEY, Secretary.

Indianapolis, Indiana, September 28, 1908.

INDIANA RAILROAD CONVENTION.

BULLETIN No. 1.

Indianapolis, November 10, 1908.

Killed on Steam Roads During Year Ending June 30, 1908—

Passengers	10
Employees	105
Travelers on highway.....	70
Trespassers	161
	<hr/>
	346

Employees' Death Roll—

Conductors	11
Engineers	9
Firemen	4
Train and switchmen.....	46
Laborers, unclassified	35
	<hr/>
	105

Collisions on main line (all kinds).....	50
Collisions on railroad crossings.....	6
Collisions on railroad crossings, steam and electric.....	3

NAMES OF DELEGATES.

Baltimore & Ohio Railroad Company—

B. W. Duer, Superintendent.....	Chicago, Illinois
M. J. Halliman, Conductor.....	Chicago, Illinois
J. M. Elder, Conductor.....	Chicago, Illinois

Baltimore & Ohio Southwestern Railroad Company—

J. C. Hagerty, Superintendent.....	Cincinnati, Ohio
H. E. Herrod, Conductor.....	Cincinnati, Ohio
F. M. Gilbert, Conductor.....	Cincinnati, Ohio

Chicago, Cincinnati & Louisville Railroad Company—

R. P. Dalton, General Superintendent.....Chicago, Illinois
 D. E. Shea, Conductor.....Peru, Indiana
 J. B. Patton, Conductor.....Peru, Indiana

Cincinnati, Hamilton & Dayton Railway Company—

J. W. Spencer, Engineer.....Indianapolis, Indiana
 O. M. Lemen, Conductor.....Indianapolis, Indiana

Chicago, Indianapolis & Louisville Railway Company—

J. B. Sucece, Superintendent.....Chicago, Illinois
 W. B. Jones, Superintendent Transportation....Lafayette, Indiana

Chicago, Indiana & Southern Railroad Company—

George Hannau, Superintendent.....Gibson, Indiana
 R. Rathburn, Conductor.....Danville, Illinois
 J. W. Smith, Conductor.....Danville, Illinois
 H. A. Zeisel, Superintendent.....Kankakee, Illinois
 F. L. Howard, Conductor.....Kankakee, Illinois
 E. E. Phillips, Brakeman.....Kankakee, Illinois

Chicago, Lake Shore & Eastern Railway Company—

J. Kirk, Superintendent.....Joliet, Illinois
 H. A. Combs, Conductor.....South Chicago, Illinois
 O. Baumer, Engineer.....Joliet, Illinois

Chicago Terminal Transfer Railroad Company—

J. L. Nichols, Superintendent.....Chicago, Illinois
 C. L. Negley, Examiner of Trainmen.....Chicago, Illinois
 A. A. Green, Conductor.....East Chicago, Indiana

Chicago & Eastern Illinois Railroad Company—

J. C. Muir, Superintendent.....Danville, Illinois
 P. S. Sampson, Superintendent.....Brazil, Indiana
 C. M. Hazard, Engineer.....Watseka, Illinois
 O. R. Watson, Conductor.....Danville, Illinois
 Warren Blair, Conductor.....Brazil, Indiana
 T. E. Burns, Engineer.....Brazil, Indiana

Chicago & Wabash Valley Railway Company—

F. E. Lewis, Superintendent.....Kersey, Indiana

Central Indiana Railroad Company—

J. E. Spaulding, Trainmaster.....Anderson, Indiana
 William H. Weaver, Engineer.....Anderson, Indiana
 Elmer E. Smith, Conductor.....Anderson, Indiana

Cincinnati, Bluffton & Chicago Railroad Company—

John L. Morgrett, Superintendent.....Huntington, Indiana

Cleveland, Cincinnati, Chicago & St. Louis Railway Company—

E. M. Costin, Superintendent.....Cleveland, Ohio
 S. T. Blizzard, Superintendent.....Wabash, Indiana
 Hadley Baldwin, Superintendent.....Mattoon, Illinois
 D. F. Schaff, Superintendent.....Indianapolis, Indiana
 M. A. Neville, Superintendent.....Indianapolis, Indiana

William White, Engineer.....	Mattoon, Illinois
I. C. Schreck, Engineer.....	Bellefontaine, Ohio
M. J. Mullinix, Conductor.....	Anderson, Indiana
C. C. Wallace, Engineer.....	Indianapolis, Indiana
Frank Edgerton, Conductor.....	Indianapolis, Indiana
L. S. Rose, Signal Engineer.....	Cincinnati, Ohio
Elgin, Joliet & Eastern Railway Company—	
P. F. McManus, Superintendent.....	Joliet, Illinois
E. W. Hensel, Conductor.....	Joliet, Illinois
E. Reilly, Conductor.....	Joliet, Illinois
Erie Railroad Company—	
I. O. Miller, Trainman.....	Huntington, Indiana
E. C. Allen, Superintendent.....	Huntington, Indiana
J. J. Heavy, Trainman.....	Huntington, Indiana
Evansville & Terre Haute Railroad Company—	
Evansville & Indianapolis Railroad Company—	
J. O. Bell, Trainmaster.....	Evansville, Indiana
G. H. Bussing, Supt. Motive Power.....	Evansville, Indiana
J. N. Frost, Conductor.....	Evansville, Indiana
Edw. Farrow, Conductor.....	Evansville, Indiana
Grand Rapids & Indiana Railway Company—	
R. E. Casey, Trainmaster.....	Ft. Wayne, Indiana
Grand Trunk Railway System—	
W. G. Bromlee, General Manager.....	Montreal, Quebec
F. W. Egan, Superintendent.....	Detroit, Michigan
Illinois Central Railroad Company—	
Indianapolis Southern Railroad Company—	
F. D. Bailey, Superintendent.....	Rantoul, Illinois
F. W. Taylor, Superintendent.....	Mattoon, Illinois
P. Laden, Superintendent.....	Mattoon, Illinois
Indiana Harbor Belt Railroad Company—	
H. J. Kennedy, Conductor.....	Hammond, Indiana
Indianapolis Union Railway Company—	
C. M. Dickson, Trainmaster.....	Indianapolis, Indiana
L. Pafflin, Master Mechanic.....	Indianapolis, Indiana
J. J. Cooney, Conductor.....	Indianapolis, Indiana
Lake Erie & Western Railroad Company—	
N. P. Dennison, Superintendent.....	Peru, Indiana
E. R. Bissell, Conductor.....	Muncie, Indiana
Lake Shore & Michigan Southern Railway Company—	
J. R. Morgan, Superintendent.....	Toledo, Ohio
M. L. Reynolds, Superintendent.....	Hillsdale, Michigan
F. H. Wilson, Superintendent.....	Chicago, Illinois
K. K. Dickerson, Asst. Supt. Motive Power.....	Cleveland, Ohio
George Sitlington, Conductor.....	Toledo, Ohio

Louisville & Nashville Railroad Company—

J. W. Logsdon, Superintendent.....Evansville, Indiana
 L. B. Waltz, Conductor.....Evansville, Indiana
 Charles D. Sursa, Engineer.....Howell, Indiana

 H. C. Gage, Conductor.....Toledo, Ohio
 A. F. King, Engineer.....Peru, Indiana

INDIANAPOLIS, IND., NOVEMBER 10, 1908.

10:00 a. m. Session.

The convention was called to order by the Honorable Union B. Hunt, chairman of the Railroad Commission of Indiana, who addressed the assembly as follows:

On behalf of the Commission I desire to thank you for the good of the cause we are all interested in and seeking to serve, and to congratulate you on this splendid representation. I take it there is no division of sentiment among the delegates here present as to the purpose of this meeting. If there be division of sentiment, it is as to the manner in which the purpose is to be carried out.

We had hoped to have an address here today by Mr. Geo. W. Huntley, a conductor on the Lake Shore & Michigan Southern Railway, but we are just advised that he will not be present. We also had been endeavoring to have Mr. Peck, general manager of the Pennsylvania Lines, present and deliver an address, but we are now advised that he cannot be present. The meeting will be somewhat informal. The Railroad Commission of Indiana has been in existence about three and a half years, during which time it has devoted much effort to the promotion of safety upon the railroads in the State, to the prevention of loss of life and property, and more especially to the prevention of the destruction of human life, and I am glad to say that for the greater part the railroads and the railroad trainmen have worked in harmony with the Commission. Three years ago, or two years ago, rather, about the time of the convening of the Indiana Legislature, there were three frightful railroad wrecks in this State. The legislature passed a joint resolution requiring the Railroad Commission to investigate these wrecks and make its report back to the General Assembly, which it did, and out of the report of the Railroad Commission grew the statute which is responsible for this meeting today.

Judge Wood, of the Commission, has probably given more time than any other member of the Commission to this branch of the work. He will state to you the purposes of this meeting at length and the work of the Commission along these lines. I now have the pleasure of presenting to you Judge Wood, of the Indiana Railroad Commission, who will address you.

Commissioner Wood:

Mr. Chairman, and Gentlemen of the Convention—Every day some person is killed on or about the railroads in this State. For the year ending June 30, 1907, 412 were killed. For the year ending June 30, 1908, 391 were killed, 346 of these on the steam railroads. Railroads and railroad men are not responsible for all these fatalities. Trespassers on the tracks and some of the accidents on highway grade crossings, and some other accidents are not to be charged to them. This is willingly conceded at the outset.

November 12, 1906, a railroad wreck occurred at Woodville, in this State, on the Baltimore & Ohio Railroad, in which 44 persons were killed and 150 persons were injured. Two months afterward two other wrecks

took place on the New York Central Lines—one at Fowler, in which 9 persons were killed and 14 injured, and one at Sanford, where 15 persons were killed and 39 injured. In these three weeks, occurring almost simultaneously, 68 persons were killed and 203 injured, including many trainmen, and two persons not identified.

At this point of fatality, or destruction, the people of this State, then in General Assembly at the Capitol, intervened and prescribed in the Railroad Commission act certain duties and powers for the Railroad Commission thereafter to exercise, the intent being to avoid such accidents. And especially the Assembly passed a joint resolution, requiring the Commission to make a "full, complete and impartial investigation of the cause of such accidents, with a view of determining how a recurrence of similar accidents could be prevented in the future." This investigation, in which we were cordially aided by the railroad men concerned, was carefully conducted and concluded.

The cause of the Sanford wreck we could not determine. A freight train was on the siding to make way for a passenger train going in the same direction. A car loaded with powder, about the middle of the freight train, exploded just as the passenger train was passing on the main track. Mr. McAdams, then with the Commission, after a long and difficult investigation by the Commission, wrote a lucid opinion, attributing the explosion to human agency, but our finding was not definite. You will recall also in this connection the destruction by explosion of the town of Fontanet, in this State, and the loss of life. We shall have an able lecture today, illustrating the danger of transporting explosives. This danger is much greater than generally imagined, because the manufacture and transportation of explosives has so greatly increased in this country that it is said no person travels 50 miles on a railroad without passing a car loaded with explosives.

The Woodville and Fowler wrecks were clearly preventable, and were chiefly due to the negligence of two engineers and of other trainmen mentioned in the report.

The Commission recommended two bills to the General Assembly, both of which were passed; one provided that steam railroads in this State whose receipts per mile were more than \$7,500 per annum, should install block signals before July, 1909. And in carrying out this special legislative investigation we shall have an address today from probably the best authority in this country on block systems and signals.

The other bill required the companies to provide rules, to thoroughly instruct their men in the rules, made it a misdemeanor to disobey the rules, and provided further that this convention should be called and that our accident reports and files should be submitted to and investigated by you, the members of the convention, and hence it is that we are here today, and that I have the pleasure of showing you the important purpose for which we are convened.

The action of the General Assembly of 1907 was to establish a safety department for the railroads in the Railroad Commission. We were required to keep informed as to the manner in which railroads were operated for the security of the public, to get and receive information as to whether the road and equipment were kept in proper condition and repair for the security of employes; to appoint inspectors to see that these conditions were maintained.

Our powers in this regard are very comprehensive. It is true we have no way to enforce our orders except to go into the courts, but we came early to the conclusion that the railroad companies and men were more deeply interested in these matters than we were, and that hence where we made an intelligent direction on accurate information and clear understanding of the conditions of American railroading our recommendations would be followed. I am glad to say that while there have been some delays incident, part of them, to money conditions, we have not yet had to appeal to the courts in matters affecting our supervision of the physical road.

And again in exercising these powers I think we have followed the best course in not trying to do too much on the "first shot out of the box." Railroad regulation, especially of the physical road, is now, I may say, to some extent experimental; wisely and intelligently exercised, I have no doubt of its great value to all affected by it. Exercised by incompetent men or a partisan or corrupt Board of Commissioners, it is worse than useless; it is greatly injurious. Now, an engineer starts his engine slowly. He makes sure that everything is in proper condition before he puts on the force that moves persons and property confided to his care at the proper rate of speed. So we who have organized the Indiana Railroad Commission have endeavored so to act that no harm should come from our direction. For instance, the punishments provided by the criminal laws we have not generally attempted to enforce on managers or men. We believe it best to cultivate instead the most cordial relations between this Commission and the officers and men of the railroads. This Commission, by virtue of law, is at the head of railroading in this State. The law is the voice in this country of all the people—the grandest expression of human power in this wide world. It is above the railroads and all their combinations and unions, and yet it is fair and just to them. It is above the men and their combinations and unions, and yet it protects them and their unions and their individual and personal rights. No good railroad man could be an anarchist, and any railroad corporation which defies the law is an anarchist. But we are all here to obey the law—commissioners, officers and men. Gentlemen, I think that this convention may do more good than is imagined. The Commission is required and will submit to you its accident reports and findings. You will possibly deem it necessary to appoint a committee to examine these, and the main questions before that committee and this convention and this Commission is: Why do these accidents take place? How can they be prevented? There is no accident, of course, without a cause, and most accidents are preventable.

I said that the Commission might be regarded as the safety department of all the railroads. Do we need such a department?

Leave out the public for an instant, and let us look at this matter as it affects the employes only. Of course, the superintendents here and elsewhere are intensely interested. It will not do to tell any sensible person that the officers of the railroads do not, above all things, desire the safety of the men who work for them. I have in my mind an incident which recently occurred, where a division superintendent came to my office greatly agitated over the fatal injury to one of his men. I recall another incident where a general superintendent persistently tried, until the evidence left

no room for doubt, to feel that one of his engineers was not responsible for a serious accident. The men here and on the road are interested beyond expression. But still I repeat, Do we need the safety department? I shall resort to figures and statistics again for a moment, not to exaggerate the situation, not to prejudice the public nor the men against the companies or against each other, because the public is partly to blame for this condition, especially where it insists on high speed on roads not equipped for such service, and where it allows railroads to be constructed across other railroads and highways at grade, or allows trespassers to make a thoroughfare of the railroads. And the men are to blame where they disobey the rules and do things which interfere with proper discipline. But I put before you the cold, severe and horrible figures and facts of useless fatalities to call your attention to accidents that good "railroading" would prevent. For instance, during the year 1907 it is authoritatively stated that on a single American railroad 104 employes were killed outright, and 3,575 were injured. In 1904 on all the American railroads the killed and injured employes in train accidents numbered 7,834; in 1905, 7,850; in 1906, 8,362, and 1907, 9,935. So that the total number of accidents to employes has largely increased from year to year.

From another standpoint, although I am not greatly impressed with money losses where human life is, I may say, being squandered—our records show that for one year in this State the total damages to equipment and roadway from accidents was \$206,295.61. The amount paid out in claims for deaths and injuries will probably double this amount. The economic value to the State of good, useful and hard-working men killed will double this, so that the loss in money is more than \$1,000,000. From this standpoint, Do we need a safety department?

I cannot get before you the idea I am seeking to impress better than by quoting from p. 10 of Indiana Accident Bulletin No. 3. In that bulletin we quoted from a book entitled "Restrictive Railway Legislation," written by Haynes, a practical railroad man, and a railroad manager of great ability and experience. Mr. Haynes says:

"The casualties in connection with train movements are more directly to be associated with negligence of employes or administrative mismanagement. To call these occurrences accidents is, to a great degree, a misnomer, for the most of them occur from personal inattention or recklessness, from defect in track or equipment, or from non-observance of rules by employes, and are, therefore, not to be regarded as fortuitous or unavoidable. Either the employes on British railways are more careful or are better protected from casualties in train service than ours are. On the British railways in 1901 out of 575,000 employes one in 1,127 was killed, and one in 135 injured. In the United States in 1903, out of 1,312,000 employes, one in 584 was killed and one in 40 injured. Railroad employes in this country, therefore, run about four times greater risk of being killed and about three times greater risk of being injured than the employes on British railways."

I quote further from our bulletin as follows:

"The lesson taught by these observations and figures of Mr. Haynes, a practical American railroad man, of experience and ability, is greater care and vigilance from the highest officer to the humblest employe. A man who

is reckless of his own life has no business in railway service. A man who is careless of his fellow employes is little better than a criminal at best. Such a man, officer or employe, should keep in his mind the picture of the widow and the orphan who may be left without support by reason of his fault and carelessness. Men in railway service should shun and avoid a careless officer or employe as they would do such a man if he were attempting to attend to his important duties while he was drunk. A higher standard of efficiency should be insisted on. The men know better than anybody else who it is in daily work and service who shirks his duty or who is careless and indifferent in the work he attempts to do. All the writers on this subject, all the practical railroad men who have watched railway operations in this country insist that one of the greatest causes of danger is the American spirit of recklessness. When this is fully understood and carefully avoided we may expect the list of employes killed and maimed to grow constantly smaller and the distress prevailing in the country on this account to be relieved."

Our reports and files will show you four classes who suffer from these accidents. First, trespassers, for whose killing you are not responsible. For I take it without question, whatever some foolish persons, with more prejudice than sense or feeling may say, that there is not an engineer in this State who would willingly and wantonly run his engine against or over any person. This Commission has had this matter under most painstaking consideration, involving the examination of the laws of this country and of Europe, and we expect to secure legislation which will make your tracks railroads and not footways.

Second, travelers on the highways. Here the responsibility is divided, and the only proper solution is separation of the grades. To this end our recommendations to the General Assembly will be directed, so that there may be no more railroad grade crossings hereafter constructed, and so that the expense of separating grades at highway crossings and track elevation may be divided in some fair and equal proration, such as other states have found it to be necessary to provide. I think I may affirm that the efforts of this Commission have stopped the running of railroad crossings in this State; and I am delighted to say that we have accomplished this without imposing on a single engineer the most severe penalties of the criminal law. But there are 10,000 unprotected highway crossings. We kill on them about 100 travelers annually. We have insisted by circular letter that you sound your whistle, as required by law, loudly and clearly, and there must be a lookout and great caution, especially in passing over crossings in the towns and villages. You railroad people must bear in mind that the crossing is a highway as well as the railroad. If a man is entitled to the crossing you have no more right to run your train against and over him than you would have to run against one of your own trains or cars standing on the crossing. But you protect your car or train by orders and signals, and even derails; and hence there should be some protection for the citizen passing along the highway at the point of crossing. I wish to submit a practical matter to you today. It costs too much, you will say, to put gates and watchmen or even electric bells at every crossing, and I am impressed with the idea that some better and more efficient highway crossing device can be invented and put in use than anything we now have. You have

distance signals and automatic appliances and interlocking for the railroad crossing at grade. I beg leave to suggest that you practical railroad men, some of you the very best machinists, shall take up the question of better signaling and protection for highway grade crossings. Whoever shall establish something better and cheaper and more efficient than we now have will not only make a great fortune, but will save so many valuable human lives that he will lay up "treasure where thieves do not break in and steal."

By the way, we have a class of road vehicles nowadays whose speed is equal to that of the steam engine, and as to which some legal restrictions should be made against running grade crossings. I allude to the automobile. These high power machines, whenever running twenty miles an hour, should be required to stop at railroad crossings, possibly to flag over. I read of a case the other day in this State where a bullet-headed chauffeur tried to beat a limited train to a crossing. The chauffeur got there first, and although the engineer shut off steam and put on brakes, he got there also, and his engine knocked the motor car and chauffeur off the track. It is said the engineer cursed this fellow until he turned blue. We had a rule on a little railroad I constructed and managed against swearing. I feel that I could not have enforced it in this case, but that if the engineer said all he ought to have said I would have put him on the list for one of Carnegie's medals. However, on the other side, I saw a curious thing the other day in this city—or rather above it. A balloon was sailing smoothly along. I looked closely and lo! the balloonist had hitched his automobile to the balloon and was thus carrying it safely over all the grade crossings around this city, so that none of you fellows could get, in this case at least, a chance to knock him off the crossing. I commenced to figure at once whether it was safer to ride in a balloon or in a horse carriage or motor car in a State which permitted grade crossings. I came to the conclusion that the balloon was far the safest, and that every family should have one. Again, on the other side, I read a railroad magazine (the railroaders wanted to show, of course, that it was possible for accidents to happen for which they were not responsible) that the Angel Gabriel gave a distinct signal with his loud-sounding trumpet, and said: "Strange, I blew, and looking down to the earth, I observed the only attention paid to me was that all the people rushed for the sidewalk and looked to see which way the automobile was going."

Most seriously, now, gentlemen, I come to the two classes of fatalities for which there is responsibility—and which are preventable. I mean passengers and employes. As to the former, at Woodville and Fowler there were at least fifty passengers killed. That these awful accidents were not only preventable but were chiefly, if not altogether, the fault of the men, there is little question. In bright contrast to this read our fourth and fifth accident bulletins, where we practically say that no passengers except one was killed on the railroads of this State for the last six months, and where we so gladly commended the good railroading that brought about these results. But the accident at Chesterton—a collision, another horror, disobedience of rules, running signals, provided at enormous cost, rear-end utterly protected, fault clearly located. Woodville, Fowler, Chesterton, all alike, and when the other killings of employes bulletined there for your

most thoughtful consideration—conductors, engineers, firemen, brakemen—almost in every accident some employe, often one of the best men on the road, goes to premature and final account.

Mr. Schoyer, of the Pennsylvania Railroad, in a recent address, said, "I don't know what causes all these accidents."

There is a cause, and I think it is the chief duty of this railroad convention to ascertain that cause. The public, that is, the State, wants to know; has the right to know. It has created this Commission and brought you men here to advise the Commission, and the light is to be turned on, and we are all to know, and then to take, if possible, the steps necessary to prevent. Said the eminent railroad man I have quoted, "A man can make a mistake in any other line of business and it can be corrected, but let an engineer make the slightest mistake and there are apt to be serious results." And again he said, referring to the absolute necessity for discipline, "Our men cannot act like automatons; they have to obey like an army and think like a general, and to require a combination of the thought of the general and the instant obedience of the private is the difficult problem before the railroad officer today, and the only way he can do so is by strict discipline, which in some way will fasten the impression on the mind of the other man when a mistake is made."

I hold in my hand a book just published entitled "Confessions of a Railroad Signalman," by James A. Fagan. While I do not subscribe to all he says, there is much food for thought in this book. On page 52 Fagan says, "Eighty-five per cent. of the fatalities that occur on our railroads can be directly traced to the negligence of employes." Again, on page 20, he says, "It is actually a matter of reasonable demonstration that at least seventy-five per cent. of the casualties might be avoided by increase of interest on the part of employes, and the earnest concentration of his best thought on the subject." Again on page 40 he says, "There is practically no out-on-the-road supervision of American railroads. Railroad managers depend upon the reports of employes for information with regard to violations of the rules. But employes do not, and cannot be compelled to report their associates; consequently, negligence of all kinds is practically unchecked. Finally he says, "Unchecked negligence can be shown to be the root and direct cause of nearly all preventable accidents and loss of life therefrom on American railroads."

But Mr. Fagan turns from the men, and criticizing the State authorities, says, on page 172. "It cannot be denied that railroad commissioners in general are aware that interference with discipline in aggravated form is a recognized principle on our railroads."

I think this statement is too strong. If Mr. Schoyer can say, I don't know what causes all these accidents," railroad commissioners of less capacity will hardly hasten to a conclusion on so important a subject. But Mr. Fagan is surely correct in insisting that too little attention has been given to classifying, to studying and to publishing the facts, and when this is done it will necessarily lead to just and correct deductions. Mr. Fagan asks pertinently for the names of employes, managers, politicians or legislators who have studied these railroad accidents at close range, and given the public the benefit of their investigations. "If," he says, "these authorities have given little time and no thought to the subject, the public should

be informed why they have avoided the discussions." And he says, "Investigation has been avoided, because no man can apply a probe to a serious railroad accident without running the risk of a clash with a labor organization."

Gentlemen, this is a most serious charge; namely, that railroad men, managers and commissioners are afraid to investigate accidents and find out and publish the truth with regard to them because of labor organizations. While I will not concede that such a condition exists, I can affirm, without being a prophet, that if it does exist it will be changed and corrected. It is clear that a good many of these unions have accomplished for their members better wages, better conditions, insurance departments, some of the legislation proposed and enacted, all indicating betterment for as deserving a class of our citizenship as we have among us. But to say or believe that a condition exists, or shall continue, that encourages or permits or winks at the useless killing of these men by each other will not do for a country which has taken up and settled much graver and weightier problems.

Now, as I said, we are all interested here; the public through its Commission, the managers and superintendents and the men more than anyone else. In 1906, 1,200,000,000 passengers were carried on British railroads. There were only 239 collisions and derailments in that country in that year. We carried on the railroads in this country only 800,000,000 passengers in 1906, and there were 13,455 collisions and derailments; 58 passengers were killed and 631 injured in Great Britain that year; 146 passengers were killed and 6,000 injured in the United States; 13 employes were killed and 140 injured in train accidents in Great Britain that year, while 879 were so killed and 7,483 so injured in this country that year. I quote these startling figures from Mr. Fagan's book, pp. 149-150.

But I am optimistic about all such matters. My conviction is that, shown the evil in this country, correction will be made. The labor unions, the individual railroad man, the railroad officer, the railroad commissioner will finally work in harmony to stop all useless killing and preventable accidents. And hence this convention. This is the effort of the State, representing all of you alike, especially to aid and help you railroad officers and men solve the problem and to better the conditions of railroading in this State. You are hard-working men, and the nobility of labor has always been the proud watch-word of American civilization. Before us today is a matter of conscience and duty. We must not forget that the result of our labors may be the saving of human life, and the consequent happiness and contentment of our kind and our people.

The Chairman: Gentlemen of the Convention—It is not often that the Railroad Commission of Indiana disagrees, but I want to say that when Judge Wood states that he wants to ride in an automobile hitched on to a balloon, he does not voice the sentiment of the majority of this Commission. (Laughter.)

The railroad officials of Indiana are tolerably well acquainted and familiar with Judge Wood and myself. They have transacted business with us many times, but we have a new member of

the Commission, with whom you have not transacted much business, and who has not had the privilege of meeting a great many of you. I have the honor and pleasure of presenting to you the Hon. Henry M. Dowling, who succeeded Mr. McAdams on the Railroad Commission.

Commissioner Dowling:

Mr. Chairman and Gentlemen of the Convention—After the able presentation of the objects of this meeting by Judge Wood, I should not trouble you with any discussion of the general subject of railway accidents, were it not for a remark made to me some time since by an attorney for a railroad company. This gentleman, himself amiable and kindly disposed, declared that his road did not care how many people it killed, if it did not have to pay for their killing. From my acquaintance with railroad officials and employes, I am confident that lawyer did not express the feeling prevailing among those engaged in railway operation. Railway officers and men are no more indifferent to the sacrifice of human life than are those who are engaged in other lines of employment. However, they, as well as our citizenship at large, are too apt to discount the value which human life possesses and to regard the frightful mortality on railways as merely an unfortunate but necessary accompaniment of an extra hazardous business.

We Americans are not so keenly sensitive to the worth of human life as it behooves us to be. While the newspapers and magazines, dealing with wholesale slaughter by war, earthquake or conflagration, are eagerly read by millions of our people, the attention with which such accounts are regarded springs not so much from solicitude for the unhappy victims of the catastrophe, as from a morbid taste for the tragic and the terrible. Some time ago a Southern daily headed every column upon its front page with the words "Blood! Blood! Blood!" and the same inscription would not be inappropriate to the pages of almost any great newspaper in the United States. Why are these horrors so constantly depicted by the press? The latter does not *create* the desire for them; it merely reflects a depraved popular appetite. The demand for the sensational is insistent; the newspaper only supplies the demand.

The same taste for the spectacle of slaughter appears in the character of the plays which are most popular at our second-class theaters. Unless the bill-boards can display a hero with pistols in both hands, or an entire band of highwaymen exterminated by one volley, they fail to have the proper relish.

Our juries are too often infected with the same indifference to the value of life and the importance of its safe-guarding. Foul, indeed, must be the crime which will induce an American jury to return a verdict leading to the execution of a criminal; and this, not from any tenderness upon the subject of capital punishment, but from a callousness to the real enormity of the culprit's offense.

Within a comparatively recent period, we were largely indifferent to the sacrifice of life from preventable disease. Statistics show that the deaths of eighty per cent. of the school children who died in Indiana in 1907

were unnecessary, and could have been prevented if scientific methods had been followed. Only in the last few years has public opinion been aroused to the need of curbing the slaughter wrought by tuberculosis.

Were further proof required to substantiate the fact that, as a people, we underestimate the importance of protecting human life, let the reckless driving of automobiles and the breathless haste of our great cities bear witness to the utter disregard of the pedestrian amid the jostling crowds of a metropolis.

It might be a matter of interest to discover the reason why this American indifference has gained so strong a foothold. It might be attributed to our extreme commercialism, the dollar being more highly regarded than the man who makes it; or perchance it may be more properly traced to our familiarity with the events wherein men are injured or killed. Year after year our attention is called to homicides, deliberate or unintentional, until they cease to produce any impression whatever. Between the years 1885 and 1904, some 2,917 men were lynched in this land of law and sheriffs and juries. During the same period 86,647 valued their own lives so lightly that they died by their own hands. In this same twenty-year epoch, the murders and lesser grades of homicide in the United States aggregated 131,951, leaping from 32 to a million inhabitants in 1885, to 104 to each million in 1904.

But how stands the account with reference to unintentional sacrifice of life? Five hundred thousand are annually injured in all industries of the United States, a number sufficient, twice over, to populate a city the size of Indianapolis. In the eight years, from 1897 to 1904, the railroads of this country killed 60,213 persons and injured 451,262; in other words, they killed a number almost equal to the population of Evansville, and injured nearly twice as many people as reside at your state capital. In the year 1904 alone, these roads killed 10,046, and injured 84,155. In 1905, there was one trainman killed for every 133 employed, and every ninth man engaged in railroad service was injured. In other lines of employment the reports are grewsome enough, though they are far less appalling than those relating to railway operation; for one man is killed to every 411 employed, and one in 21 is injured.

But there are signs of improvement. While the American people have manifested a paralysis of sentiment respecting unnecessary mortality, public opinion is being stimulated to see that the distinction between avoidable homicide and crime is not a wide one. Slaughter by disease is being lessened; consumption, which is said to have slain seven times more men during the civil war than died in battle, is now being fought to extermination. Slaughter by impure foods and drugs is being antagonized by State and Federal governments. Slaughter by industrial accidents is restrained by the activity of factory and mine inspectors; and accidents upon railways are sought to be reduced by the passage of safety appliance, full crew and 16-hour laws.

The question comes home forcibly to you who are engaged in the railroad service: "Are these social, industrial and commercial reforms to go forward to the successful reduction of the loss of human life, while the vast railway industry of the State lags behind and takes no steps to keep pace with this march toward better things? Or shall railway employers

'and employes, aided by the efforts of the Railroad Commission, bend their energies in the direction of creating public opinion, and especially *railway* opinion, to the end that every reasonable safeguard can be thrown around the lives and safety of passengers, trainmen, highway travelers and even trespassers, so that this annual sacrifice of mankind may be materially diminished?' This can be done. Much can be accomplished through the newspapers and railway journals; much through the publications of the labor unions, and in meetings of brotherhoods and associations of railway employes; much can be achieved through a hearty co-operation of superintendents and men with the Railroad Commission in securing legislation to effect these objects, and through the work of your committee in investigating accidents occurring within the State of Indiana and suggesting to the Commission means for their future prevention.

The Chairman: We expected to have an address here, as I stated at the outset, by Mr. Peck, the general manager of the Pennsylvania Lines. Mr. Peck is not here. If there is any railroad superintendent or manager here who has some suggestions to offer to the Commission and the convention, we would be very glad to hear from him, or any representative of the train men here who desires to make any suggestions to the Commission or the convention, we will be glad to hear from you. I hope you will feel perfectly free to participate in this discussion, as the Commission can not do all the work and it don't want to do all the talking.

Commissioner Wood: Mr. Chairman—There is one thing you will notice about railroad men: they do a heap more work than they do talking. Perhaps that is the reason they do not respond. I made some suggestions in my speech that there should be other things here besides speeches, and I am going to repeat it. You are members of this convention and you have a right to talk. You have a right to do things and take action on these matters. I am going to move you, sir, that a committee be appointed, consisting of three members of the superintendents and officials, and three members of the conductors and trainmen, with our chief inspector as chairman, and that this committee should take our accident reports, which are filed here, investigate and discuss them and then report to the Commission and public. Now, Mr. Chairman, that can not be done in a day, and men can not work without pay. I went yesterday to the Governor and stated to him that under the law we might employ experts, and he agreed with me that we might pay ten dollars a day to these men for serving on this committee. This afternoon, sir, if my motion prevails, let the men and the superintendents get together—and they can get together; we have several rooms here—and they can appoint those men whom they wish to have serve on this committee. I submit the motion.

The motion was put by the Chair and passed by viva voce vote, Mr. Duer voting "no."

Mr. Duer (Superintendent B. & O. R. R. Company): Mr. Chairman—I will have to explain my position. I do not believe, as superintendent of a railroad, I could be on a committee of that kind. I don't think it proper to be on a committee of that kind. I think the superintendent has made this report and has made up his mind as to the cause of the accident; and, therefore, he is not in a position to be on such a committee.

The Chairman: I think you have entirely misconceived the purpose of this motion. There can be no dispute about the cause of the accident, but I think the main purpose of this committee is to provide a means by which such accidents may be prevented.

Mr. Druer: I will withdraw my objection.

Commissioner Wood: I would like to add, that these two committees may act separately, if they want to; they can classify these accidents and act independently of the superintendents to determine the cause. You know about your own accidents, but you don't know about the one on the other line. You ought then to get them all together and see wherein they were alike, or in what respects they were different, and so on; you can act together or not, as you will.

Mr. Coneys: I would like some advice from Judge Wood, as to what he expects us to do; to go through all these reports and finally report back to the Commission our findings?

The Chairman: I think that is the purpose, if I may answer that question; go through the reports and report on them.

Commissioner Wood: Exactly.

Mr. Coneys: I simply asked that question for information, because before we decide on the committee we would like to know just what it is to be. It takes a matter of time, and I would like to know about how many there are to go over.

Commissioner Wood: There are about 1,500. I don't think it would take over two days. There seems to be a great similarity in these accidents. We do not propose to publish the individual road or man, or men, or anything of that sort; we want to get at the cause of the accident; that is all there is to it.

Mr. Coneys: In many of those cases where we were investigating an accident, we have had many meetings and a great deal of discussion before we arrived at the cause, or what we determined to be the cause, but I don't think it is feasible; there are so many things to deal with.

Commissioner Wood: May I ask you this question: Can you think of anybody in the world better qualified than you, or a committee of three men who work on the road, to take up these reports, go over them one by one, classify all these accidents and determine what caused them? Is there anybody on earth who can do it better than you can, Mr. Coneys?

Mr. Coneys: Nobody on earth, better.

Commissioner Wood: The State of Indiana wants that done. We will go on slowly with this thing, and if we get good results out of it, it will be continued; if we do not get good results, we will not try it again. But hadn't we better go try it—it will not take over two days? They will be paid for it. I think we ought to have it; it is a thing to be done.

The Chairman:

Let me call your attention, gentlemen, just a moment to the statute. [Reads]: "The Railroad Commission of Indiana shall call together in convention, at least, once in every year, the division superintendents and such other operating and dispatching officers and employes of the steam railroads of this State as the Commission may deem best, and shall place before said convention the reports filed with the Railroad Commission with reference to railroad accidents that have taken place during the year, together with such findings and conclusions thereon as such Commission shall have made, and said convention shall thoroughly investigate said reports, findings and conclusions and discuss the same with a view to taking such steps by the Commission, by such railroad companies and by their officers and employes as may be necessary or expedient to prevent such accidents."

Now, the Commission is of the opinion, and I think everybody will agree with us, that, to simply dump all these reports on this convention, would be a useless waste of time, and the matter ought to be disposed of through a committee. The Commission has no fixed opinion in this matter as to how it should be best handled; we want to do the thing that will be the best thing and bring the best results. And the only thing I am not pleased with about this convention is that these gentlemen do not seem disposed to talk. You generally talk enough; I have been with some of you gentlemen when you talked too much, but you are not doing it today. I have been out of the city and have not given to the purpose of this convention the careful thought and study that a subject of this magnitude is entitled to, and have made no preparation for any general talk along this line, and shall not indulge in one, as Judge Wood and Mr. Dowling have taken care of that matter very nicely for the Commission.

I do want to say, however, that while we are criticizing to a certain extent the railroad officials and railroad men, that we should not forget that the public itself is as largely to blame for a great number of the accidents which occur, and in some instances, more largely to blame than the railroad and railroad officials. I have seen men drive right up on the railroad track when a train was in sight. There is no excuse for it in the world. I have seen men at railroad crossings in cities drive inside the gates, as they were coming down; and there is no excuse for it in the world and there is no way that that thing probably can ever be prevented, unless you make a gate air-tight, so they can't get through.

I deplore the fact that we as Americans, as Mr. Dowling says, are somewhat reckless, but I do not agree with him that we are more reckless of human life than any other country in the world. It may be along some lines; it may be among the railroad men; we are a little more reckless of human life than some European countries, but in those countries more lives are cruelly and wantonly sacrificed for political purposes and ruthlessly crushed out through selfish motives. So I am not going to stand for this severe condemnation of Americans, and while I do deplore the carelessness of American life, I do not believe that the railroad man who said to my friend, Mr. Dowling, that the thing they objected to, was not killing the men, but paying for them, and I agree with Mr. Dowling in that he did not express the views of the railroad officials. In my association with railroad officials I have found them to be very much like other men; they have the same feelings; they are human beings, strange to say, but they are, and they have about them a great deal of human sentiment, and ought to be willing, and they are going, to join with the Railroad Commission in an earnest effort to prevent the sacrifice and loss and destruction of human life.

As I was sitting here a moment ago, my attention was directed to this passage in Mr. Fagan's book, which Judge Wood has marked: [Reads] "At a glance we perceive that the public is a hundred times more likely to be interested in the uprooting of such a bad habit as running recklessly around curves than it is in placing the responsibility or punishing the offender in any particular instance. Yet whoever heard of a verdict that placed the blame for an accident on a habit? The reasons for the oversight are obvious. A dangerous habit, long continued and unchecked, is a decided reflection on men and management, and, indeed, on the Railroad Commissioners, whose vigilance it has escaped." I do not believe it can be said that this has escaped the vigilance of the Railroad Commission of Indiana.

I am not here for the purpose of singing the praises of the Commission, but I do want to say that where the Railroad Commission has found the blame, it has had the courage to place it, and the man who is afraid of a railroad company or, through the threat of a labor union, afraid to place the blame where it belongs, ought to be impeached and removed from the Railroad Commission, or any other position within the reach of the people. That is the way I feel about it, gentlemen. Now, the position of a railroad commissioner is perhaps the most difficult position to fill within the gift of the people of the State of Indiana, because the Railroad Commission, if it does its duty conscientiously and earnestly,

stands between the railroads and the people, doing equal and exact justice to all, not seeking to court public opinion, not seeking to stand in the lime-light, but seeking to do the greatest amount of good for the greatest number on both sides of the controversy. The railroads are a very important part of our great industrial system. We could not get along without them, and they are entitled to just exactly the same kind of treatment that the individual business man is entitled to, no better, no worse. So far as the Railroad Commission of Indiana is concerned, I feel that I voice the opinion of my colleagues when I say that in the past they have received that kind of treatment and will receive it in the future.

I am here, gentlemen, virtually making a farewell address, and I desire to take this opportunity to thank the railroad officials and the railroad trainmen for the courteous treatment I have received while on the Railroad Commission. It is my intention to leave the Commission now. I have been tendered a much better position, from a financial standpoint, and while I have been able to accomplish much good on the Railroad Commission, and will accomplish some good in the future, I feel I owe it to my family to accept the position. I have not yet formally accepted it. I am in a somewhat similar position to the preacher who was offered a greater salary to accept a larger and more important chair. In addressing his congregation he said it was very painful to him to part with them; that he had been doing the work of the Lord in that vineyard for a long time, and that he was constantly praying to the Lord as to whether he should accept the proffered chair or not. About a month later one of the parishoners met his little son on the street and asked him whether or not his father had made up his mind to go. "Well," says Johnny, "Paw is still prayin', but most of the goods is packed." I am still praying, but most of the goods "is packed," and my opinion is, I will accept it.

I want to thank you again, gentlemen, for the uniformly courteous treatment which you have shown me, and I am sure that the member of the Railroad Commission who succeeds me, and I know that the members of the Railroad Commission who are now serving with me, will be fair and honest in the future, as they have been in the past. I thank you. (Applause.)

Mr. O. G. Ohliger: Mr. Chairman—I want to say a word: The Commission has had the opportunity for the last year and six months to make up their minds as to just what was coming up today. We are here unexpectedly, and while we are in harmony with the Commission and appreciate what the Commission has done, I am here as an individual to say that the investigation of the reports is a proper thing, but we are not in position to do it; we would have been in that position had we known it was coming up.

Mr. McKim: Mr. Chairman—I feel that this convention ought right here and now express its regret, and the regret of the railroads of the State of Indiana, at the decision of the Chairman of the Indiana Railroad Commission to retire from his position, and I make a motion to that effect.

Motion unanimously carried by standing vote of convention.

Commissioner Wood: Mr. Chairman—I am authorized on behalf of this Commission and on behalf of this convention and the men present to express to you our regret at your retirement.

The Chairman: Gentlemen—I thank you all again, and assure you that the regret is mutual.

Commissioner Wood: Mr. Chairman—We have for distribution our Fifth Accident Bulletin. It is a matter for you to look over; you can get copies as you go out. I notice it is now about 12 o'clock, and right after dinner we will have an address on Block Signals, and other important papers will be read; and I move that this convention adjourn to 2 o'clock this afternoon.

Motion carried.

The Chairman: The convention will stand adjourned until 2 o'clock.

AFTERNOON SESSION.

INDIANAPOLIS, INDIANA, SENATE CHAMBER,
November 10, 1908, 2 p. m.

The convention was called to order by the Chairman.

The Chairman: Gentlemen—As a result of the recommendations made by the Railroad Commission to the legislature two years ago, a law was passed, providing that after the first of July, 1909; [reads] “it shall be unlawful for any person, firm or corporation, or the lessee of the receiver of any person, firm or corporation, which shall own or operate any line of railroad in this state, to operate any train over such railroad by steam power unless such railroad is equipped with and has in operation an approved block system for the control of train movements thereon: Provided, That the provisions of this section shall not apply to any such railroad as shall not have a gross annual income from operation of seventy-five hundred (\$7,500) dollars or more per mile of line, to be determined from its last preceding annual report to the Railroad Commission of Indiana.” We have with us Captain Azel Ames, who is the chief signal officer of the Interstate Commerce Commission, who will afford us an address on that subject. Captain Ames.

Mr. Ames addressed the convention as follows:

Mr. Chairman and Gentlemen—The question we have been discussing all day of safety in railroad operation, is an exceedingly interesting one to all parties in any way connected with it. To the Federal government it is surely of interest. You know that winter before last Congress by joint resolution, directed the Interstate Commerce Commission to inquire into the "use of and necessity for block signal systems and appliances for the automatic control of railway trains in the United States," and that last winter they increased the scope of the Commission's powers in this direction by directing them also to inquire into the use of and necessity for all other appliances or systems for the promotion of safety in railway operation, and to carry out its purpose the Commission established a board known as the block signal and train control board, of which I happen to be a member. I think another evidence of the interest of the Federal government in these proceedings is the fact that they have, from the War Department, detailed Colonel Dunn in charge of the Bureau of Explosives, established jointly by the co-operation with the Federal government of the American Railway Association. That this subject is intensely interesting to the State of Indiana, and comes right home to them, is borne out by the Commissioner's remarks in his address this morning where he referred to the Interstate Commerce Commission's recent bulletin, in which the ten principal railroad wrecks in the country are specified, three of the ten occurring in the State of Indiana. You are, of course, all familiar with the Federal government's work in the enforcement of the safety appliance act and the gathering of statistics and the keeping of accounts. The public is tremendously interested in this question on account of the loss of life and injury to passengers, and we have had a pretty good example this morning of to what extent the employes were interested in this question of safety appliances in the general safe-guarding of railway operation. The railroads were interested, or were last year, to the tune of about \$15,000,000 damage to equipment, rolling stock and permanent way from derailments alone. If we have any love for our country or for our fellowmen, or fellow employes, or our employers, this subject, then, with all its ghastliness, must have a tremendous interest for us. While, of course, not all the loss of life and damage to property upon railroads can be mitigated by any one man's effort, I think we all have an interest in anything that tends to diminish the number of casualties and the amount of property loss to which we are now subjected in railroad operation. One of the instrumentalities, the principal one for curing certain of our railroad troubles, is the block system. To appreciate fully the meaning and extent of block signaling, it might be well for us to take a preliminary glance at some of the conditions that affect train movements over a railroad line.

If we had a little straight railroad or line from A to C, with no switches in the track and only one train a day, about all we should need, so long as the track held together and the equipment performed its functions, would be a schedule. If we put in a switch between A and C, we immediately put in another condition. We must know whether the track, which is broken at that point, is physically intact for the passage of the wheels of the vehicle, and we have to know *that* even if there is only one train and it is a one-track railroad. We have to consider the track not

only from the standpoint of a physical structure, designed to support and carry the flanged wheels of the vehicle, but when there is more than one train on the railroad the bed becomes not only a structure for the carrying of the wheels, but it becomes a channel of communication occupied by two or more moving bodies. We know there is a law of nature that two bodies can not occupy the same space at the same time; when they try to, we call the result collision. As our railroad conditions become complicated, there arises the necessity of providing means for keeping our trains apart. The earliest method was generally by a time interval, but, of course, we all know how insufficient it is. A train may have been gone ten minutes, yet it may be that it has broken down in the cut just around the curve. So, in fact, the only method that we consider at all suitable for keeping our trains apart nowadays is the space interval, and to apply that space interval, to a railroad, of course, we divide it into blocks, a block being defined as a length of track of defined limits, the use of which by trains is controlled by a block signal, it being considered necessary to give the engineer some form of a visual indication, aside from a written one, as to whether it is proper for him to use a given block.

In any block system two things are fundamentally necessary; first, means for giving instructions or information to the engineman as to the use of his block; and second, means for assuring ourselves that the information or instructions given are correct and sufficiently complete. Now, in fact, in all block systems, the means used for indicating to the engine runner whether he can use a block or not is a fixed signal, and in these signals the indications given by the visual aspect of the signals are about the same, irrespective of the method used for insuring that the information given is correct.

I think it may be well for us for a moment to consider briefly the question of signal indications. As our situation becomes more and more complicated, of course, there are more and more conditions which we must tell the runner about. We have to indicate to him whether the track is obstructed, whether a switch is set for the side track or main track, whether the derail is open or closed, and there comes up in railroading an enormous amount of this sort of information that the runner has to have. Now, our enginemen, or most of them, have grown up gradually, being trained into receiving certain kinds of information by means of signal indication, and *then on the basis of their education and training and experience, deducting from that information that is given them, how they ought to handle their trains.* Of course, that is an indirect method. I mention this chiefly because there is now a rather strong tendency among the many railroad men who are considering this question to try and *let the signal indication give a direct command to the engine runner to do something or not to do something definite in the actual control of his train movement,* and not to try by means of signal indications to explain a lot of existing conditions and let the runner deduce what he shall do; in other words, to use a direct method of signal indication rather than the old and indirect method.

So much for the indication.

Now, as to the means of determining whether or not the indication which gives the information or instructions to the runner is correct. For this purpose there are various forms of block signal systems used. Per-

haps you might first touch on the one known as the trainstaff, little used by railroads in this country, but in other countries used quite extensively. It consists of a piece of metal of special form to be carried on the engine cab to give the right of entry into the block, and the runner must be in actual possession of this staff before he can proceed. It is used on a great many foreign roads, because of its great protective value. With its adaptation to modern and complicated working, it offers a very secure method of single track blocking, where the volume and speed of the traffic are not such as to make it undesirable. It necessitates stopping at each block station to obtain the staff, unless these are provided as on some high speed roads, a staff system, where staff receivers and staff deliverers are provided, so that trains may receive the staff at the entrance of each block without slowing up.

The block signal system most used in this country is the ordinary telegraph block, in which semaphore signals are operated directly by a signal man, upon the basis of information received by telegraph. On a road of light traffic, such a system can be installed, using existing telegraph lines, and putting in a very cheap form but serviceable form of signals, and possibly without the addition of any telegraph instruments. The chief need in the operation of the telegraph block is the use of a special and distinct telegraph wire from block to block, so no interruptions may occur to the working of the block on this wire. Such a system can be installed for about \$200 per mile and can be maintained for about \$15.00 per mile per year. On railroads where traffic is light, the present operators can be used to work the block, although the laws of this country and in many of the states, regulating the hours of labor, make it necessary in figuring on the installment of any system of this character, to figure on some increase in the force of telegraph operators to give train orders in the same ratio that they would have to increase it for the block system on account of the operation of the eight-hour law. Now, with our telegraph block system (I am touching on this, gentlemen, even though you are very familiar with it, as Commissioner Wood thought it might be desirable to define a few of these things, even if most of us already know about them), we are entirely dependent on the man, and any one man or any one of several men, making an error, may cause a train to be improperly admitted into a block. Because of man's failures in connection with the telegraph block system, attempts to improve it have been made so as to absolutely require the co-operation of two or more men to clear a signal to allow a train to enter a block. Such systems are called *controlled manual* block systems, and they are generally installed by placing an electric lock on the signal lever, having the electric lock energized by a circuit which is controlled at both ends of the block. This locking between the towers, of course, insures the proper co-operation between the two signal men, but does not insure protection against many other conditions that may arise. So in a number of cases of controlled manual block system, short track circuits are put in and which are arranged to control the electric lock, which in turn controls the operation of the signal levers. There is more variation in the degree of refinement and the degree of cost in the controlled manual block than in any other system. You can get a simple form of controlled block, without track circuit, for three or four hundred dollars a mile, and there are controlled

manual block systems in use that cost \$1,500 to \$2,000 per mile. When you increase the number of blocks, you increase the capacity of your line, but you make a tremendous increase in fixed charges, on account of the extra men required in the operation of the additional signals for each additional block.

The automatic block system is the one we find in most favor on roads that can afford it. It possesses the features of not being operated by man, but entirely by the passage of the wheels of the vehicles over the track circuits, which are generally made continuous, extending throughout the block, thus affording one very valuable form of protection in our present day railroading, which other block systems cannot give, namely, the protection against broken or removed rails; and I think you will agree with me that a good many of our rails are none too good now-a-days. A good automatic block system can be installed for a thousand dollars per mile of single track. You must understand that when you put an automatic system on a single track road, there must be some provision for meeting orders, and the installation will cost as much for a mile of single track as it would cost per mile of double track railroad. Such an automatic system can be maintained for about \$225.00 per mile a year.

Now, getting down to the State of Indiana, as compared with the United States at large, we have with all of those roads reporting to the Interstate Commerce Commission, and which embrace all of the interstate railroads of the country, about 151,000 miles, of which about forty per cent. are block signaled. In Indiana, for a like period, there were about 7,000 miles of steam railroads in the State, and about 1,500 miles of electric roads, making a total of 8,500 miles, and out of that only 1,900 miles, or about twenty-two per cent., were block signaled; so that the State of Indiana is somewhat behind the average of the country. It might be interesting to show the relative kinds of block systems in use; out of the 1,900 miles in Indiana, about 75 miles were automatic, about 1,400 manual and about 400 controlled manual. I imagine these percentages would hold good roughly throughout the country, except in the extreme eastern portions of the country, where the automatic would exceed.

The act of 1907, to which the chairman referred, provides that on those steam roads with earnings of over \$7,500 per mile, there is to be an approved block system after the first of July next, although the act gives the Commission the right to extend the time for one year. I fancy the chief questions the railroad men are asking, are these: First, is the Commission going to make us get all our lines equipped by July 1, 1909? I fancy the Commission will see fit, in using their discretionary powers, to extend this time for another year, where conditions warrant. I think they have shown themselves to be as liberal as their duty would permit. Another question that is to arise is, whether a road which is earning \$7,500 or more a year, will have to put in a block system on its little jerk-water lines, whose earnings are not anywhere near that amount. The act provides that where the earnings do not warrant this block system, the Commission has power to relieve the road from it as to that particular branch or spur. Another question that railroad men are pretty likely to ask is, what does the Commission mean by an "approved block system?" Is the Commission going to adopt a specification, hand it to us and say, "gentle-

men, here is what you must put in?" I take it they are not going to do any such thing. I conceive of no more dangerous condition that might result on a railroad of small financial resources or light traffic, than to have the Commission, or any other body, enforce the installation of an expensive automatic block system. I say "dangerous," for the reason that if the road could not afford to put it in, it could not afford to maintain it, and if not properly maintained it would not operate properly, and if not operated properly, it would soon fall into lack of respect from trainmen, and the last state of that railroad would be worse than the first. Now, what will they require? Of course, we are only guessing. But I have an idea that the Commission will not establish any elaborate specification as to what they want, for the reason that the railroads themselves know what they need better than the Commission does. The operating officer of the railroad knows what his road needs; he knows what he would like to have if he could get the money from his manager. Perhaps the Commission can help him a little. I don't think the Commission needs to make any specification. The railroads have done that for themselves. The American Railway Association has established its standard code of block signal rules, and it has laid down requisites of installation and all the data that is necessary for determining as to what should be done in the way of installation or operation of the block system. I fancy, also, that the Commission may find it desirable to permit for the present, and under the present law, the installation of a block system on a railroad whose resources are small that it would not be satisfied with a few years later when the road is more prosperous. I take it we shall find that the position of the Commission will be to see that after we have once established rules and requirements of our own, that we live up to them. The Commission, I understand, after considerable opposition, secured the passage of that portion of the transportation law which makes it a misdemeanor for any officer or railroad employe to operate his railroad contrary to his own rules, which rules are filed with the Commission. I think that it is an exceptionally important provision to make the infraction of the rules of a railroad a misdemeanor, for the reason, as we have seen before today, that anywhere from 75 to 80 per cent. of all the accidents that occur are due to negligence, which is preventable; they are due to man failure. Now, by man's failure, we do not always mean that the man did not go back far enough to flag. It is a great deal worse man failure for a superintendent to see a man not go back far enough and not call him down, and still worse on the part of a general manager if he does not organize his road in such a way that he can have clean-cut supervision and a definite placing of authority and responsibility.

In addition to this law we have just quoted, we have in Indiana other instrumentalities in the shape of laws and rules. At present we have rate laws, classification and discrimination laws, law against rebates, laws giving power to this Commission to investigate car service, demurrage rules and hours of labor laws. The State requires automatic couplers, continuous brakes, uniform height of drawbars, has clearance laws and the block system law; and, in fact, enough law to uphold the majesty of any State, to safeguard the public in its pocket, and both the public and the employes in their persons and render even more strenuous than ever the pursuit of

the elusive dividend. But in spite of all these laws the damage goes on, and two-thirds of this enormous loss is due to negligence in operation, due to the simple fact that some man or some men did not do their duty; they did not think, or they forgot, or frequently they become a victim of that American disease of taking chances. Now, what has this to do with the enforcement of the block signal law of the State by the Commission? Just this: The State is not going to make specifications as to the block system, for the reasons I have already given. The State is not going to demand the creation of a great complicated and elaborate system of block signaling. They are after safety. Now, "safety," of course, is purely a relative term. I happen to have been connected for the last two and a half years with probably the most safe and complicated signal installation that the world has seen. We have spent one million dollars covering twenty miles of territory, we paying more for block signaling per mile than would build many roads in Indiana at this time. We have every refinement known to the art and a good many that were not known to the art when we began, and yet I really wonder how much safer is the passenger on our trains than when he is riding on the London & Northwestern. I had the opportunity of working a tower on the London & Northwestern road for about an hour while once on a visit in that country. It is a pretty good piece of four-track road, and it kept me busy with their needle telegraph and levers to keep from sticking a train. When a little lull came I turned to the rosy-cheeked English signalman and said to him: "You have no electric lock on those levers. You haven't a block instrument in the place. There is no control from one cabin to another; simply this little old needle. You have no track circuit. You haven't any of the features that we consider most necessary in America. There is no reason in the world why you cannot take hold of any one of these levers and clear the signal with a train in the block." "Oh, but we wouldn't, yer know, sir." I said to him, "You may make a mistake." "No, sir, we don't." *And they don't.* That is just the difference between railroading here and in England. They don't make the mistakes that we do. Now, human nature, I believe, is a good deal the same the world over. The block system does not consist of apparatus alone. It consists of apparatus plus men. The installation and maintenance of the signal apparatus and the systems has developed in the last few years enormously until it has now reached a point where its future development will take care of itself. Gentlemen, I believe today signaling has ceased to be a mechanical or electrical or engineering problem, and has become a economic and sociological and human one, and the quicker we realize this the better. Now, while our apparatus has developed to its highest limits, we know from the results of the operation of our railroad systems that something has not developed to the highest limit, and, gentlemen, I believe you will agree with me that it is the man. How are we going to develop this man to operate our signal systems? Hadn't we better spend on him a little of the money we have spent on the apparatus because it wasn't good enough? The reason we have used signal apparatus was because it was intended to do better or more work than men did without it. The history of signaling has been this: man has failed; signal apparatus has been installed to help man; man has failed again, and more apparatus was installed; and the result is that we have gone on

and on with this thing until it has become a habit, resulting as most habits do from doing over and over again the same thing without considering whether it is the best thing to do. It is good to a certain extent. In fact, our signal apparatus today stands as a monument to our engineering skill, but the results of our railroad operations are not anywhere near commensurate with the advance in our apparatus. Now, as to our men. If, for example, we want to lift the armature of an electric lock we exert an attractive force from a magnet. If we want to lift a man from time-serving inefficiency to a clean-cut, alert and faithful performance of his duty as a signalman or any other kind of a railroad man, we must do the same thing—exert the force from the magnet. We must make the job attractive to the men. We say we are doing so. We are as far as actual pay is concerned, but the thing that makes good men on the railroads is experience, thorough training. What we want is a condition such that if we are paying a man \$60 today and someone else comes along and offers him \$65 he will refuse because he knows he is being taken care of. Under this condition we put a premium on that man's doing his work better. Now, the best incentive that can be put before any man is that if he does his work skillfully and faithfully he will not only be paid a reasonable compensation while he does it, but that he is all the time acquiring an interest in that which shall take care of him in his old age. I think the one best thing in the world to raise the standard of American railroad men is the pension system. To make a man a good railroad man he must not want to be a good man but he must know how, and if he is to know he must be taught; and to teach him there must be a system of instruction. Gentlemen, I believe that with a good system of instruction on our railroads, systematically followed up, as provided for in the laws of the State of Indiana, and above all that, a good pension system, we will have no difficulty in getting and keeping such a number of faithful, loyal and sufficiently competent employes that we can operate most any kind of a block system safely, reliably and economically. (Applause.)

A Delegate: I understand that Mr. Shane, the chief inspector of the Commission, is in the room, and it occurred to me that he may have gathered some knowledge that would be valuable to this meeting. I would be very glad to hear from Mr. Shane.

Mr. Shane spoke as follows:

Mr. Chairman, Members of the Commission and Gentlemen—I have looked forward for some time with much interest to this conference. I have felt that a great deal of good would result from it, and I am still of that opinion. In all of my railroad experience I have found that the greatest results and the greatest benefits in the operation of a road, and its maintenance were gained by interchange of ideas, by the assembling and condensing of all the talent available, and getting it into some concrete shape whereby it could be utilized. And I believe the men who wrote the law requiring this Commission to call this conference had that in view. It seems to me that it could have been the only purpose—the one object they had in mind. It also seems to me that it is an opportune time for railroad men, and they should take advantage of it.

My experience has taught me that, eliminating the Americanism, as our worthy member of the Commission has called it, there is not a man today in the State of Indiana who more earnestly desires to bring about a better condition and improvement in the maintenance of railroads in this State than the railroad man. That we err sometimes cannot be questioned. All men err. We overreach ourselves sometimes in trying to do too much, and very often too much is assigned to us, so that we cannot thoroughly master it.

Now, it is true that from my experience I gather that at least ninety per cent. of the accidents which have occurred in this State are attributable to or possibly directly traceable to man's failure. They may not be due to a violation of the rules; they may be some overt act. Accidents that occur from defective track are some man's fault, possibly, and likewise may occur from defective equipment. It is the overcrowding of some man; orders occasionally are made bad orders; frequently rules are disregarded, and more frequently men are careless. They are careless in the preservation of their own lives, and it becomes a serious problem as to how the railroad men of this State or of this country are going to overcome these defects, but that they will solve it I am confident, and there is no better time than the present to make a beginning. And I believe it ought to be an organized effort, and I believe it can only be done by the concurrent action of the railroad men with the Railroad Commission of this State. This Railroad Commission invites your co-operation; they ask your criticism, and they want the benefit of your experience in this convention, and this conference has been called for that purpose, and it is an opportune time for you to inject into all these theories practical work. I believe gentlemen, if you do not take advantage of it, you will make a mistake and you will cause more legislation that will make you more trouble and greater effort to overcome in the future than if you commence it at once. The legislation of the past has been passed without the railroad men being consulted. The railroad men were not consulted in appointing this Commission. The railroad men were never consulted except indirectly in some instances, and now you are here to be consulted. And these men are anxious to have your co-operation and desire your experience, and are anxious to do what is right and just between you and the public, and I hope you will recognize it that way, and with your efforts in harmony with theirs I feel certain great good will result. (Applause.)

The Chairman: It has been suggested that possibly some one here would like to ask Captain Ames some question. I presume Captain Ames is perfectly willing to have it done.

Mr. McKim: I take a great deal of liberty in addressing this Commission or this meeting on the subject of this conference. This is the first convention of railroad men, and we are naturally a little at sea about just what ought to be done in detail. I think we all feel the importance of the co-operation that has been suggested, but just how to arrive at it is not a certain matter in our minds. In connection with the suggestions to appoint two commit-

tees, one from the operating officials and the other from the men, arises a question of ethics to a certain extent. While the suggestion is to classify and tabulate the reports, very little good could come out of that unless the causes were arrived at, and no superintendent here, I take it, wants to criticize an accident which does not occur on his own property. Now, if there is some way to arrive, in a compromise way, under which the committee of this body can confer with the Commission and work out a method of arriving at some sort of co-operation and computation of these accidents, I think we could in that way meet what the Commission desires, and also perhaps meet the views of the delegates, and if it is in order, I will make a motion to that effect.

The Chairman: The motion to be considered by the chair now would have to be a motion to reconsider the motion of this morning, because that was determined this morning, unless it is moved to reconsider it.

Mr. McKim: Well, I would ask for a reconsideration of it.

Commissioner Wood: I want to make a suggestion in connection with Mr. McKim's remarks and motion. This committee can determine its own mode of procedure and what it can do that will best advance the interests that we are considering and trying to take care of. I am not so sure, sir, that the question of ethics comes into this, and I appreciate fully that question, but that question ought not to interfere with the question of duty. I don't think that that question need come up, and that when a committee is appointed, we have all these files over here, so that they can be looked into. Mr. McKim would look into the reports from his own road and the other roads, and I am inclined to the opinion that he would find the accidents very much alike occurring on all of the roads. Now, then, cannot that committee—we are not attempting to define the duty of that committee here today, as Mr. McKim says it is new, and we are feeling our way along slowly so as not to do any harm of any kind—don't you think, Mr. McKim and you gentlemen?—and I want to say, I don't want to flatter you gentlemen, but it has been suggested by another gentleman to me that you are the best legislature that ever sat in this house—don't you think you can get together and work out your mode of procedure?

The people of the state have asked you to come up here and look into this matter. You can do it better than any one else on earth. You cannot do it here today. You have got to go back into

your offices. Now, then, don't you believe, Mr. McKim, that aided by our chief inspector, whom you have seen here today, a railroad man of long experience, that that committee can get together and prescribe what shall be done? This convention has not submitted any hard and fast rules about this matter. If you feel that there is a question of ethics involved, you can consider that as you go on. I trust that these committees will be appointed, and then let the committees determine what shall be done and how much shall be done. But let us do it. How much we have been instructed; how much you gentlemen have enjoyed Captain Ames' speech here! I trust you will let this thing go on. Of course, you can have it some other way, if you wish to, but let us have some progress with it. I trust you will proceed, as has been suggested, but if not, of course, the Commission will acquiesce in the views of the convention.

The Chairman: Mr. McKim, do you make that a motion to reconsider?

Mr. McKim: I am afraid we are too much at sea in this convention to get along.

The Chairman: Let us see where we are at, just for a moment. The motion was made this morning, as I understand it, that a committee of three from the superintendents and railroad officials here represented, and a committee of three from the railroad trainmen and the chief inspector of the Commission, constituting a committee of seven, be appointed to act together to classify these accidents and report back to the Commission. That motion prevailed this morning. Now, Mr. McKim moves that the motion by which these committees were to be appointed be reconsidered. Now, that is the proposition. What do you propose to do, now; you make another motion, Mr. McKim?

Mr. McKim: I move, Mr. Chairman, to make it of wider scope. This committee was suggested for a definite purpose, and that was a committee to confer with the Indiana Commission with reference to these accidents and recommend to this body later on, with the concurrence of the Commission, what ought to be done in that direction.

The Chairman: In other words, your motion, in fact, will make the Commission really a part of this entire committee and confer with this committee?

Commissioner Wood: I want to get in harmony with Mr. McKim, if they desire it that way. I made the motion this morning. Now, Mr. McKim, you say that you wish to enlarge the power of the committee. Now, the statute devolves upon you the duty of investigating these accident reports. You cannot get away from it.

Mr. McKim: The Commission ought to tabulate and classify them.

The Chairman: I think they have been classified to a certain extent. My own judgment is that these accidents should be classified by the inspectors of the Commission and the office force, and when they are classified they should be placed before whatever body this convention shall designate.

Mr. McKim: This body does not want to do the undigested work that some of the legislative bodies have done.

Commissioner Wood: Mr. Chairman, I hope that motion will prevail, so we may get together on it.

The Chairman: Then, gentlemen, the question is on Mr. McKim's motion to reconsider. As many as favor that suggestion will say "aye"; contrary, "no." The "ayes" have it, and we are just where we started. Now, Mr. McKim, what was your motion?

Mr. McKim: My motion is that a committee composed of superintendents or representatives of the railroads, operating men, and, if you please, of the working men of the road, be appointed, and that, in conference with the Commission and the inspectors, they formulate a report to be submitted to this body for working out this problem and co-operating with the Commission.

The Chairman: And the committees to be appointed in the way as was moved this morning?

Commissioner Wood: Mr. Chairman, I favor that motion.

Motion carried.

The Chairman: Now, gentlemen, if there is no further discussion along this line, we will adjourn to the Supreme Court room, where we will listen to an address by Colonel Dunn, who is the head of the Government Bureau for the Safe Transportation of Explosives, which address will be illustrated with views. We will proceed to the Supreme Court room at once.

SUPREME COURT ROOM, 3:00 P. M.

Colonel B. W. Dunn was introduced by the Chairman, and delivered an address on the power subject of "The Safe Transportation of Explosives by Rail." His remarks follow:

For the purpose of illustrating the destructive power of explosives in general, the important characteristic of the more dangerous ones and the methods adopted by the Bureau of Explosives to promote their safe transportation by rail, Colonel Dunn exhibited about sixty lantern slides and used them as texts for instructive remarks.

These illustrations included:

Dynamite cartridges, black and smokeless powder cartridges and methods of packing for shipment.

Drawings and photographs to show good and bad methods of loading packages in cars.

Blank forms for the education of employes in the requirements of the regulations and for reporting their violations of them.

Examples of destructive effects of intentional and accidental explosions, recoil and rupture of heavy guns, land and water mines, explosions of magazines, etc.

At the conclusion of his exhibition of slides and remarks thereon Colonel Dunn closed his lecture with the following remarks:

Now, gentlemen, we have had many useful suggestions today on the general subject of co-operation of railway employes and others interested in the performance of railway duties, and this matter of the handling of explosives in transportation is one of the strongest illustrations that can be brought forward to be discussed in that connection. A little over two years ago, in the spring of 1905, the condition of affairs in this country with reference to this matter was as follows:

There was only one railroad that had given much attention to regulations to govern the transportation of explosives. There had been many serious explosions, resulting in great loss of life and damage to property. No organized effort had been made by the railroads as a whole to prevent it. There was available a central organization, the American Railway Association, which represented all railroads; and such an organization was the first essential necessary to accomplish anything in this direction. You have for your worthy purposes provided a similar organization today by the appointment of your joint committee. A committee of the American Railway Association was authorized in April, 1905, to prepare regulations for the transportation of explosives over all roads, but the committee had not met when that disastrous accident occurred at Harrisburg. The committee worked diligently throughout the summer of 1905, and brought to the association in the fall regulations that were approved by the association. Many officials assumed that by prescribing these regulations they had taken all necessary action. Experience showed, however, that nothing had really been accomplished in changing practices. When our inspectors visited railway stations later, asked for these regulations and questioned agents to find out what they had done towards carrying them out, it developed that in some cases the agents did not know whether they had re-

ceived them or not. One agent wanted to know what kind of paper they were printed on; he had received many circulars and found that some were good for cleaning lamp chimneys and some were not; if the one in question was useful for this purpose it was probable that he had not kept it. If not, he might have it in a box where he kept similar circulars.

As stated above, the publishing of rules is a necessary step, but it does not accomplish results. Enforcement does not depend upon the man who prepares the rules, but depends upon the co-operation of the men who apply them. To secure this enforcement of the regulations for the transportation of explosives the Bureau of Explosives has filled a long-felt want. The chairman of the committee of the American Railway Association, over a year after the regulations were prescribed by all roads, said that a central organization was necessary to enforce them, and to meet this demand the bureau was formed. It maintains a laboratory with experts who work to recognize the good points and point out the bad ones in samples of explosives. A force of traveling inspectors is on duty to see whether the rules are being carried out. It was thought at first that only the factories of explosives would have to be taken into consideration; but we soon found that the factories were not the greatest sources of danger. The storage magazines throughout the country are of more importance since the material in them is more liable to become dangerous through deterioration. The most useful work is to prevent dangerous material getting into traffic. By lantern slides you have had illustrated the methods adopted to educate railway employes in their duties and to check their violations of the rules.

Now, these are the lines upon which the bureau is still working. We haven't the slightest doubt that it is doing a great deal to secure the enforcement of rules that without its action would be in many cases entirely disregarded.

The work of this bureau suggests a general thought in connection with what you have been talking about today.

It is believed that at some time in the future, distant perhaps, railway officials will find the experience of this bureau useful to them in the enforcement of other sets of rules. I should not be surprised to see the American Railway Association organize a general inspection service for all roads to promote the enforcement of all rules. No reason is seen why general methods found useful for the uniform enforcement of one set of rules on all roads should not be applicable in some degree to the enforcement of others. By a general organization the cost of individual roads would be decreased while the efficiency of the inspection service would be increased.

The keynote of your discussion today has been co-operation, and you have made strong appeals to railway employes to obey rules in the interests of public safety. Temporary obedience may come from sentiment, but the best foundation for safety is a well-established habit of obedience. To form this habit we must adopt every useful agency, including education as to possible results of violations and appeals to sentiment. The most useful agency, however, is efficient inspection service. The employe or other person must know that each and every violation of rules on his part is liable to be discovered; *and that when discovered it will be reported to the detriment of his record.*

The Bureau of Explosives has appreciated thoroughly the value of co-operation, and has worked diligently to secure it not only from competing shippers and manufacturers of explosives and other dangerous articles, but from the different branches of railway administration and from such a powerful organization as the National Association of Railway Commissioners.

Some of you may not thoroughly appreciate how much the public welfare depends upon the safe transportation of explosives and other dangerous articles. Over five hundred million pounds of explosives are shipped annually in the United States, and from 600 to 700 cars are loaded daily, wholly or in part, with explosives. Many of the cars are literally moving magazines that must be carried where the railways lead and into the heart of densely populated regions. Every public spirited citizen should be more than willing to contribute in any way possible to the safe transportation of this material. Railway officials, through competent agents employed for the purpose, are working earnestly and *voluntarily* to secure this safety, and I request most earnestly the support and assistance of each and every one of you.

Commissioner Wood: I move that the thanks of this convention shall be tendered to Colonel Dunn and Captain Ames for the interesting and useful addresses with which they have favored us here today.

Motion seconded and carried unanimously.

The Chairman: The convention is adjourned.

At the conclusion of the convention the following committees were appointed by the railroad and trainmen representatives:

Railroad Managers—

- J. C. Hagerty, Superintendent B. & O. S.-W. R. R. Company, Cincinnati, Ohio.
- M. E. Sebree, Superintendent Southern Indiana Railway Company, Terre Haute, Indiana.
- F. H. Wilson, Superintendent L. S. & M. S. Ry. Company, Chicago, Illinois.

Trainmen—

- A. F. King, Engineer, Wabash R. R. Co., Peru, Indiana.
- T. C. Laughlin, Conductor, So. Ry. Co., New Albany, Indiana.
- F. L. Howard, Conductor, C., I. & S. R. R. Co., Kankakee, Illinois.

For the Commission—

- A. Shane, Chief Inspector, Indianapolis, Indiana.

BUREAU FOR THE SAFE TRANSPORTATION OF EXPLOSIVES AND OTHER
DANGEROUS ARTICLES.

OFFICE OF THE CHIEF INSPECTOR,
24 Park Place.

NEW YORK, November 23, 1908.

Judge W. J. Wood, Railroad Commission of Indiana, Indianapolis, Ind.:

My Dear Judge—I am very much gratified to note your kind words in your favor of the 18th inst.

I was very favorably impressed by the spirit that originated the conference attended by me and that seemed to pervade all who attended it. The best results in a matter of this kind must come from true co-operation, and I see no better method to obtain this than the one followed by you.

It is hoped that your committee appointed at this meeting to go further into this matter will appreciate, as I believe it will, the fact that sentiment alone can never secure a continual and uniform enforcement of rules. This enforcement will, in my estimation, depend more upon habit. Employes must not be allowed to exercise their own judgment as to when rules can be neglected. I recall two marked cases where employes, working under my direction in manufacturing dangerous ammunition, lost their lives as the result of neglecting to obey rules. In each instance they had obeyed these rules day after day for more than a year. The strongest possible inducement not to exercise judgment was present, since the employe knew, or ought to have known, that his own life was at stake.

I think our best plan, which is to perfect rules, thoroughly educate employes in their requirements, appeal to every agent, including their conscience and sentiment, to promote a habit of obedience; and follow all this by a properly organized inspection service that will check a sufficient number of employes to produce upon the whole the impression that if they attempt to depart from strict obedience they are liable at any time to be detected and punished. The success that we have had in enforcing rules for handling explosives is a case in point. We attempt to follow this plan, and it is believed that we have secured almost a revolution in railway practices in this respect.

Very sincerely yours,

B. W. DUNN,
Chief Inspector.

The following report by said committee was thereafter filed with the Commission.

To the Honorable Railroad Commission of Indiana:

Gentlemen—Your committee, appointed for the purpose of canvassing accident reports made by the several railroads to the Railroad Commission and classifying the same and making such recommendations as may be found necessary, in compliance with a call made by the Chief Inspector of the Railroad Commission, met at the State House in Indianapolis, Indiana, on November 23, 1908, at 10 o'clock a. m. and organized by appointing Mr

A. Shane as chairman of the meeting and F. H. Wilson, superintendent Lake Shore & Michigan Southern Railway Company, as secretary. Your committee was composed of the following:

J. C. Hagerty, Supt. B. & O. S. W. R. R., Cincinnati, Ohio.
 M. E. Sebree, Supt. Southern Indiana, Terre Haute, Ind.
 F. L. Howard, Conductor C., I. & S., 274 5th avenue, Kankakee, Ill.
 A. F. King, Eng. Wabash Railroad, 183 W. 6th street, Peru, Ind.
 A. Shane, Chief Inspector R. R. Commission, of Indianapolis, Ind.
 F. H. Wilson, Supt. L. S. & M. S. Ry. Co., Chicago, Ill.
 Theo. C. Laughlin, Conductor So. Ry., 703 W. Main street, New Albany, Ind.

We submit the following:

Personal Injuries to Employees Not Due to Train Accidents—

Due to faulty judgment of the injured employe (trainmen) .	236
Due to faulty judgment of trainmen other than those injured	71
Due to faulty judgment of injured employe other than trainmen	164
Due to faulty judgment of employes other than trainmen, causing injury to their fellow employe.....	19
Unavoidable accidents	340
Unknown	20
Error in judgment.....	1
Violation of rules, trainmen injured.....	4
Violation of rules, other employes than trainmen injured.....	6
Employes injured by outsiders.....	2
Defective track	4
Defective equipment	38
Caused by unknown parties.....	6
Carelessness of electric line employes.....	1
Acts of God.....	2

Personal Injuries to Passengers Not Due to Train Accidents—

Due to passengers' own carelessness.....	54
Due to employes.....	10
Unavoidable	8
Due to defective equipment.....	6
Unknown	2
Due to carelessness of electric line employes.....	1
Acts of God.....	2
Caused by unknown persons.....	3
Intoxication of passenger.....	1

Injuries to Electric Line Employees and Employees of Express, News and Pullman Companies—

Due to their own carelessness.....	6
Unavoidable	1
Due to carelessness of railroad employes.....	1

Personal injury to trespassers not caused by train accidents..... 331

Personal injuries at highway crossings.....	92
Three of these cases were suicides.	
Train Accidents in Which No One Was Injured—	
Due to violation of rules.....	27
Due to faulty judgment of employes.....	58
Due to defective equipment	44
Unknown	9
Error in judgment.....	2
Unavoidable	17
Due to defective track and broken rails.....	14
Due to ice on track.....	1

<p>Your committee, in going through the reports, finds some railroads report a great many accidents which, in our judgment, should not be reported at all, for the reason that the accidents are of a very minor nature and are such that no action can be taken to prevent them occurring. We would like to call your attention to some of such cases:</p> <p>Head of spike flew off, hitting section man.</p> <p>Wind blew cab door open, striking engineman on knee.</p> <p>Fireman slightly injured by shaker bar slipping off.</p> <p>Section men piling up ties, tie falling on foot of man.</p> <p>Car repairer washing coach window, ladder slipping.</p> <p>Cinder in eye.</p> <p>Hand being cut by lamp globe breaking while cleaning.</p> <p>Section man putting pick in tie in attempting to pull tie out, pick slipped, causing man to fall.</p> <p>Section man slipped and cut himself while mowing weeds.</p> <p>Carpenter injured while using adz.</p> <p>Baggage master cut hand on rough edge of trunk.</p> <p>Section men dropping rail on foot.</p>	

Conductor on his way to office slipped on street car rail off company's right-of-way.

Crossing flagman run over by team.

Carpenter pulling nail out of plank stepped on another nail.

Bridgeman falling off bridge.

Section man struck by nut being broken off bolt.

Brakeman cutting hose, knife slipped.

Section man injured, pick coming off handle.

Section man injured, unloading rail.

Locomotive fireman had hand caught in shop door.

Car repairer repairing brake which was set, thrown off car when letting brake off.

Brakeman struck by lightning while standing at switch.

We also find a great many accident reports of employes being injured by slipping and falling, and their ankles being sprained by stepping on a small stone, cinders, etc. This class of accidents occurs to people in all walks of life.

Referring to the large number of accidents to employes due to their own carelessness, a great many of these accidents are of a minor nature and are such that could not be prevented by discipline; in fact, a number of them are caused by overzealousness.

Referring to the large number of accidents to employes under the head of "Unavoidable," a great many of such cases were purely of an accidental nature—men slipping and turning their ankles, either by stepping on a stone or jumping off the train; minor injuries to freight handlers and local freight crews handling freight—and include such accidents as are unavoidable so far as railroad operation is concerned.

Such accidents as men being struck by lightning, washouts due to cloudburst, we have classified under the head of "Acts of God."

We wish particularly to call your attention to the large number of accidents to trespassers for which the railroads are in no way responsible. Your committee feels that the same respect should be given railroad property as to the property of private individuals. Good results would be obtained if it were possible to interest the city and town officials in this question; otherwise the railroads will be utterly helpless in bringing about a reformation.

Referring to the number of accidents on highway crossings, this classification includes accidents of every kind and character, such as automobiles running at a high rate of speed over crossings, the public disregarding crossing gates, crossing flagmen and other warning indications, citizens of unsound mind or with defective hearing or sight, and usually by persons who fail to appreciate the importance of exercising great care at such places, and your committee find that they are unable to offer any recommendations that will improve this situation.

The committee adjourned until 2 o'clock p. m., Monday, November 30, 1908.

Indianapolis, Ind., November 23, 1908.

The committee met pursuant to adjournment at 2 o'clock p. m., with all members present. On motion the former resolutions were amended as follows:

To the last paragraph of the preceding report of the committee, with reference to accidents on highway crossings, the following paragraph was added:

"We would recommend that no highway or street be opened across any steam or electric railroad, or that no steam or electric railroad be built across another steam or electric railroad at grade without an order from the Railroad Commission, after a full hearing of all interested parties."

To the paragraph of the preceding report referring to accidents to employees due to their own carelessness, the following amendment was made:

"We find that a great many accidents are due to the fact that men are, to a certain degree, careless for their own safety in taking risks which are not sanctioned by their employers, and that often obstructions are left in yards, over which men will fall, and that if diligent efforts were made by all interested a great many of these accidents could be avoided."

In addition to the above, the following recommendation was made:

"We find that quite a number of accidents occurred for the reasons that lateral clearances were not of a uniform nature, and we would recommend to the Commission that they communicate with the American Railway Association with reference to establishing a uniform minimum clearance for various classes of structures, with a view of having the railroads of the State of Indiana adopt the same and the Railroad Commission assist in enforcing them."

Respectfully submitted,

J. C. HAGERTY,
M. E. SEBREE,
F. L. HOWARD,
A. F. KING,
THEO. C. LAUGHLIN,
F. H. WILSON, Secretary.
A. SHANE, Chairman.

Indianapolis, Ind., November 30, 1908.

Accident Bulletin No. 3

for 1907, pp. 371-388.)

Showing Collisions and Derailment of Trains
and Casualties to Persons During Jan-
uary, February and March,
1908

ACCIDENT BULLETIN No. 3.

RAILROAD ACCIDENTS IN THE STATE OF INDIANA DURING THE THREE MONTHS ENDING MARCH 31, 1908.

PASSENGERS.

During the first quarter of our inspection there were 8 passengers killed on both steam and interurban roads, and during the second quarter there were 5 killed on these roads. We have to report for this quarter only 2 passengers killed; one on a steam railroad and one on an interurban line. The report made to us of the passenger killed on the steam railroad states that this passenger was about to board train, which was approaching station, and walked between express truck and track without paying any attention to the train and was struck by a pilot beam of engine and fatally injured. It seems, therefore, that the carrier may not be altogether, if at all, to blame. In the case of the passenger killed on the electric railroad the accident was wholly unnecessary and inexcusable, as head-on collisions nearly always are. In this case there was a head collision on the main track, but we only propose here to call attention to the comparison:

	1st Qr.	2d Qr.	3d Qr.
Passengers killed	8	5	2

Thus there seems to be some result from the greater care taken since the Railroad Commission has been inspecting the lines and giving publicity to the facts, and this conclusion is supported by the total fatalities (see table No. 9) of 83 deaths in this quarter to be compared with 99 deaths the second quarter and 107 deaths the first quarter. A like favorable comparison is shown in the total injured, namely, first quarter 401, second quarter 478, third quarter 369.

TRESPASSERS.

In congratulating the carriers and their men on this better showing it is desirable in the same connection to call attention to accidents for which carriers and employes are not responsible, and for which they are generally not to be blamed. Of the total of 74 persons killed this quarter on or about the steam railroads, while the

number of passengers decreased, namely 6 first quarter, 3 second quarter and only 1 third quarter, and the number of deaths of employes (steam railroads) decreased, namely, 29 first quarter, 29 second quarter and 23 third quarter, and fatal casualties on highways decreased, namely, 28 first quarter, 15 second quarter and 11 third quarter, we find an actual increase in the deaths of trespassers on steam railroads, namely, 36 first quarter, 38 second quarter and 39 third quarter; and hence it appears that for nearly 50 per cent. of the entire fatalities on the steam railroads these trespassers were to blame.

Here again is the condition just as strongly presented in our first bulletins of loss of life resulting from the unauthorized use of railway tracks by persons walking on the same correctly defined in law, in common parlance, and in fact as trespassers.

And surely the direct consequence is the general duty to take steps to stop these fatalities. Our observations, reports of inspectors, and of the carriers all show that the death roll of trespassers will continue to increase until the power of the law, backed by strong public pressure and sentiment, is directed against this fatal nuisance. The railroads are public highways, indeed, but not highways for footmen, nor for horse carriages, nor automobiles, nor any conveyance or transportation except that provided by the carriers, whose charters from the sovereign state give to them the sole right to operate on these roads, and if the state asserts its supervisory power over its public highways, as the most enlightened nations have always done, as to the tolls to be charged, and especially as to the accommodation and safety of the public, is it not also obligatory in principle and necessary in every day practice that the State shall protect those whom it has invested with a portion of its own sovereignty in the operation of these public roads against trespassers of all kinds, whether on the tracks or on the cars. The tramp on the track and bridge, and the hobo on the cars is the unholy terror of trainmen, who have all they can possibly do to bear in mind their train orders and to handle their engines and cars and passengers, without being called on to take care of persons walking on the tracks or trespassing in or outside of the cars, these persons being often desperadoes, and frequently drunk. If this Commission in behalf of the public shall require, as it intends to do where possible, the best safety appliances, engines, cars and tracks, and the highest degree of care, energy and competency in the men, clearly it should also use the power of the State where it can be made available to protect the carriers and employes alike against this constant invasion of property and personal rights.

This is a most serious matter of great public concern; not only a fearful loss of life, but a constant menace to the convenience and safety and pleasure of lawful travelers and an illegal and unjust burden on the carrier. On a portion of one single railroad line, namely, the Pennsylvania Lines West of Pittsburgh, during the last decade and a half the following accidents, if properly called accidents, to trespassers took place:

PENNSYLVANIA LINES WEST OF PITTSBURGH.

ACCIDENTS TO TRESPASSERS FROM 1891 TO 1907 INCLUSIVE.

<i>Year.</i>	<i>Deaths.</i>	<i>Injured.</i>	<i>Total.</i>

	<hr/> 3,103	<hr/> 3,842	<hr/> 6,945

The Secretary of the Commission will be directed to send a copy of this bulletin to the leading newspapers of the State. This Commission desires to respectfully request the notation and publication by the press of the facts, figures and recommendation here given. The Commission is now taking steps to collate all the statute laws and practices of foreign countries and this country with a view of recommending to the governor the best and most practical legislation that we can devise to prevent this great destruction of life. It is as bad as an epidemic or the use of poisonous drugs and foods. Unlike an epidemic or temporary distress or casualty, it continues for every season and every month and every week of every year. In sending out these facts and figures to the press we desire to have the influence of that powerful agency in informing and educating our people as to the absolute necessity and the great wisdom of the proposed legislation.

TRAVELERS ON HIGHWAYS.

This has also been a matter of especial interest to this Commission. Separation of grades has been urged and warning signals recommended to all the carriers. The prompt acquiescence in the recommendation of this Commission to put up warning signals by the principal railroad companies of the State, although there is no statute law on this subject in Indiana, is gratifying. And there is also a commendable disposition to improve such warning signals as are now used by making them more conspicuous and by indicating the great peril to travelers by such words as "DANGER" and "STOP. LOOK. LISTEN." As to this class of accidents, we are able to report in this bulletin, table No. 3, a notable improvement, namely:

	1st Qr.	2d Qr.	3d Qr.
Struck on crossings.....	44	33	23
Deaths	31	22	16

We extract from a special report on this subject of Inspector Matthews to the Commission, and respectfully commend the suggestions to the carriers and press, that crossings shall be flagged by train crews when trains are waiting on sidings, and that the newspapers shall call attention, especially in bad weather, to the great speed of trains, the number of grade crossings and the imminent and continual danger. Our inspector's report is as follows:

"During the first quarter of 1908 your inspectors have visited five of the public highways where there were eight persons killed. At Porter, Indiana, there were two persons killed by one train at the same time by the Pere Marquette Railroad, ages 77 and 62 years. At Bennett's Switch there were three persons killed by one train at the same time, by the Indiana Union Traction Company, ages all under 25 years.

"The crossing at Porter, Indiana, where the two persons were killed, is not obstructed under any natural conditions or by any buildings being constructed close to the track, but at the time these persons were killed there was a freight train standing on the siding with engine about thirty feet away from public highway waiting for the fast passenger train to go, which was the train that killed parties on highway. It might be possible that this engine was wasting steam over pressure, and if this was the case and the weather being cold the parties were wrapped up to keep warm they could not hear the approaching train. I think that under conditions of this kind, or where crossing is cut while freight trains are

in siding waiting for passenger trains, and there is no protection by flagman that some of the train crew should protect the crossing while it is cut. When a crossing is cut the view is somewhat obstructed to travelers on public highways, and they should have this protection.

“At Bennett’s Switch, where the three persons were killed at one time and by same train, the view is slightly obstructed, but by approaching this crossing carefully it is not a dangerous crossing. The three persons killed at this crossing were all under the age of 25 years, and resided not more than fifty yards from the track of the Indiana Union Traction Company; the weather was very cold and the parties were wrapped up to keep warm and could not hear the approaching train.

“Of the sixteen persons killed during this quarter, there were twelve under the age of 45 and four over the age of 60, and only in one case was there defective sight or hearing. You can see from this that the public, of middle age, do not approach these crossings with enough care.

“The other three crossings visited by your inspectors were not obstructed at all, giving good view to travelers on the public highways.

“Travelers of late years have enclosed themselves in vehicles with glass storm curtains and side curtains, which cuts them off from the sound of approaching trains, also from the sound of the whistle. Your inspectors in going over the State have taken notice of the whistling of engineers and motormen when approaching public crossings, and I am glad to state that the whistles are properly sounded—loud, long and distinct.

“I think as an extra precaution to preventing grade crossing accidents, there should be printed in the principal papers of the State and county, at least once a week, or when there is stormy weather approaching, a warning to the general public to approach railroad crossings carefully and look out for trains. Most of the persons killed this quarter were killed during cold and stormy weather.”

EMPLOYEES.

There is also a better showing in table No. 4 (steam railroads) as to employes killed and injured but we invite the careful attention of officers and men to this table, and especially to the following extracts from it:

	1st Qr.	2d Qr.	3d Qr.
Deaths	29	29	23
Coupling and uncoupling.....	20	21	10
Collisions	31	61	17
Derailments	18	28	14
Getting on and off trains.....	35	17	25
Overhead obstructions	3	1	0
Side obstructions	8	5	8
Falling from cars.....	28	19	39

With reference to falling from cars, our Inspector has reported to the Commission as follows:

"It is also my wish that you take some notice of the several trainmen injured this quarter by grabirons and handholds pulling off. This is, of course, a penalty defect and is closely watched by your inspectors, but I believe if you will mention it in your quarterly bulletin the railroad companies will take steps to give these grabirons and handholds much more attention."

This matter is most earnestly recommended to the attention of the proper officers of the carriers.

Another matter called to our attention by our inspector is, we think, important, and is as follows:

"Another accident, which occurred on one of the principal lines in the State on February 21st, happened on account of king pin of tender working up and allowing the engine to separate far enough from the tender to let the fireman fall through and under the train, the result being his instant death. Your inspectors have looked over several engines of the different roads, and they find very few of these engines that have cotter keys in king pins; in all cases where your inspectors have talked with master mechanics or roundhouse foremen they are of the opinion that king pins that are not bolted in should have the cotter keys and that they should be watched and kept in good repair."

On the general subject of such casualties we desire to quote from Haynes on Restrictive Railway Legislation in his chapter concerning railroad operation as follows:

"The casualties in connection with train movements are more directly to be associated with negligence of employes or administrative mismanagement. To call these occurrences accidents is,

to a great degree, a misnomer, for the most of them occur from personal inattention or recklessness, from defect in track or equipment or from non-observance of rules by employes, and are, therefore, not to be regarded as fortuitous or unavoidable. Either the employes on British railways are more careful or are better protected from casualties in train service than ours are. On the British railways in 1901 out of 575,000 employes one in 1,127 was killed, and one in 135 injured. In the United States in 1903, out of 1,312,000 employes, one in 384 was killed and one in 40 injured. Railroad employes in this country, therefore, run about four times greater risk of being killed and about three times greater of being injured than the employes on British railways."

The lesson taught by these observations and figures of Mr. Haynes, a practical American railroad man of experience and ability, is greater care and vigilance from the highest officer to the humblest employe. A man who is reckless of his own life has no business in railway service. A man who is careless of his fellow employes is little better than a criminal at best. Such a man, officer or employe, should keep in his mind the picture of the widow and the orphan who may be left without support by reason of his fault and carelessness. Men in railway service should shun and avoid a careless officer or employe as they would such a man if he were attempting to attend to his important duties while he was drunk. A higher standard of efficiency should be insisted on. The men know better than anybody else who it is in daily work and service who shirks his duty or who is careless and indifferent in the work he attempts to do. All the writers on this subject, all the practical railroad men who have watched railway operation in this country insist that one of the greatest causes of danger is the American spirit of recklessness. When this is fully understood and carefully avoided we may expect the list of employes killed and maimed to grow constantly smaller and the distress prevailing in the country on this account to be relieved.

ACCIDENT REPORTS.

By reference to table No. 1 it will be noted that all the roads in the State have reported this quarter except four small lines, with an aggregate mileage of less than 100 miles.

CARS INSPECTED AND PENALTY DEFECTS.

Number of cars inspected during quarter.....	4,796
Number of penalty defects during quarter.....	117
Number of M. C. B. defects during quarter.....	122

Accident Bulletin No. 4

Showing Collisions and Derailments of Trains
and Casualties to Persons During April,
May and June, 1908

ACCIDENT BULLETIN No. 4.

RAILROAD ACCIDENTS IN THE STATE OF INDIANA DURING THE THREE MONTHS ENDING JUNE 30, 1908.

PASSENGERS.

No passengers, either on steam or interurban railroads, were killed in Indiana for the quarter ending June 30, 1908. This result we desire to emphasize by the following comparative statement:

PASSENGERS—FATAL ACCIDENTS.

	1st Qr.	2d Qr.	3d Qr.	4th Qr.	Total.
Steam railroads	6	3	1	0	10
Electric railroads	2	2	1	0	5
					<hr/> 15

It is but just when we can present such a showing to commend this good railroading, and to commend the officers and men operating railroads in this state to whose care and efficiency this result is due. The Indiana Railroad Commission does not hesitate to accord this credit, and begs leave also in congratulating railroad men on this result and in commending them to the public to call attention to the fact that we commenced our supervising and inspecting work of the physical roads one year ago, that during the first quarter eight passengers were killed, the second five, the third two and that now we are happy in making up the record, to write it clear of fatal accidents to passengers for the entire quarter. So far as we are entitled to do so, we wish to share, ourselves and our inspectors, in the credit for these gratifying results.

EMPLOYEES.

As to employes, so far as the electric railroads are concerned, we can present as good a showing. Indeed, no employe has been killed on the interurban railroads for two quarters, six months. It is deplorable that a better showing on the steam railroads can not be made for those men whose care and efficiency, as we have just pointed out, has so greatly provided for the safety of passengers for the last three months. The statement is:

EMPLOYEES—FATAL ACCIDENTS.

	1st Qr.	2d Qr.	3d Qr.	4th Qr.	Total.
Steam railroads	29	29	23	24	105
Electric railroads	2	3	0	0	5
					<hr/> 110

We have just carefully examined, with the aid of our inspectors, the accident reports of fatal injuries to employes. "Stepping in front of switch engine," "Leaning out of cab," "Run over by engine," "Falling between cars," "Caught between cars," "Thrown under train," "Falling from engine," "Collision," "Derailment;" the same causes that have taken off so many men. We have the same caution to always urge of the greatest possible care to prevent these accidents. And especially it strikes our attention as to the number of men hurt or killed by falling from trains. Two brakemen were killed during the quarter by falling from the pilot of road engines. The practice is not permitted by the Pennsylvania, and perhaps some of the other roads, of the brakeman going out of the cab window to the pilot in order to throw the switch. The application of the air is liable at any time to make a sudden jolt that might throw a man either from the engine or the top of cars. We think that rules and bulletins should be strict on this subject, and that men should exercise the greatest care in moving at exposed points on or about the trains when they are in motion.

TRAVELERS ON HIGHWAYS.

FATAL ACCIDENTS.

	1st Qr.	2d Qr.	3d Qr.	4th Qr.	Total.
Steam railroads	28	15	11	16	70
Electric railroads	3	7	5	8	23
					<hr/> 93

There is no cause for congratulation in this showing. Here is where we are all to blame; here is a condition involving an unnecessary and continuous loss of life in a highly civilized country. Denounced recently by the Indiana Railroad Commission as "THE GREAT AMERICAN CRIME," the aptness of the definition has met with instant recognition in the public press, and it is to be hoped in the public conscience. Separation of the grades is the only adequate remedy. It is to be noted that practical, progressive work on this line has been undertaken by five Railroad Commissions, and

that formal presentation of this matter will be provided and made to the next General Assemblies of many states. To the wisdom of these legislatures, aided by full information now being compiled, will be submitted:

First. That no more grade crossings shall be constructed. How is it possible to eliminate grade crossings if new railroads and highways make one or more new grade crossings for each one that is separated?

Second. Elimination of present grade crossings; so many to each 100 miles of each railroad each year. The companies and the State, county or city to pay such proportion of the cost as has been found best and practical in the legislation of other states and as the general assemblies may determine to be right. This will be, of course, the work of more than one generation, but it should be commenced now, so that at some time all grades will be separated, and besides every grade crossing taken away means one or more lives saved.

In this connection we desire to praise the Big Four Railway Company for taking out twenty-three crossings and putting in concrete bridges and subways instead, in the reconstruction work done by them between Indianapolis and Terre Haute.

Meanwhile, while grades are being separated all other proper steps to protect lives, especially at dangerous crossings, should be taken. We mention again that in every county in this State the county as well as the city newspapers should warn the people of the great danger of highway crossings at the present rate of speed of the railroad cars and trains. These companies have nearly all adopted our recommendation for warning signals. And we trust that they will soon appear at every crossing in the State and that the word "Danger," in red, will be impressed on the minds of the people so that they will not attempt to cross the railroads without the most painstaking examination. Indeed, we think that where there is more than one traveler in a vehicle or vehicles that it would be best for one of them, in most cases, to alight and to walk to the track and give a signal to come on if there is no train approaching.

Attention is called also to a novel and important action of this Commission in this behalf. Proceedings have been commenced in one of the southern counties to lay out a highway across two parallel railroads. There is a highway crossing within 100 feet of the proposed new crossing, and the new highway instead of crossing the railroads at right angle was laid at such an angle that it occupied these railroads and their rights of way for 1,000 feet. Obviously such a crossing was dangerous, and unnecessary, inasmuch as the old crossing could be used. The Commission, when on appeal this

proceeding had reached the circuit court, presented to that court its petition praying that inasmuch as it was charged with supervising the manner in which railroads were operated with reference to the security of the public and employes it should be allowed to become a party to this case to object to such a dangerous crossing. The Commission filed a brief and made an oral argument and the court allowed the intervening petition to be filed. We think if, under existing statutes, the Commission can not intervene in cases of this kind for the protection of the public its powers should be enlarged.

TRESPASSERS.

DEATHS.

	1st Qr.	2d Qr.	3d Qr.	4th Qr.	Total.
Steam railroads	36	38	39	48	161
Electric railroads	3	3	3	4	13
					<hr/> 174

Observing our custom of discriminating sharply between accidents for which railroad companies are responsible and those for which they are not, it will be noted that in our statement above we have left out the word "Accidents," and have substituted "Deaths." Often, in fact, these casualties look like *suicide*, and always there is a consciousness when considering them, that there are no adequate laws to prevent trespassing and the consequent loss of life, and that there is a curious apathy, if not hostility, on the part of some police officers to prevent trespassing. To illustrate what a large percentage of the casualties on railroads occur from grade crossing killings and from trespassing, it will be noted that the death list increased this quarter only on account of highway crossings and trespassing. On the steam railroads the total death list last quarter was 74, while this quarter it is 88; but of the 14 in excess, 9 were trespassers and 5 were killed on the highway, so that these causes account for the increase. And on the electric railroads there were 3 more fatalities altogether than last quarter, but there were 8 highway killings this quarter against 5 last quarter, and 4 trespassers killed this quarter against 3 last quarter, so that leaving out deaths on highway crossings and of trespassers, there would have been a decrease instead of an increase.

For the four quarters, the year ending June 30, 1908, the showing is grewsome enough—deaths, 391. But there are some signs of encouragement. For the corresponding time a year ago, there were

killed in this State 58 passengers, this year 15 passengers. And the totals have decreased, namely, 412 last year, 391 this year. But, sad to say, there is an increase in the death roll of employes. This should invite our closest and most careful attention. And, of course, there is an increase in the fatal accidents to travelers on the highways, as there will always be until the grades are separated; and there is an increase in the death list of trespassers, as there will always be until they are kept from going to their death by trespassing on the railroad tracks.

Accident Bulletin No. 5

Showing Collisions and Derailments of Trains
and Casualties to Persons During July,
August and September, 1908

ACCIDENT BULLETIN No. 5.

RAILROAD ACCIDENTS IN THE STATE OF INDIANA DURING THE THREE MONTHS ENDING SEPTEMBER 30, 1908.

PASSENGERS.

No passengers, either on steam or interurban railroads, were killed in Indiana for the quarter ending June 30, 1908. (Last Accident Bulletin, No. 4, p. 4.)

We could make this report again for this bulletin if it were not for the fact that on one of all the steam and interurban railroads in this State three passengers were killed during this quarter. That is to say, *that on all the steam and interurban railroads operating in the State of Indiana, except one, no passengers were killed for the quarter ending September 30, 1908.*

The railroad referred to is one of the best equipped railroads in the State. It has automatic block signals, splendid track and equipment, carries great numbers of passengers, and, so far as its officers and men are concerned, they seem generally to be up to the average standard of railroad men.

The first of these three accidents to passengers occurred July 29th, when, as reported to us, a passenger jumped off a train on the opposite side from the station, and in front of a passenger train moving twenty miles an hour on the opposite track. We investigated this accident and found that there was a full train crew, consisting of engineer, fireman, conductor, flagman and three collectors, or brakemen. Our Chief Inspector reports as to this accident as follows:

"The station and station grounds are all on the north side of the L. S. & M. S. tracks. The west-bound train on which Mr. Bonner went to Pine was an accommodation train without vestibule ends. Mr. Bonner alighted from this train while yet in motion, before it had made station stop, and on the wrong side of the train between the two main tracks at a point marked X in blue on attached print. He ran east a few feet and onto the west-bound track, when he was struck and killed. It has developed since the accident occurred that Mr. Bonner was not at work as he was supposed to be, at least was not employed by the people that it was thought at the time employed him. In fact, there was no evidence before the coroner to show that he was employed at the time at all, and it is assumed that he was looking for employment, there being a great many men

employed on this immediate section on account of the reconstruction and relocation of the tracks and other general improvements that are being made on account of and in connection with the building up of the city of Gary, but he was unquestionably in the habit of riding on this train, and was familiar with all conditions. In the opinion of your inspector the man had ceased to be a passenger at the time he was killed. The railroad company may have been remiss in not having their trains that operate on double track so equipped that they could prevent passengers, either willfully or carelessly, alighting from a train on the side opposite the other main. All the evidence went to show, and everything indicated, that Bonner, when he alighted from the train, intended to go south, for what purpose it is not definitely known, but evidently he had no intention of going to the railroad company's depot or to the village of Pine."

The second of these accidents occurred August 23d. As reported to us, the station was duly announced and a passenger got up and put on his coat, resumed his seat, remained seated until after the train had started, when he went to the platform and jumped off, fracturing his skull. On these facts as stated it does not appear that the railroad company was to blame.

The third accident occurred September 14th at Chesterton, a rear-end collision, in which one passenger on an excursion train was killed and 111 injured. This accident was inexcusable and wholly unnecessary. The Commission has made careful personal investigation by all of its members of the facts concerning it, and will have to find and report that the engineer of the train which ran into the excursion train and the flagman of the excursion train were guilty of gross neglect in performing their duties, and that the accident could have easily been avoided had these men obeyed the rules of the company. Accidents of this kind are not only to be greatly deplored but bitterly condemned, and public sentiment is growing to the point that some more effective means will be taken to prevent their recurrence.

EMPLOYES.

This class of fatalities has always excited the closest attention of the Indiana Railroad Commission. There can be nothing more awful, even when the nature of the work is dangerous in itself, than a man gone suddenly to his death by inevitable accident, without fault on his part, or by fault of his employer or his fellow-workman. And surely any Christian aggregation of men, known as a nation or a state, is greatly desirous of doing all in its power to prevent such fatalities.

In this bulletin comparison will be made with our bulletin No. 1, the corresponding period one year ago, as follows:

RESULTS.

	Bulletin No. 1, July, August and Septem- ber, 1907.	Bulletin No. 5, July, August and Septem- ber, 1908.	Decrease.
Deaths	29	24	5
Loss of limbs	6	2	4
Loss of fingers or toes.....	4	1	3
Spinal injuries	4	..	4
Fractures or dislocations.....	32	29	3
Sprains	45	68	*23
Cuts and bruises.....	144	173	*29
Miscellaneous	25	..	25

It will be noted that there is a distinct improvement, although not as great as desirable. There are 5 deaths less than the quarter one year ago; 6 lost their limbs in that quarter, 2 this quarter; there are 4 spinal injuries that quarter, none this; 32 fractures that quarter, 29 this quarter; 45 sprains that quarter, 68 now; 25 miscellaneous then, none now. (Cuts and bruises and miscellaneous are generally slight injuries.) There were 144 cuts and bruises that quarter against 173 this quarter.

And so, also, considering the increase of business, which means more men employed, the comparisons for the quarter just preceding April, May and June, 1908, are not discouraging. In that quarter there were 24 deaths and 24 this quarter. In that quarter loss of limbs, 2; the same this quarter. In that quarter spinal injuries, 1; none this quarter. But of the minor injuries there were more this quarter than in the preceding quarter. In this quarter one employe is reported as being caught in a frog, or switch. His injury was very slight, and, indeed, injuries from this cause are very rare. Since the act of Congress providing for automatic coupling, it is not generally necessary for switchmen to go on the track to couple or uncouple, and so far as our reports show, no employe has been killed or injured in this State for one year in this way. There is, indeed, a question about the cause of the death of one conductor last January, but we have had this case carefully examined and are in doubt about it. At all events, the Railroad Commission and its inspectors took this question up directly after the organization of the inspection department, with the companies themselves, especially as to the metallic blocking of all new frogs and switches, and from the reports of inspectors and recommendations and orders of this Commission, our Chief Inspector, who is a track man, and very careful and accurate about matters of this

*Increase.

kind, advises that 90 per cent. of the frogs in this State are blocked. It is the purpose of the Commission to continue its work on this line until it will be impossible that any accident shall occur from this cause. But, as said above, there is other work to be done for the safety of employes, much more important, and without which they would be much more liable to injury and death.

As to causes, the table No. 4 shows that in coupling and uncoupling there is a decrease of 6 from a year ago, an increase of 4 compared with last preceding quarter. A majority of these injuries are slight, and many of them were caused by the horizontal handle of the uncoupling lever, which catches the hand between this lever and the side of the adjoining car. The Commission took this up with the carriers more than a year ago (see Accident Bulletin No. 1, p. 14), and we understand that since then as fast as cars go to the shop this handle is either taken off or a new apparatus put on.

Three trainmen were injured this quarter by overhead obstructions. Two of these were by low bridges inside the cities and towns. The statute for the elevation of bridges does not apply to bridges within the limits of cities or towns. The other case was a slight injury to Brakeman Robinson on the Wabash Railroad at New Paris, who was struck by a low electric trolley wire. On investigation we found that this trolley wire was 21 feet and 10½ inches above the rail, a clearance greater than that prescribed by the statute for bridges, and a height which will clear in almost every case. On this general subject we may observe for the satisfaction of the trainmen in this State that the elevation of overhead and the removal of lateral obstructions by the operation of an act prepared by this Commission, and by our constant inspection and recommendation, has been one of the great works of the Commission. Injuries still occur, but very rarely, from these causes, but bridge after bridge and lateral structures one after the other are constantly being put in shape until we expect the fatalities from these causes will cease in the State of Indiana.

GRADE CROSSINGS.—TRAVELERS ON THE HIGHWAYS.

We have said so much on this subject in prior bulletins, and these fatalities appear to us to be generally so unnecessary, that we give here only the figures. During the time of these accident bulletins there were killed in the State of Indiana at highway grade crossings as follows:

	1st Qr.	2d Qr.	3d Qr.	4th Qr.	5th Qr.	Total.
Steam railroads	28	15	11	16	25	95
Electric railroads	3	7	5	8	5	28
Total						123

These figures justify the denunciation of this slaughter as "The Great American Crime." The increase of 6 deaths for this quarter emphasizes the necessity of taking such steps as we have heretofore indicated and are working out, with reference to this great evil.

·TRESPASSERS.

And so also as to trespassers. As we have heretofore pointed out, the railroad companies are not responsible. The law compels the railroad companies to operate their trains on their tracks. The law allows, at least, if tracks are not posted, men, women and children to use these most dangerous tracks for thoroughfares, and so the slaughter naturally and inevitably takes place. Our last quarterly bulletin showed 50 killed on the tracks, but this bulletin will show 67, an addition of 17 more human lives. It is to be hoped that when the next general assembly shall convene it will pass an act to abate this loss of life and to provide also, if possible, some effective way for its enforcement.

CAR INSPECTION.

Car inspection for the last quarter shows number of cars inspected during quarter 7,319, number of penalty defects during quarter 152, number of M. C. B. defects during quarter 155. The past quarter for the months of July, August and September, 1908, cars inspected 6,668, penalty defects 115, M. C. B. defects 60.

Warnings at Highway Grade Crossings.

The statutory material on this subject is herewith presented in the three following groups:

Requirements as to bell and whistle signals.

Requirements as to flagmen, gates or automatic crossing signals.

Requirements as to sign boards.

BELL AND WHISTLE.

In all the states excepting Colorado, Louisiana, North Carolina, Washington, Wyoming, Maryland, Oregon and Pennsylvania there are statutes of state-wide application requiring locomotives to be supplied with bells and whistles and requiring the use of these as signals for certain distance before crossing any highway at grade. The references are as follows, with certain notes as to exceptions:

Alabama. Code 1907, §5473.

Arizona. R. S. 1901, C. C. §869; P. C. §355, makes failure a misdemeanor.

Arkansas. Dig. 1904, §6595.

California. Code 1906, C. C. §486; P. C. §390, makes failure a misdemeanor.

Connecticut. Gen. St. 1902, §3787; §3790 provides that such signals may be required at other than grade crossings.

Delaware. R. C. 1893, p. 987; required unless crossing is watched by watchman or gates.

Florida. Gen. St. 1906, §2841, in cities.

Georgia. Code 1895, C. C. §2222; §2224 provides for the use of the bell only in cities.

Idaho. C. C. 1901, §2190.

Illinois. R. S. 1905, p. 1578.

Iowa. Code 1897, §2072.

Kansas. Gen. St. 1901, §1323.

Kentucky. St. 1903, §786.

Maine. Acts 1905, §94. May be required when the crossing is not at grade.

Massachusetts. Acts 1906, p. 554.

Michigan. C. L. 1897, §6292. May be omitted in cities and villages unless required by local authorities.

Minnesota. R. L. 1905, §5001. "Except in cities."

Mississippi. Code 1906, §4045.

- Missouri. An. St. 1906, §1102.
- Montana. Code 1895. C. C. §908. P. C. §689 makes failure a misdemeanor.
- Nebraska. Acts 1905, p. 281.
- Nevada. C. L. 1900, §1012.
- New Hampshire. St. 1901, p. 516. May be omitted in cities and villages where approved by railroad commissioners.
- New Jersey. Acts 1903, p. 664.
- New Mexico. St. 1897, §3859.
- New York. P. C. §421, "Except in cities."
- North Dakota. R. S. 1905, §4295.
- Ohio. R. S. 1905, §5303.
- Rhode Island. G. L. 1896, p. 598.
- South Carolina. Code 1902, §2132.
- South Dakota. R. C. 1903, p. 658.
- Tennessee. Code 1896, §1574.
- Texas. St. 1897, §4507.
- Utah. C. L. 1907, §447.
- Vermont. St. 1906, §4431.
- Virginia. Code 1904, p. 676.
- West Virginia. Code 1906, §2358.
- Wisconsin. Acts 1907, pp. 491-2. May be omitted in cities and villages where there are gates or flagmen.

FLAGMEN, GATES, AUTOMATIC SIGNALS.

The statutory requirements regarding these safety devices are so often contained in a single section that they are combined in this compilation, the few exceptions being shown by the annotations:

Connecticut. Gen. St. 1902, §3888. May be required by Railroad Commission.

Delaware. Laws, Vol. XXI, 1898-99, p. 482. Local authorities may require gates or flagmen.

Illinois. R. S. 1905, p. 1583. Local authorities may require flagmen.

Iowa. Code 1897, §769. Cities over 5,000 may require gates.

Kentucky. St. 1903, §774. Railroad Commission may require within a city or town, or within one mile of the limits thereof, gates or flagmen.

Maine. R. S. 1903, p. 524. May be required by Railroad Commission. Page 540, unless provided in cities and villages speed shall not exceed six miles per hour.

Maryland. Code 1904, p. 658. County commissioners may require.

Massachusetts. Acts 1906, p. 556. Railroad Commission may require.

Michigan. C. D. 1897, §2681. Flagmen or gates where required by Railroad Commissioners.

Minnesota. Acts 1907, p. 553. May be required in cities or villages by Railroad Commission after hearing on complaint.

Mississippi. Code 1906, §4896. Railroad Commission may require gates.

New Jersey. Acts 1903, p. 664. Court of Chancery may order on petition. P. 657, in cities gates will relieve from speed limitations.

New York. C. & G. Gen. Laws 1902, p. 3084. Flagmen or gates may be ordered by supreme or county court upon petition; relieve from speed limit.

Ohio. R. S. 1905, §307-8. Railroad Commissioners may require.

Oregon. Acts 1907, p. 84. Railroad Commissioners may order after complaint.

Pennsylvania. P. & Dig. Supp. 1901, p. 812. Second-class cities may regulate use of flagmen or gates.

Rhode Island. Acts 1900, §784. Railroad Commissioner may order.

South Carolina. Code 1902, §2142. Railroad Commissioners may require flagmen.

Utah. C. L. 1907, §206, cl. 35. City council may require flagmen. §206xl, city council may require gates.

Vermont. St. 1906, §4433. Railroad Commissioneers may order.

Virginia. Code 1904, p. 683. Corporation Commissioners may order flagmen or gates within a two-mile limit outside of cities and towns. P. 686, council may require flagmen or gates in cities or towns.

Wisconsin. Laws 1907, p. 491-2. If maintained in cities or villages trains may exceed 12 miles speed limit.

SIGN-BOARDS.

These provisions are here set forth in sufficient detail for each state to show such requirements as are adopted with regard to size of letters, color, nature of inscription, and extent of use. In all cases there is the general provision that the boards shall be inscribed on both sides and elevated on posts or otherwise sufficiently to allow free passage and to be clearly seen along the roadways.

Alabama. Code 1907, §5475. Sign with large and distinct letters.

Arizona. R. S. 1901, C. C. §879. Capital letters 9 inches in length, "Railroad crossing, look out for the cars."

Arkansas. Dig. 1904, §6596. Capital letters 9 inches in length, "Railroad crossing, look out for the cars while the bell rings or the whistle sounds." Not required in cities or villages unless ordered by the local street authorities.

Connecticut. Gen. St. 1902, §3785. Required where there is no gate. Of such form as the Railroad Commissioner may approve.

Delaware. Laws Vol. XXI (1898-99), p. 482. Capital letters 5 inches in length, "Railroad crossing." Not required in cities and towns unless ordered by the local authorities.

Florida. Gen. St. 1906, §2841. Large sign-boards at or near crossing. Inscription in large letters, "Look out for the cars."

Illinois. R. S. 1905, p. 1578. Capital letters 9 inches in length. "Railroad crossing." Or, "Look out for the cars." Does not apply to cities or towns unless required by local authorities.

Iowa. Code 1897, §2054. Sign with large and distinct letters.

Kansas. Gen. St. 1901, §1324. Capital letters, "Look out for the cars." Does not apply to cities or towns unless required by local authorities.

Kentucky. St. 1903, §773. Capital letters 5 inches in length, "Railroad crossing." Does not apply to cities or towns unless required by local authorities.

Maine. Acts 1905, p. 94. "Railroad crossing." Distinctly painted in letters plainly legible.

Maryland. Code 1904, p. 649. Sign with large and distinct letters.

Massachusetts. Acts 1906, p. 555. Capital letters 9 inches in length, "Railroad crossing; look out for the engine," or such as approved by the Railroad Commission.

Michigan. C. L. 1897, §6292. Printed in 12-inch letters, "Railroad crossing." Not required in cities and villages unless ordered by local authorities or Railroad Commissioners.

Minnesota. R. L. 1905, §1994. A proper and conspicuous sign.

Mississippi. Code 1906, §4050. "Look out for the locomotive," or "Railroad crossing."

Missouri. An. St. 1906, §1103. Required where there are no gates. Letters 9 inches in length. "Railroad crossing."

New Hampshire. St. 1901, p. 516. Required where there are no gates or flagmen. Such as ordered by Railroad Commissioners.

New Jersey. Acts 1903, p. 664. Conspicuous sign. "Look out for the locomotive." Not required in cities and towns unless ordered by local authorities.

New York. C. & G. Gen. Laws 1902, p. 3084. Such as approved by Railroad Commissioners (now by Public Service Commission). May be omitted as ordered in cities and villages.

North Dakota. R. S. 1905, §4294. Suitable signs of caution. Painted with black Roman or black letters on white background. Letters 8 inches in length and proportionately broad. Posts 15 feet high.

Ohio. R. S. 1905, §5287. Large and distinct letters.

Oklahoma. The territorial statutes which remain in force until superseded were as follows. References are to sections in statutes of 1903:

Bell and Whistle. §1057. By §2365 punishment is provided for failure.

Sign-boards. §1055. Suitable signs of caution. Painted in black Roman or block letters on white background. "Railroad crossing, look out for the cars." Letters 8 inches high and proportionately broad. Posts 15 feet high. By §1056 after 30 days' failure the county commissioners may erect at expense of railroad.

Rhode Island. G. L. 1896, p. 599. Suitable sign-board upon each side of crossing. Black capital letters 9 inches in length. "Railroad crossing; stop, look and listen." To be placed under supervision of Railroad Commissioner.

South Carolina. Code 1902, §2133. Printed in large letters. "Railroad crossing." Does not apply to cities and towns unless required by local street officials.

South Dakota. R. C. 1903, p. 658. Suitable signs of caution. Painted with black roman or block letters on white background, "Railroad crossing; look out for the cars." Letters 8 inches in length and proportionately broad. Posts 15 feet high.

Tennessee. Code 1896, §1574. "Look out for the cars when you hear the whistle or bell." At the expense of the county.

Texas. St. 1897, §4506. Sign with large and distinct letters.

Vermont. St. 1906, §4430. Warning boards such as approved by Railroad Commissioners.

Virginia. Code 1904, p. 683. Capital letters 5 inches in length: "Railroad crossing." Not required in cities and towns unless ordered by local authorities.

West Virginia. Code 1906, §3359. Across each public road or street. Legible capital letters. "Railroad crossing, look out for the locomotive."

Wisconsin. Laws 1907, pp. 491-2. Large sign-board painted with large letters. "Look out for the cars." Must be visible on highway 100 feet distant.

Note.—In connection with this general subject, grade crossing warnings, the following two recent statutes are of interest:

Connecticut. Acts 1907, 224, empowers Railroad Commission to require removal of obstructions to clear view at crossings of highways.

Massachusetts. Acts 1906, p. 556, §154. Provides for removal of standing wood which obscures crossings.

REPORT OF COMMITTEE ON GRADE CROSSINGS.

To the Railroad Commission of Michigan, Illinois, Wisconsin, Ohio and Indiana:

Your Committee on Grade Crossings respectfully report:

The subject of the separation of highway and railroad crossings is of such transcendent importance as to require the best thought and the most skillful advice possible. No one appreciates this importance more than the members of your committee. The frequent reports of fatalities at grade crossings are constant reminders of the dangers already existing, which are multiplying year by year as travel on the highways and traffic on the railways increase. We take it that it is unnecessary to dwell upon the necessity for the separation of these grades. The important question is, how to accomplish the separation.

The chief obstacle in the separation of grades is the enormous expense attending the same. The elimination of grade crossings is as expensive as it is desirable. It contributes alike to the safety and convenience of the railroads and the public. It likewise corrects the mistakes made when the railroads were constructed, for which the railroads, counties, cities and villages are alike responsible. Recognizing this joint responsibility of error, such statutes as we now have in some of the states divide the expense of elimination between the railroads and the municipality or county. Each state has some legislation upon the subject, but after all, the matter is largely in the hands of the railroads. Where provision is made for the expense of elimination of grades, the major portion of such expense is imposed upon the railroads, with usually the municipality or county paying the smaller proportion. In some states, notably the Eastern States, the state from its treasury defrays a part of

the expense. In these Eastern States where the state participates in the expense of changing grades much good has been accomplished, as the railroads are required each year to separate a certain number of crossings. As an indication of the expense incurred by the separation of grades we may recite the fact that in New Hampshire, with only eleven hundred and ninety-one miles of railway, within the period of sixteen years three hundred and seventy-six dangerous crossings have been abolished at a combined expense of \$24,310,000.00. This includes the elevation of tracks, for long distances in some instances. In that commonwealth the expense is assessed upon the state, the municipality, and the railroad companies, the latter defraying sixty-five per centum and the state and municipalities thirty-five per centum. In New York State a sum of money is appropriated each year, out of which the state pays its fixed proportion of the cost of eliminating such grade crossings as are abolished during that year. We believe the amount appropriated is about two hundred thousand dollars annually. In congested localities, such as the larger cities, there is a very urgent demand for the separation of grades. The frequent stumbling block in the way of these improvements is the expense entailed upon the municipality, while in other instances the railroads object on account of the heavy proportion to be borne by them.

Safety to travel upon the streets and highways requires that, where possible, there should be a separation of grades. How shall this be accomplished? In the first place, such legislation should be secured as will not impose too heavy a burden upon any of the parties to be assessed. The railroad commission should be clothed with the necessary authority to hear and determine applications for a separation of grades, and they should fix the division of the expense within certain limits. Where the street or highway to be improved is occupied by an electric line, such electric line should be made to bear a just proportion of the expense. It is here suggested that the commission, in determining the necessity for such separation and the making of its order in that respect, should, within proper limits, apportion the cost to the interested parties. We made this recommendation because the benefits to each of the parties are not always equal. A fixed proportion of the expense, therefore, would not always be the most just and equitable. By leaving to the discretion of the commission the apportionment of the cost these benefits may be ascertained as the basis for proper and equitable division of the expense. The best reason for conferring this authority upon the railroad commission is that it would be far removed from local influences, which too often affect such matters, and again, from the very nature of its business, has the practical knowledge and the means for acquiring the same which is necessary to a proper and equitable determination of the questions involved.

We do not attempt in this report to discuss the statutes of the states here represented, and for that reason do not make specific recommendations as to the proper amendments which may be necessary to insure more speed in the separation of grades. As before indicated, two things are necessary: First, that the division of expense shall be so made as not to make the burden too great upon any of the parties; and, second, a statute requiring railroads to separate a certain percentage of grades each year.

The problem is to get rid of existing crossings. Future crossings at grade should not be tolerated except where it is a physical impossibility

to avoid it. The power to determine the question of future crossings of highways with steam and electric roads should also be conferred upon the railroad commission for the same reasons as above assigned.

Statistics show that about 1,000 persons are killed annually at grade crossings in this country. In addition, of course, there are a great many seriously injured. In some of the states these fatalities amount to 20 per cent. of the total deaths on or about the railroads.

These useless fatalities have been properly characterized as THE Great American Crime.

We repeat and emphasize the suggestion made above that grade crossings, either railroads with each other or of railroads and highways, should not be permitted in the future. The laying out and construction of all such crossings should be under the supervision and direction of the railroad commissions.

We append to this report a compilation of the statutes of the states on this subject which may be of use in the preparation of proposed legislation.

Respectfully submitted,

W. J. WOOD,
B. A. ECKHART,
J. C. MORRIS,
G. W. DICKINSON,
Committee.

GRADE CROSSINGS.

(From Proceedings of the North Central Association.)

INTRODUCTION.

This compilation of statutes on the subjects of Separation of Grade Crossings of Railways and Public Highways and the Installation of Interlocking Devices at Railroad Crossings is divided into three parts:

1. Separation of Grade Crossings of steam railroads, electric and steam railroads, electric railways, and all railroads and public highways.
2. States having statutes allowing or requiring interlocking devices.
3. States having special statutes concerning electric railways with regard to separation of grade crossings and interlocking devices.

As a basis for this work the compilation prepared by the United States Inter-State Commerce Commission, Dec. 15, 1902, in House Document, Vol. 73, Part 4, Appendix G, Table 6, Part B, pages 210-217, which covers the statutory provisions in each State to 1902. From 1902 to the present, Oct. 31, 1908, the *acts of each

*NOTE.—Date of latest statutes consulted is printed below the name of the state.

State have been searched and all States except Louisiana and Washington have statutes on some phase of these questions. The third part of this compilation is not treated in the Inter-State Commerce Commission's report, but the statutes have been consulted beginning with the last Revised Statutes to the present.

Nov. 6, 1908—E. A. F.

SEPARATION OF GRADE CROSSINGS.

Alabama, P. C. '07, Sec. 1296—City council or other governing body in city
1907 over 35,000 have full power and authority to require railroad company to construct and maintain viaducts, bridges and tunnels or parts, * * * and their approaches, over, along or under their tracks, at their own expense.

Sec. 1298—When viaduct, bridge or tunnel crosses over or passes under tracks of two or more railroads * * * power to apportion cost equitably among different railroads.

Arkansas, Acts '05:36—Railroad may construct and maintain bridge at
1905 public crossings.

California, C. C. '06, Sec. 472—Railroad may cross other railroad or high-
1907 way under, over or at grade, * * * as may be most expedient.

C. C. P. '06, Sec. 1240, Subd. 5—No railroad main track crossing outside the limits of any incorporated town, city, or city and county shall be at grade, unless such party * * * shall, at its own sole cost and expense, protect such crossing by the construction, operation and maintenance of an interlocking plant with suitable signals and derails, but either party may insist upon a separation of grades * * * cost divided among railroad companies concerned.

Colorado, R. S., Supp. '05, Sec. 4500a, Subd. 15—City Council may require
1907 railroad to construct, own expense, bridges and other approaches and viaducts or other conveniences at public crossings or over their tracks * * * when same crosses tracks of several railroad companies * * * build their proportion.

Connecticut, R. S. '01, Sec. 3708—All highway crossings to be other than
1907 at grade; except with special permission of commission; railroad
must make and maintain.

Sec. 3709—No steam railroad shall hereafter be constructed
across the tracks of any electric, cable or horse railway at grade.

Sec. 3710—New highways shall pass over or under railroad;
railroad to construct—one-half cost by railroad, one-half by town,
city or borough.

Connecticut (Cont'd.), R. S. '01, Sec. 3713, 3716—On petition of railroad
company or local authorities, commission may order a separation
of highway grade crossing.

Sec. 3714—Commission may order separation of grade crossing.

Sec. 3719—Railroad must maintain all structures over or
under their tracks at any highway crossing.

Delaware, L. '01-'03, p. 326, Sec. 84—Whenever practicable, crossing at
1907 grade of any railroad shall be avoided, but if not practicable, the
crossing may be at grade * * * it shall be the duty of the
corporation whose railroad track or tracks cross the tracks of such
other railroad company at its own expense to erect and maintain
signal tower and signal * * * with an electric warning at-
tachment, also to maintain interlocking system, with derailing
switches. Practicability to be determined by the chancellor.

L. '03, p. 343, Sec. 116—Duty of every railroad corporation or-
ganized under this act to construct and keep in repair good and
sufficient bridges under, over or across any public highway. Rail-
road crossings in incorporated towns and cities to be not at grade
except with permission of local authorities.

Florida, G. S. '06, Sec. 2809—Railroad may cross highway or may carry it
1907 over or under its tracks as may be most expedient for public good.

Georgia, R. S. '95, Sec. 2219—Railroad may cross each other at grade
1907 or not.

Idaho, C. C. '01, Sec. 2170—May cross other railroad tracks at grade.
1907

C. C. '01, Sec. 2172—Highway crossings may be at, above or
below grade.

Illinois, R. S. '05, p. 1578, Sec. 71—Railroad must construct and maintain
1907 crossings and approaches.

Indiana, R. S. '08, Sec. 5227—If railroad cannot agree upon manner of
1908 crossing, circuit court may order it at grade or not.

Sec. 5553c—Railroad corporations agreeing to separate cross-
ings at grade may apply to the commission who shall determine the
manner of the crossing, apportion all charges and expenses for
building and maintenance.

Sec. 5553d—On petition of one railroad the commission shall
determine whether grades shall be separated, determine the man-
ner and apportion the expense of building and maintenance.

Sec. 5249—When railroad crosses highway latter may be car-
ried under or over track as may be most expedient.

Iowa, Supp. '07 to Code '97, Sec. 773—Proportion of cost of viaduct to railroad companies to be made by council, one-half cost repairs borne by city, other half by railroad company or divide between railroad companies and city.

Iowa, Code '97, Sec. 770, p. 328—Cities having a population of 7,000 or over shall have power to require any railroad company * * * to erect, construct, reconstruct and maintain * * * any viaducts upon or along such streets, over or under such tracks, * * * shall not be required until Board of Railroad Commissioners determine same to be necessary, * * * must also approve plans.

Sec. 2063—In case one railroad company desires to cross tracks of another railroad company at grade * * * court, upon application of railroad company whose tracks are to be crossed, must make such order as is necessary to secure public safety and preservation of properties of the roads, * * * prescribe terms of maintenance.

Sec. 2020—Right to cross over or under any railroad, etc.

Kentucky, G. L. '03, Sec. 767, p. 420—Railroad Commission to determine manner of railroad crossing over another company's tracks.

Louisiana—No data.

1904

Maine, R. S. '03, Sec. 65, p. 523—New railroad to pass either over or under public highway unless railroad commissioners authorize it at grade.

Sec. 68, p. 523—Railroad may cross either over or under another railroad.

Sec. 73-74, p. 524-25—Railroad commissioners to determine manner one railroad of any kind to cross another, * * * to apportion the expense.

R. S. '03:29, Sec. 23—New highway may cross railroad track over or under, * * * but on petition of city authorities or railroad commission to determine whether it shall cross at grade.

Maryland, G. L. '04, Art. 23, Sec. 294, p. 661—Railroad may change public highway at grade to cross either over or under its tracks, whenever it considers it dangerous, at its own expense, with consent of municipal authorities or county commissioners.

P. G. L. '04, Art. 23, Sec. 283, p. 658—Where crossing is considered dangerous by county commissioners outside corporate limit of cities, it is their duty to order flagmen or electric signals at such crossing, or railroad shall change said grade crossing to pass over or under.

P. G. L. '04, Art. 23, Sec. 286, p. 659—Every railroad may cross another at, under or over grade, but said railroad crossing must maintain signal station and keep watchman.

Massachusetts, L. '06:463, pt. 2, Sec. 105, p. 542—On petition of railroad corporation commission may determine manner of separation of grade crossing.

Sec. 160, p. 542—Railroad cannot cross another at grade except by permission of railroad commission.

Sec. 107, p. 543—Highway crossings to be other than at grade except by permission of county commissioners and railroad commissioners; county commissioners shall determine manner of crossing.

Sec. 111, p. 544—Highways cannot cross railroads at level except by consent of railway commissioners.

L. '07:463, pt. 1, Sec. 29, p. 491—Upon petition of authorities of a town or city or directors of railway corporation, street railway corporation or governor and council, the superior court, after notice by petitioners to railway commissioners, may appoint three commissioners to determine the necessity of altering highway grades; Attorney General, when instructed by Governor, may petition court to appoint commissioners.

Sec. 34—Commission appointed to decide manner of crossing, apportion the costs * * * railroad 65 per cent., street railway 15 per cent., commonwealth, city or town 20 per cent.

Michigan, L. '07:54, Sec. 9, p. 57—Every railroad corporation may cross
1907 highways or other railroads at grade or not.

L. '05:127, Sec. 1, p. 175—Commissioner of railroads must approve manner of crossing of any street railway across railway and vice versa.

L. '05:128, Sec. 7, p. 177—Board to consist of railroad commissioner, Attorney General and Secretary of State to determine crossing of one railway across another, if at grade, the safeguards to be provided.

Minnesota, R. L. '05, Sec. 2915—Any railroad company has the right to
1907 cross another; district court to appoint commissioners to determine place and manner of crossing if railroad companies disagree.

Mississippi, Code '06, Sec. 4096—Right to cross any railroad.
1906

Code '06, Sec. 4053—Railroad must keep non-grade crossings in good repair.

Missouri, L. '05, p. 106—Where railroad is ten feet or more higher or
1907 lower than surface of street or road railroad shall be required by overseer of public road or authority of such city of the 4th class or ten or more citizens to construct a suitable passage and roadway under or across its tracks. * * * After thirty days crossing may be constructed and damages collected *double* the cost.

Nebraska, L. '05:14, Sec. 128—Cities 100,000 population or more, to require
1907 any railroad company or companies to erect and maintain any viaducts along or upon such streets over or under such track or tracks as deemed necessary for public safety.

L. '05:20, subd. 84, p. 233—Cities 20,000-40,000 population, * * * mayor and council shall have power to require railway or railway companies to erect and maintain viaducts * * * over or under such track or tracks, including approaches.

R. S. '03, Sec. 9971—Any railway may cross over or under any road, railroad, etc.

R. S. '03, Sec. 10027—Railroad must keep non-grade crossings in repair.

R. S. '03, Sec. 10025—Any railway may raise or lower highways to avoid grade crossings.

Nevada, C. L. '00, Sec. 990—Railway may cross another railway or highway
1907 at grade or not.

New Hampshire, R. S. '01, p. 516, Sec. 2—Railroad must not cross highways or other railroads at grade without consent of commission
1907 nor may highway be laid out across railroad at grade without consent of commission.

R. S. '01, p. 517, Sec. 13—Railroad commissioners may authorize railroad company to raise or lower highway at any crossing.

R. S. '01, p. 518, Sec. 14—Railroad commissioners may require railroad company to raise or lower highway at any crossing.

R. L. '01, p. 51, Sec. 15—Towns by vote may require railroad to separate grades, but railroad may appeal to commission.

New Jersey, L. '06:301, p. 663—Street or highway crossings in any town or
1908 city shall not be at grade except with consent of common council.

New York, C. & G., G. L. '06, Sec. 12, p. 3067—Commission, one a practical
1907 engineer, to determine whether new railroad crossings shall be at grade or not.

C. & G., G. L., vol. 4, p. 1247—Includes street railways.

C. & G., G. L. '06, p. 3109, Sec. 60—New crossings over highway to be not at grade, save with permission of commission which shall also determine whether crossings shall be above or below.

Sec. 61—Commission to determine manner of crossing when street is laid across railway.

New York (cont'd), C. & G., G. L. '06, p. 3109, Sec. 62-66—Commission may on its own motion, or on petition of local authorities, order a separation of grades.

C. & G., G. L. '06, v. 4, p. 1260, Sec. 64—Framework and abutments of overhead bridge to be kept in repair by railway company; approaches by municipality. If underneath railroad to maintain subway and municipality the approaches.

North Carolina, R. L. '05, Sec. 2567—If railroad cannot agree as to expense and manner of crossing, court to appoint commissioners to
1907 determine.

Sec. 2568—Railroads may cross highways at grade or not.

Sec. 2700—Railroad must maintain all crossings not at grade.

North Dakota, R. C. '05, Sec. 4266, pt. 5—Crossings may be constructed at
1907 grade or not.

R. C. '05, Sec. 4293—Bridges at non-grade crossings must be kept in repair by railway.

R. L. '05, Sec. 4275—Railroad may erect when necessary bridge or culvert over any highway.

Ohio, R. S. '05, Sec. 5322-23—Any municipal corporation may require
1908 railroad company to abolish its grade crossings * * * If railroad company and municipality disagree, may be submitted to circuit court to decide necessity. Court to apportion the cost.

Sec. 5325—Height of viaducts to be not less than 21 feet from top of rail and never less than 16 feet three inches when circuit court lowers same.

Supp. R. S. '05, Sec. 5329—Railroad to pay one-half the cost, municipality to pay one-half.

Supp. R. S. '05, Sec. 5332-5335—Whenever a new line of railroad is to be constructed across a highway or vice versa the crossing must be above or below grade unless common pleas court allows it to be at grade.

Sec. 5320—Grade crossing on county line may be abolished by commissioners of both counties joining in proceedings; cost not paid by railroad companies to be borne equally by the counties.

Oklahoma, R. S. '03, Sec 1031—Height of viaducts to be 20 feet or two 1905 passage ways of 14 feet each.

Sec. 1052—Any railroad corporation may raise or lower any highway to allow its railroad to pass over or under.

Sec. 1054—Railroad must maintain all bridges and abutments at non-grade crossings.

Oregon, L. '07, Sec. 25, p. 76-77—Railroad commission to determine manner 1907 one railroad shall cross another; to avoid grade crossing if reasonable and practicable. (Railroads include interurban and electric roads.)

Pennsylvania, L. '07, No. 188, p. 240-43—Boroughs authorized to enter into 1907 contract to build viaducts over any railroad track * * * county commissioners to pay 30 per cent. entire cost on approval of court of quarter sessions, * * * railroad and borough to pay the remainder.

Railroad must contract to help maintain bridges before going over or under same. (Applies to electric and all other railways.)

L. '03, p. 164—Where new highways are to be built * * * township or county to pay expense of under or overhead crossing.

P. & L. D. '94, Sec. 3930, pt. 71—Railroad in city may separate grades with consent of city.

P. & L. D. '94, Sec. 3931, 3973-74—A court may require crossings of two railroads to be other than at grade.

Rhode Island, L. '99:658, Sec. 45—No railroad shall be built at grade across 1908 highway or vice versa, save with consent of commissioner.

South Carolina, R. C. '02, Sec. 2111—Two railroads may cross at grade 1908 under supervision of railroad commissioner.

Sec. 2149—Railroad must maintain bridges, approaches, etc., at non-grade crossings.

Sec. 2179—No grade crossing of two railroads without written approval of commission.

Sec. 2181-82—Railroad may raise or lower highway in order to separate grades; must get decree from county commissioners describing what alterations may be made.

South Dakota, L. '07, p. 111, Sec. 26—Board of commissioners of any city 1907 may require railroad to construct viaduct or overhead crossings. To assess railroad company cost or proportion the amount.

R. C. '03, p. 656, Sec. 525—Railroad may raise or lower any highway for purpose of crossing over or under same.

R. C. '03, p. 656, Sec. 526—Railroad must maintain all bridges or abutments constructed by railroad to pass over or under highway.

R. C. '03, p. 646, Sec. 5—Railroad may cross highway at grade or not.

R. C. '03, p. 646, Sec. 6—Railroad may cross another. If they cannot agree as to manner of crossing, court to decide. New road to bear entire cost.

Texas, Supp. S. C. S. '06, title 94:13b, p. 449, Sec. 1—Railroad commission 1907 to decide manner in which one railroad to cross another.

Utah, C. L. '07, Sec. 440—Railroad may cross other railroads at grade 1907 through canyons.

Vermont, P. S. '06, Sec. 4422—Highway may pass over, under or at grade. 1906 When highway is at grade commission may order it not to be at grade.

P. S. '06, Sec. 4424—Railroad may raise or lower highway so as to make the crossing not at grade.

P. S. '06, Sec. 4426—Railroad to maintain constructions at non-grade crossings.

P. S. '06, Sec. 4544—On petition of selectmen of a town railroad commissioners may require change in method of crossing highway.

P. S. '06, Sec. 4545—Railroad commission to apportion expense, state not more than 25 per cent., town 10 to 15 per cent., and railroad 65 per cent.

P. S. '06, Sec. 4546—Every railroad corporation operating more than eighty miles of track to remove one grade crossing for every eighty miles of each year.

P. S. '06, Sec. 4547-48—Railroad commissioners may require railroad to remove grade crossing.

Virginia—NOTE—Public service corporations include steam and electric 1908 railways.

Code '04:54a, Sec. 1294b, pt. 3—Railroad may cross any other railway or highway at grade or not. If not at grade cost to be borne by party making the improvement. Railroad may alter any highway.

Code '04, :54a, Sec. 1294d, p. 38—All railway or highway crossings whenever practicable shall be above or below grade. Does not apply to crossings in cities or towns or to electric railways within or without cities or towns. Pt. 39, railroads to maintain crossings.

West Virginia, L. '07:43—Railroad may cross another at, above or below 1907 grade and may alter county road.

Wisconsin, L. '07, p. 498, Sec. 1828—Railway may cross street or highway 1907 at grade or not or may carry street or highway over or under track.

L. '07, p. 285, Sec. 1299h, pt. 1—Railway shall construct and maintain crossings not at grade without the limits of cities.

R. S. '99, Sec. 1299h—Local authorities may make contracts with railroads as to separation of grades at crossings.

Wyoming, R. S. '99, Sec. 2949—Railroad may alter any county road or 1907 other public highway to cross over or under same.

STATES HAVING STATUTES ALLOWING OR REQUIRING INTERLOCKING DEVICES.

California, C. C. P. '06, Sec. 1240—No railroad main track crossing outside 1907 the limit of any incorporated city or town or city and county shall be at grade, unless such party * * * shall, at his own expense, protect such crossing by the construction, operation and maintenance of an interlocking plant.

Colorado, R. S. Supp. '05:105, Sec. 3701a—Railroad may put in interlocking 1907 devices.

Sec. 3701b—Railroads to bear expenses of building and maintenance equally.

Delaware—Railroads crossing one another at grade must install inter- 1907 locking devices and maintain at own expense. L. '01-03, p. 326.

Florida, G. S. '06, Sec. 2840—Railroads may put in interlocking or de- 1907 railing devices.

Illinois, R. S. '05, Sec. 211, p. 1610—On petition Railroad and Warehouse 1907 Commission may order interlocking or safety devices.

Sec. 213—If railroads cannot agree on kind of signals Railroad Commission decides and proportions the cost of erection and maintenance.

R. S. '05, p. 1610, Sec. 212—Railroad Commission, if it decides railroad grade crossings dangerous, may require railroad to put in interlocking devices.

R. S. '05, p. 1579, Sec. 76a—Railroads may put in interlocking or other automatic devices where they cross at grade. Must be approved by the commission.

Indiana, R. S. '08, Sec. 5228—Railroad crossing another or electric rail- 1908 road may put in interlocking devices approved by the auditor.

Sec. 5229—On petition of railroad companies auditor may order interlocking devices and designate proportion of expense.

Sec. 5230—New railroads, either steam or electric, crossing another railroad must install interlocking devices at own expense and must maintain them.

Iowa, Code '97, Sec. 2060—Railroads may put in interlocking or other 1907 safety devices.

Sec. 2061—Any company may petition for interlocking or other suitable safety device in district court of the county.

Code '97, Sec. 2062—Court may order safety devices and make equitable division of the cost.

Kansas, G. S. '01, Sec. 5975—Interlocking devices required at railroad 1907 crossings * * * approved by Railroad Commission.

- Kentucky, G. L. '03, Sec. 775, p. 420—Interlocking devices may be put 1906 in at railroad crossings.
- Maine, R. S. '03, Sec. 92, p. 541—Interlocking devices may be put in at 1907 railroad crossing by consent of Railroad Commissioners.
- Massachusetts, L. '07:463, pt. 2, Sec. 146—Interlocking devices may be put 1907 in at railroad crossings with consent of Railroad Commissioners.
- Michigan, L. '07:312, Sec. 36—Railroad Commission may order modern 1907 system of protection where one railway crosses another (either electric or steam).
- Minnesota, L. '07:276—Railroad and Warehouse Commission may order 1907 railroad company to establish interlocking devices * * * expenses for erecting and maintaining to be divided by agreement of railroad companies or by the commission.
- Montana, L. '03:8, Sec. 1—Railroads may put in interlocking devices ap- 1907 proved by county commissioners.
- New York, C. & G., G. L., '06, p. 3087, Sec. 36—Railroads may put in in- 1907 terlocking devices, approved by Board of Railroad Commissioners.
- North Dakota, R. C. '05, Sec. 4296—Railroad may put in safety devices 1907 on approval of Railroad Commissioners * * * if commissioners do not approve, railroads may apply to judge of district court.
- Ohio—Railroad ommissioners may order safety devices where steam rail- 1908 roads cross each other, steam road crosses electric or interurban railway, electric or interurban railway crosses another, or where any steam, electric or interurban railway crosses street or highway at grade * * * Commissioners to apportion expense between railroad companies. L. '08, p. 390-91.
- Oregon, L. '07, Sec. 25, p. 76-77—New railroad crossing another shall put 1907 in interlocking devices approved by the commission * * * pay all cost. Railroad Commission may require railroads to put in interlocking devices approved by them. Commission to apportion cost if railroad companies cannot agree. (Includes electric and interurban railways.)
- Tennessee, L. '99:100—Railroads may put in interlocking devices at rail- 1907 road crossings.
- Texas, L. '07:15, p. 500, Sec. 2—Interlocking devices required at railroad 1907 crossing * * * must be approved by the commission.
- Virginia, C. '04, pt. 51, p. 684—Railroads may put in interlocking de- 1908 vices.
- Wisconsin, R. S. '99, Sec. 1808—Interlocking devices may be put in at 1907 railway crossings.

STATES HAVING STATUTES CONCERNING ELECTRIC RAILWAYS WITH REGARD TO
SEPARATION OF GRADE CROSSINGS AND INTERLOCKING DEVICES.

Connecticut, R. S. '01, Sec. 3709—No steam railroad shall hereafter be
1907 constructed across the tracks of any electric, cable, etc., railways
at grade.

R. S. '01, Sec. 3862—No electric, cable or horse railway shall
be constructed across any steam railroad at grade.

Sec. 3863—Street railway may petition commission for re-
moval of grade crossing.

Sec. 3864—Commission to apportion the expense.

Indiana, R. S. '08, Sec. 5224 and 5228—Railroad crossing another or elec-
1908 tric railway may put in interlocking device approved by the
auditor.

Sec. 5230—New railroad, either steam or electric, crossing
another railroad must install interlocking device at own expense
and must maintain same.

Sec. 5666—Electric railways have right to cross railway at
grade. New road to construct and maintain interlocking devices
approved by the auditor.

Sec. 5667—Crossing may be removed if electric railways fail
to install interlocking devices.

Sec. 5668—Electric railway right to cross either over or under
railway—clearance to be 21 feet 6 inches.

Sec. 5670—Crossings outside of cities or towns may be above
grade or below.

Sec. 5675—Right to cross other steam and electric railways.

Massachusetts, L. '07:463, pt. 1, Sec. 21, p. 488—Street railway shall not be
1907 constructed across the tracks of a railroad and vice versa at
grade without consent of Railroad Commission.

Michigan, L. '07:312, Sec. 36—Railway Commission may order modern
1907 system of protection where one railway crosses another (either
electric or steam).

Nebraska, L. '06:14, Sec. 35—Authorities of cities of 100,000 or more to
1907 regulate the crossing of railroads by street cars.

New Hampshire, R. S. '01, p. 530—No street railway shall lay its tracks
1907 across the track of a steam road or vice versa without the con-
sent of the commissioners. Commissioners to apportion the ex-
pense.

New York, C. & G., G. L. '06, p. 3109, Sec. 65—Street railways shall be
1907 laid out above or below railroad as determined by the commission.

Sec. 68—Expense apportioned by law.

P. 3067, Sec. 12—Commission, one a practical engineer, to de-
termine whether new railroad crossings shall be at grade or not.

Vol. 4, p. 1247—Includes street railways.

Ohio, L. '08, p. 390-91—Railroad Commissioners may order safety devices
1908 where steam roads cross each other, steam road crosses electric
or interurban railway, electric or interurban railway crosses an-

other or where any steam, electric or interurban railway crosses street or highway at grade * * * Commissioners to apportion expense between railroad companies.

R. S. '05, Sec. 5322-23—Any municipal corporation may require railroad company to abolish its grade crossings. * * * If railroad company and municipality disagree, may be submitted to circuit court to decide necessity. Court to apportion the cost.

Sec. 5325—Height of viaducts to be not less than 21 feet from top of rail and never less than 16 feet 3 inches when circuit court lowers same.

Supp. H. S. '05, Sec. 5329—Street railway companies to pay one-half and municipality one-half.

L. '08, p. 358-359—When street, electric or interurban railway and steam railway are unable to agree as to manner of crossing * * * common pleas court to decide and if practicable to avoid a grade crossing.

Oregon, L. '07, Sec. 25, p. 76-77—Railroad Commission to determine manner
1907 which one railroad shall cross another * * * to avoid grade crossing if reasonable and practicable. (Railroads include interurban and electric roads.)

Sec. 25, p. 76-77—New railroad crossing another shall put in interlocking devices approved by the commission * * * pay all cost. Railroad Commission may require railroads to put in interlocking devices approved by them. Commission to apportion cost if railroad companies cannot agree. (Includes electric railways.)

Pennsylvania, L. '07, No. 188, pp. 240-43—Boroughs authorized to enter
1907 into contract to build viaducts over any railroad track. * * * County commissioners to pay 30 per cent. entire cost on approval of court of quarter sessions. * * * railroad and borough to pay remainder.

Railroad must contract to help maintain bridges before going over or under same. (Applies to electric and all other railways.)

Texas—Electric railways same rights as steam roads.
1907

L. '07:15, Sec. 3—Electric railways to cross any steam road or highway.

Supp. S. C. S. '06, title 94:13b, p. 499, Sec. 1—Railroad Commission to decide manner in which one railroad shall cross another.

P. 500, Sec. 2—Interlocking devices required at railroad crossings must be approved by commission.

Vermont, P. L. '06, Sec. 4526—No street railway or other railroad shall
1906 cross another at grade except by permission of Railroad Commissioners.

Wisconsin, L. '01:465—All provisions of Sec. 6 of Sec. 1828, statutes 1898
1907 (roads right to cross other railways, etc.), shall apply to electric railways. Railroad Commission has power to determine kind of crossings.

TRESPASSING ON RAILROADS.

REPORT OF COMMITTEE ON TRESPASSING.

(From Proceedings of the North Central Association.)

To the Railroad Commissions of Michigan, Illinois, Wisconsin, Ohio and Indiana, in Convention Assembled:

Your committee on trespassing on the railroad respectfully report:

Five thousand six hundred and twelve trespassers on the railroads of the United States were killed during the year ending June 30, 1908. In the State of Indiana, where accident reports are made, and accident bulletins are issued, out of total fatalities for the year ending June 30, 1908, of 391 persons, 174 were trespassers. On the Pennsylvania lines west of Pittsburg from 1891 to 1907, inclusive, 3,103 trespassers were killed and 3,842 injured. The large proportion of killed to injured of these fatalities will be noted and it will attract especial attention that of all the fatalities on railroads in this country statistics show that nearly if not quite 50 per cent. are trespassers on the railroads.

The railroads are public highways, but not for footmen or horsemen, or for any conveyance except the engines and cars of the carriers. The states supervise and regulate the tolls of these highways and the safety of these highways. It seems to be the duty of the State also to protect the companies, whom it has invested with a part of its own sovereignty, against trespassers.

We think, chiefly to prevent loss of life, and also for the reason given above, that statutes prescribing that it shall be unlawful to walk upon, or stand upon, or go upon railroad tracks or bridges, except at such crossings and places which the public have a right to use, should be enacted. We are greatly impressed with the useless fatalities involved in present conditions and suggest that legislative action will not be taken except at the active insistence of railroad commissions. We have had carefully compiled the statutes prevailing in this country and the laws and customs of England, France and Germany and append these to this report to facilitate the preparation of proposed legislation.

We cannot too strongly urge upon our associates and upon the public attention to this humane and important matter.

A very great obstacle we apprehend will be the enforcement of such laws. The suggestion has occurred to us, and this is respectfully submitted, that police power might be given to section foremen as it is now given to conductors of trains, or to such persons as the Railroad Commission might appoint to enforce these laws.

We think that these acts should provide that the railroad companies shall post them in all their depots and in places where the public are accustomed to use their tracks.

Respectfully submitted,

W. J. WOOD,
O. H. HUGHES,
J. A. WILLOUGHBY,
Committee.

OFFENSES AGAINST RAILROADS.

Offenses against railroads whereby life is endangered may be divided into two sorts. On the one hand there are depredations and outrages, such as wrecking, robbing, firing upon or stoning trains or stealing railroad iron. Trespasses of persons and negligent or wilful acts whereby animals are allowed to get on the right-of-way, compose the other sort; and it is legislation concerning this latter sort that is examined here.

Assuming the relation of the railroad with employes and with persons on the right-of-way at lawful crossings provided for, there remains the trespasses of persons or animals within the fenced right-of-way, where a clear track is presumed. The topics which appear in this question and have been provided for somewhat by statute may be exhibited in a summary as follows:

TRESPASSES.

Persons—

- I. Walking on right-of-way.
- II. Using vehicle or riding on right-of-way.
- III. Contriving that animals be on right-of-way—
 - (a) by driving or enticing them on,
 - (b) breaking down fences or guards,
 - (c) leaving open gates at farm crossings.
- IV. Stealing a ride on trains.
- V. Passengers riding out on platform of cars.

In connection with these offenses the railroad may be at fault: First, by wilful or negligent lack of care in the operation of its trains, and in such case no statute was found relieving or lightening its liability for damages; again in connection with III, by its own neglect or wilfulness, the proper fences and guards may be lacking, in relation to which Section IV contains a summary of statutes imposing more than the ordinary liability; and finally, in the case of V the company must provide adequate accommodation within the cars for all passengers.

The trespasses enumerated are one and all prohibited by statute, more or less. To enable the railroad to adequately enforce, however, certain statutory measures are taken:

VII. Special police power may be given to the train crews or station masters.

VIII. Special police officers paid by the railroad may be appointed.

IX. The railroad may be released from liability if its fences and guards be secure, also, as appears in most of the statutes, a wilful trespasser may be denied damages or made liable to punishment.

The summary of the statutes concerning any one item will run generally as follows:

State, reference, age of statute, what prohibited or provided for, and how, declared an offence, penalties, special provisions for enforcement, notes. (Date.)

The date at the end gives the latest statute consulted.

ACTS IN RELATION TO WALKING ON TRACKS OR RIGHT-OF-WAY.

Ten states make explicit provisions concerning walking upon the tracks or right-of-way of a railroad. Of these, four explicitly forbid it, the others provide a penalty recoverable by an action. It has seemed best to add Georgia as a special case.

In the statement of a statute, saving clauses, excepting employes of the railroad or the case of persons on the tracks at lawful crossings, are to be presumed and consequently have been omitted in the following summaries:

Delaware, L., Vol. XXI, p. 480—"It shall not be lawful for any person * * * to walk along the track or tracks of any such railroad." (No penalty explicitly provided.) (1907.)

Maine, R. S. '03:52, Sec. 77. Whoever without right walks or stands on a railroad track or bridge forfeits \$5-\$20, to be recovered by complaint.

Sec. 76. "No railroad corporation shall be liable for the death of a person walking or being on its road contrary to law, or its valid rules and regulations."

Sec. 78. Printed copies of Sec. 77 to be posted; fine not over \$100 for each case of neglect. (1907.)

Massachusetts, L. '06:463, Sec. 232 (1853)—"Whoever without right stands or walks on a railroad track shall forfeit not less than five nor more than fifty dollars." (42 Mass., 300.) (1907.)

Missouri, R. S. '06, Sec. 1105 (R. S. 1889)—Any person walking upon track or tracks and receiving harm on account thereof shall be deemed to have committed a trespass in any action brought by him, but not otherwise. (1907.)

Annotations: One walking upon a properly fenced track is a trespasser for whose presence and safety the company is not bound to keep a lookout. 11 S. W., 254; 19 S. W., 483; 74 S. W., 1002.

Statute does not relieve the company from all duty of exercising care. 60 S. W., 195.

New Hampshire, R. S. '01:266 (1899)—A person entering upon or remaining in the right-of-way, tracks, yard, station, * * * when notice has been posted forbidding such trespass, shall be fined not more than \$20; no right to enter upon or be upon any railroad track shall be implied from custom or use, however long continued. One injured in such case shall have no cause for action for damages unless it be due to wilful negligence of the railroad. (1907.)

New Jersey, L. '03:257, Sec. 55—It shall not be lawful to walk along the tracks. No damages recoverable for injuries received while "walking, standing or playing on any railroad, or by jumping on or off a car while in motion." (1907.)

New York, R. S. '06, III, p. 3103 (L. 1850 and 1892)—"No person * * * shall walk upon or along its track or tracks." (1907.)

Rhode Island, L. 1899:613—Any person who without right knowingly stands or walks or rides a bicycle or other vehicle on the roadbed of any steam railroad shall be fined \$5-\$20. Any police officer may arrest such person without warrant. Act to be posted at or upon each passenger station. (1907.)

Virginia, R. S. '04, Sec. 3726 (1883)—"If any person be on track of a railroad within one hundred yards of an approaching train * * * he shall be fined \$10-\$100." (1906.)

Wisconsin, R. S. '98, Sec. 1811 (1878)—"It shall not be lawful for any person * * * to walk," etc., as in New York. (1907.)

Annotations: Habitual use for years of track by community tends to show license and to repel the inference of contributory negligence. 53 Wis., 626.

Statute does not change rule that a company is liable for the result of its negligent acts or omissions to a licensee on its right-of-way. 58 Wis., 646.

Georgia, Code 1895, III, 519—"Any person intruding unlawfully upon the constructed track of a railroad company, or the state railroad, contrary to the will of the company or superintendent, shall be guilty of a misdemeanor." (1875.) Walking would seem to be intruding, yet we find this annotation: "Merely to walk upon the track not indictable. 71 Ga., 428."

In connection with the subject of this section the following explicit statute of Indiana may be quoted:

R. S. '08, Sec. 5244—"Use by the public (of the) right-of-way or depot grounds of any railroad in this State by riding, driving or

walking thereon, shall not ripen into a right to do so even though it has been so used for a period of twenty years or more; nor shall use be evidence of a grant to do so except where such use is made across such ground to connect a street or highway on each side thereof, and except where a court of competent jurisdiction had adjudged the existence of a street highway."

ACTS IN RELATION TO DRIVING VEHICLES OR ANIMALS ALONG TRACKS OR RIGHT-OF-WAY.

In another sort of trespass on a railroad track a person may ride a bicycle or horse, or drive a buggy along the same or use the right-of-way as a highway for driving cattle, sheep or other animals. Offenses of this kind have been provided against by legislation in twenty-two states. It is to be observed that use of the tracks *as a highway* is the idea of this section. Saving clauses are omitted as before:

Arizona, L. '05:49—To use any part of a railroad as a right-of-way upon or along which to drive or propel any railroad track, bicycle track, velocipede, tricycle or other vehicle is a misdemeanor. Fine not more than \$100, imprisonment not over 100 days, or both. (1907.)

Arkansas, R. S. '04, Sec. 2001 (1875)—Every person who uses railroad track as common highway for horses, cattle or vehicles * * * shall on conviction be fined not over \$25, imprisoned not over 30 days, or both. (1905.)

California, Pen. C. '06, Sec. 369 (1877), Par. (E)—Misdemeanor to lead, drive or conduct any beast along the track of a railroad or suffer it to be placed within the fenced right-of-way for grazing or other purposes. Par. (G)—Misdemeanor to ride, drive or propel any vehicle upon and along track, through or over the private right-of-way. (1907.)

Colorado, L. '03:155—Unlawful to place upon or propel or use upon track any railway bicycle, push car, hand car, slide or similar vehicle. Misdemeanor. Fine not over \$300, imprisonment not over 6 months, or both. (1907.)

Connecticut, L. '05:202—Any one who may lead any beast on track * * * shall be fined not over \$50, imprisoned not over 30 days, or both (1907.)

Delaware, L. Vol. XXI, p. 480—"If any person shall ride, lead or drive any horse or other animal upon such railroad and within such fences and guards other than at farm crossings * * * he shall for every such offense forfeit a sum not exceeding ten dollars, and shall also pay all damages, which shall be sustained thereby to the party aggrieved." (1907.)

Illinois, R. S. '05:114, Sec. 64—Whoever shall ride, lead or drive any horse or other animal upon the track or lands * * * and within such fences or guards, * * * liable to penalty \$10-\$100.

- Maine, R. S. '03:52, Sec. 77—Whoever without right enters upon a railroad track with any team or vehicle, however propelled, or drives or propels * * * along track shall be punished; fine not less than \$50, or imprisonment not less than 30 days. (1907.)
- Massachusetts, L. '06:463, Sec. 235 (1874)—Whoever rides, drives or leads a horse or other beast upon a railroad * * * shall forfeit not over \$100, and shall be liable for the damages. (1907.)
- Minnesota, R. L. '05, Sec. 5148 (1903)—It is a misdemeanor to enter upon, afoot or with any animal or vehicle, any railway bridge or trestle, or to ride, operate or propel a velocipede, track bicycle or tricycle on or along the track of any railway. (1907.)
- Mississippi, Code '06, Sec. 1342—To ride or drive any vehicle, cattle, horses, mules or other live stock on railroad * * * is a misdemeanor. Fine \$10-\$200, imprisonment not over three months, or both. (1906.)
- Missouri, R. S. '06, Sec. 1105—Person who rides, leads or drives any horses or other animals upon such road within such fences and guards forfeits for each offense not more than \$10 and damages. If fences and guards be secure, corporation not liable for damages to animals, unless negligent or wilfully done. (1907.)
- Nebraska, R. S. '03, Sec. 2165 (1873)—“Every person who shall draw or drive any wagon, carriage, cart, coach, gig or other two or four-wheeled vehicle on or between the rails or tracks or on or along the graded roadway of such road (unless compelled by necessity so to do) * * * shall be fined \$5-\$25.” (1907.)
- New Jersey, L. '03:257, Sec. 21—As in Missouri. (1907.)
- New York, R. S. '06, III, p. 3103—“Any person riding, leading or driving any horse or other animal upon any railroad, or within the fences and guards thereof * * * shall forfeit to the people of the state the sum of ten dollars, and pay all damages sustained thereby to the party aggrieved.” (1907.)
- North Dakota, L. '07:206—Unlawful to drive, ride or lead any animal or use any vehicle on any railroad track or to use the same as a highway. Misdemeanor.
- Ohio, Laning's Revision, '05, Sec. 10489—“Whoever draws or drives any two or four-wheeled vehicle on or between the rails or tracks or along the graded roadway of any steam railroad * * * shall be fined \$5-\$25.” (1906.)
- Pennsylvania, L. 1838, Apr. 16—If any person shall * * * lead, drive or cause to be led or driven any horse, mule, ox, sheep, swine or other cattle on railroad or its right-of-way, or haul any vehicle * * * upon such railroad, such person shall forfeit \$25 and pay all damages. Pepper and Lewis' Digest, 1894, p. 3950. (1907.)
- Rhode Island, L. '99:613—As already quoted.
- Vermont, R. S. '06, Sec. 4457—“A person who rides, leads or drives a horse or other animal upon a railroad, and within such fences and guards * * * shall forfeit not more than ten dollars, to be recovered by the corporation in an action on the case, and shall also pay the damages sustained thereby to the party aggrieved.”

Virginia, R. S. '04, Sec. 3726 (1883)—Any person wilfully riding, driving or leading any animal or contriving for any animal to go on track, * * * shall be fined \$10-\$100. (1906.)

Wisconsin, R. S. '98, Sec. 1811 (1872)—“If any person shall ride, lead or drive any horse or other animal upon such road when such road be fenced, or if any person or persons shall ride, lead or drive any horse or horses or teams lengthwise of said track when it is not fenced,” * * * shall forfeit not over \$10 to the corporation and pay all damages. (1907.)

CONTRIVING THAT ANIMALS BE ON TRACK.

The trespasses in the preceding section were those by which the right-of-way is used as a convenience. An owner, however, may get an animal on the railroad track intending that it be killed or injured and the resulting damages be collected from the railroad. There seems to be three kinds of such trespasses as provided against by statutes:

(a) The animal may be driven or enticed upon the track.

(b) Fences or guards may be broken down, leaving access to the right-of-way, or (c) the gates at a farm crossing may be left open. Some statutes provide for all three in the same section; some states provide for one kind and not for the other; hence the method of summary below:

(a) (Eleven states, one territory.)

Alabama, Code '07, Sec. 7678—Any one convicted of salting the track of a railroad must be punished, at discretion of the jury, by death or imprisonment for not less than 10 years.

Arizona, C. C. '01, Sec. 3041—Owner who drives animals or causes them to be driven upon the track intending that they be thereby injured shall be liable for all damages and shall be punished for a felony.

Colorado, R. S. '91, Sec. 3716—An owner who intentionally drives stock on track and the stock be killed or injured shall receive no damages from railroad, but be liable to railroad for all damages it may suffer and shall be guilty of a felony. Imprisonment 1-5 years.

Florida, R. S. '06, Sec. 3661—Whoever * * * salts track * * * for the purpose of attracting cattle thereto, or whoever shall drive cattle thereon * * * imprisonment not over 10 years.

Illinois, R. S. '05:114, Sec. 64—“Whoever shall ride, lead or drive any horse or other animal upon the track or lands, * * * and within such fences or guards * * * or shall tear down or render insufficient to exclude stock, any part of such fence, guards, gates or bars * * * or shall leave the gates or bars at farm crossings open or down * * * or shall leave horses or other animals standing upon farm or road crossings,” liable to penalty \$10-\$100.

Maine, R. S. '03:52, Sec. 79—Whoever takes down or intentionally injures any such fence, * * * or turns any horse, cattle or other animal upon or within the inclosure of such railroad. Fine \$10-\$100, or imprisonment 10 days-6 months.

Massachusetts, L. '06:463, II, Sec. 236—"The person through whose fault or negligence a horse or other beast goes at large within the limits of a railroad opened for use, shall forfeit not more than twenty dollars for each offense, and be liable for any damage which results therefrom."

Michigan, R. S. '97, Sec. 6294—The person who intentionally drives, rides or leads any horse or other animal upon such road and within such fences or guards * * * or injures or destroys or makes openings or passages through or over * * * or neglects to close gates or bars shall be fined not over \$100, and be liable for all damages resulting.

Minnesota, R. S. '05, Sec. 5147—Misdemeanor to break down or carry away any part of fence, bars or gate * * * or to destroy or injure any hedge, ditch or other structure used or intended as a fence to inclose tracks, or to use gate or bars and permit animal to stray upon track, * * * or to lead, drive or turn upon such track any animal for grazing or other purpose. Imprisonment not over 30 days, fine \$10-\$50.

Tennessee, R. S. '96, Sec. 1587—Proof of wilful intent on the part of the owner to procure the killing or injury of live stock shall defeat the recovery of damages.

Vermont, R. S. '06, Sec. 4458—The person through whose fault or negligence a horse or other beast is at large within the limits of a railroad shall forfeit not over \$20 per animal and damages.

Virginia, R. S. '04, Sec. 3727—Person convicted of driving or contriving that any animal be on track with view to recover damages shall be imprisoned 1-10 years, or confined in jail not over 1 year and fined not over \$500.

(b) (Six states.)

Alabama, Code '07, Sec. 7668—Every person convicted of wilfully breaking or destroying any railroad fence must be fined \$10-\$500, or imprisoned 10 days-12 months.

Illinois—See (a).

Maine—See (a).

Minnesota—See (a).

Missouri, R. S. '05, Sec. 1958—Misdemeanor to break down in any way or to injure fences or guards.

Virginia, R. S. '04, Sec. 3728a—To injure or destroy fences or cattle stops * * * misdemeanors. Not less than 15 days, \$10, or both.

(c) (Ten states.)

The offence is in each case to neglect to close gates or put up bars at farm crossings after passing through.

The summary sets forth the penalty.

California, R. S. '06, Pen. C, Sec. 369d—Misdemeanor.

Connecticut, Gen. S. '02, Sec. 1373—Not over \$10 and be liable for all damages therefrom.

Illinois—See (a).

Idaho, L. '03, p. 324—No recovery can be had on account of stock injured or killed * * * by reason of failure to keep gates closed.

Massachusetts, L. '06:463, II, Sec. 237—\$2-\$10 and be liable for all damages resulting therefrom.

Michigan—See (a).

Minnesota—See (a).

Missouri, R. S. '06, Sec. 1958—Misdemeanor.

New Hampshire, R. S. '01:266, Sec. 5—\$10 and damages.

Rhode Island, R. S. '96, p. 601—\$2-\$10 and damages.

Utah, R. S. '07, Sec. 456XI—(As in Idaho).

Wisconsin, R. S. '98, Sec. 1811—\$10-\$50 and damages.

VI. TO INSURE SECURITY OF FENCES AND GUARDS.

To secure the erection and maintenance of fences and guards where necessary, several States provide in case of accidents on account of lack or defects of such that the company shall be liable to double damages if claims of persons aggrieved be not settled within a specified time.

Florida, R. S. '06, Sec. 2871—60 days. Person entitled to damages must present claim in writing within one year.

Iowa, Code '99, Sec. 2055—30 days.

Minnesota, R. S. '05, Sec. 1997—30 days.

Nebraska, R. S. '03, Sec. 10021—30 days.

Missouri, R. S. '06, Sec. 1105—Provides that double damages shall be paid for injuries resulting from failure to *build* fences and guards.

Connecticut, Gen. S. '02, Sec. 3736—Railroad corporation failing to comply with orders of railroad commissioners respecting fences and cattle guards shall forfeit to the state \$100 per month of default.

North Carolina, R. S. '05, Sec. 3753—Railroad corporation failing to construct or maintain cattle guards at its points of entrance and exit upon enclosed lands, and failing to keep in constant repair the crossings to any plantation road thereupon is guilty of misdemeanor, and upon conviction shall be fined at the discretion of the court.

Virginia, R. S. '04, Sec. 1294d, Par. 15—If track be not enclosed claimant need not show negligence on part of railroad.

Below is a summary of statutes providing that the railroad must erect cattle guards and farm crossings within a certain time after service of written demand by land owner, who, in default thereof, may recover * * * or erect and recover cost and * * *

<i>Statute.</i>	<i>Notice</i>	<i>May recover there- after.</i>	<i>May erect and recover.</i>
Alabama R. S. 1907, Sec. 5513	30 days	\$25 per 30 days' default	
Arkansas R. S. 1904, Sec. 6644	10 days	\$25-200	
Georgia R. S. 1895, Sec. 2244	30 days	\$25 per diem of default	
Idaho L. 1903, p. 324	30 days		Cost.
Illinois R. S. 1905: 114, Sec. 66	30 days		Twice the cost.
Kansas R. S. 1901, Sec. 5920	60 days Dec. and Jan. excepted		Cost plus 1 per cent interest per month from time the fence was built.
Maine R. S. 1903: 52, Sec. 27	30 days	\$100	
Massachusetts L. 1906: 463, II, Sec. 103	Unreasonable neglect	Not over \$200 per month of default	
Minnesota R. S. 1905, Sec. 5178	40 days, exclu- sive of Oct. 1 to April 1	Not over double cost of such fence, with court costs and attorney's fee.	Or he may con- struct and re- cover in like manner.
Missouri R. S. 1906, Sec. 1105	5 days after r. r. has been con- structed 3 months		Cost, compensation for time and trouble, 10 per cent interest per annum thereon from time of ser- vice of process in such suit, attor- ney's fee.
Nebraska R. S. 1903, Sec. 10020	6 months		Cost.
New Hampshire R. S. 1901, p. 519	20 days		Twice the cost.

<i>Statute.</i>	<i>Notice</i>	<i>May recover there- after.</i>	<i>May erect and recover.</i>
North Dakota R. S. 1905, Sec. 4301	60 days		Cost at not over \$1.25 per rod and all damages.
Oklahoma R. S. 1903, Sec. 1061	60 days		Cost at not over \$1.25 per rod.
South Dakota C. C. 1903, Sec. 542	60 days		Cost not over \$1.25 per rod.
Vermont R. S. 1906, Sec. 4445			Cost.
Virginia R. S. 1904, Sec. 1294d, Par. (16)	30 days	\$5 per diem de- fault	
Wisconsin L. 1907: 254	3 months. Nov. 1 to April 1 excepted	\$10 per day de- fault	

Land owner must first give 10 days' notice, and then get an order from the circuit court (if court approves necessity). Applied only to cattle guards.

STEALING A RIDE.

So far the offenses considered have been trespasses upon the right-of-way. There are several others that are properly trespasses upon the trains and cars. Such a one is "stealing a ride." Thirty-five States have enacted statutes against such offenses. In defining just what shall be unlawful they vary widely in wording and in the following summary this part is usually quoted verbatim. The usual saving clauses are omitted or summed up as *without right*.

Alabama, Code '07, Sec. 7682—Whoever without right "rides or attempts to ride, on the top of any car, coach, engine or tender, on any railroad in this state, or on the draw heads between the cars, or under the cars on truss rods or trucks, or in any freight car, or on a platform of any baggage car, express car, or mail car, on any train in this state," * * * shall be guilty of a misdemeanor and on conviction fined \$10-\$100.

Arkansas, L. '05:191—It is a misdemeanor to board any moving train without bona fide intention to become a lawful passenger thereon. Penalty \$5-\$100.

Connecticut, L. '05, p. 404—"Every person who shall, without right, be upon, or attach himself to, any engine or car upon the track of a railroad * * *," shall be fined not over \$50, or imprisoned not over 30 days, or both.

Delaware, Laws, Vol. 14:416—"If any person enter into, or get on the platform, or steps attached to any railroad car, of whatever kind, * * * contrary to the rules of the company," * * * fined \$5. It shall be the duty of constables and police officers to arrest without warrant every such offender.

Florida, R. S. '06, Sec. 3655—No person without right shall board or enter upon any railroad train or locomotive while same is in motion, or cling to any bar, railing or other outside fixture of any train or locomotive while * * * . Penalty not over \$25, or not over 30 days. This section shall not alter liability of railroad for damages for injury or death of such person.

Idaho, L. '03, p. 41—"Every person who shall * * * ride or attempt to ride upon any locomotive engine, railroad car, railroad trains of any character in or upon any part thereof, for the purpose or with the intent of stealing a ride thereon, or who shall * * * climb upon, hold to or in any manner attach himself to any locomotive engine or railroad car or railroad train or trains of any character while the same are in motion, shall be guilty of a misdemeanor." Penalty not over 30 days, or not over \$60, or both.

Illinois, R. S. '05:114, Sec. 79—"No person or minor shall climb, jump, step, stand upon, cling to, or in any way attach himself to any locomotive engine or car, either stationary or in motion, upon any part of the track of any railroad * * * ." Penalty not over \$25 or not over 12 hours' imprisonment.

Indiana, R. S. '08, Sec. 2670—"Whoever * * * either climbs, jumps or steps upon, swings upon, attaches himself to or steps, jumps or swings upon any locomotive engine or car * * * while the same is in motion, shall * * * be fined not more than three dollars."

Iowa, Code '97, Sec. 4811—"If any person * * * get upon or off any locomotive engine or car of any railroad company, while the same is in motion, or elsewhere than at the established depot of such company, or get upon, cling to or otherwise attach himself to any such engine or car for the purpose of riding upon the same, intending to jump therefrom when such engine or car is in motion, he shall be guilty of a misdemeanor."

Kansas, R. S. '01, Sec. 2414—It is a misdemeanor for any person to "climb upon, hold to or in any manner attach himself to any locomotive engine or car, or train of any character * * * in motion or standing still, or to ride or attempt to ride in or upon any part thereof for the purpose of stealing a ride thereon * * * ."

Sec. 2416—Penalty for violations of above, not over 30 days, or not over \$25, or both.

Kentucky, R. S. '03, Sec. 805—It is unlawful for any person without right "to get on or off on the outside or to swing on or hang on from the outside of any engine or car while the same is in motion or switching, or immediately preceding" such movements. Penalty not over \$10.

Louisiana, R. S. '04, p. 410—Any person who without right "rides or attempts to ride on the top of any car, coach, engine or tender on any railroad, * * * or on the drawheads between the cars, or under the cars, on truss rods or trucks, or in any freight car, or on the platform of any baggage car, express car, or mail car on any train," * * * shall be guilty of a misdemeanor. Penalty not over \$50. or not over 6 months, or work on the street or public roads, at discretion of the court.

Maine, R. S. '03:52, Sec. 79—Whoever without right "gets on or leaves any steam engine, tender or car at any place outside of a railroad station, while such * * * is in motion, shall be imprisoned not over 30 days, or fined" not over \$10. "This provision does not affect the liability of any railroad corporation for injuries or damages caused by fault or negligence of the corporation or its servants."

Maryland, R. S. '04, Art. 27, Sec. 366—Any person who * * * shall "cling, climb, jump, step or in any other way get upon any part of any locomotive, engine or car * * * of any kind on any part of the track of any railroad * * * shall be guilty of a misdemeanor. Penalty, \$1-\$25, nor over 6 months, or both.

Massachusetts, L. '06:463, II, Sec. 234—"Whoever, without right, rides or attempts to ride upon a locomotive engine, tender, freight car, caboose or other conveyance not a part of a passenger train, * * * after being requested to leave the same, * * * shall be punished," fine not over \$50, or imprisonment not over 6 months. Any sheriff, constable, * * * or railroad policeman * * * may arrest upon view, any one violating this act.

Michigan, R. S. '97, Sec. 11533—"No person shall jump or step on board of any train, locomotive or car when in motion * * * ." Penalty, not over \$10 and costs, in default of which not over 30 days.

Minnesota, R. S. '05, Sec. 51778—It is unlawful for any one to get on or off, or to attempt * * * or to swing on, or hang on from the outside of, any engine or car upon any railroad track, while such * * * is in motion, or switching or being switched. Fine not over \$10. Any sheriff, constable or police officer finding such a trespasser shall arrest without warrant.

Mississippi, R. S. '06, Sec. 1344—"Any person who shall ride on any engine, tender, car, or train" (without proper permission or right) shall * * * be fined not over \$20, or imprisoned not over 30 days, or both.

Sec. 1347—Any person who without right "shall willfully climb, jump, or step upon, or in any way attach himself to, or shall jump off a locomotive, tender or car while in motion," * * * shall be fined \$5-\$25, confined in jail 5-25 days, or both.

Missouri, R. S. '06, Sec. 2333—It is a misdemeanor for any person to "climb upon, hold to or in any manner attach himself to any locomotive engine or car, while the same shall be in motion, or running into or through any city or town in this state."

Montana, L. '99, p. 150, Sec. 1—Misdemeanor "for any person to enter upon, ride upon, or secure passage upon, any railroad car or locomotive or tender, of any description, other than a car used exclusively for the carriage of passengers, with intent thereby to ride without payment therefor, or fraudulently obtain carriage upon any such car, locomotive or tender.

Sec. 2. Misdemeanor "for any person excepting * * * to take passage or ride upon, or enter for the purpose of taking passage or riding upon, the trucks, rods, brake-beams, or any part of any car, locomotive or tender not ordinarily and customarily used, or intended for the resting place of a person riding upon or operating the same."

Nebraska, L. '07:168, Sec. 1—"Every person who shall climb upon, hold or attach himself in any manner to any locomotive engine, railroad train or trains of any character, while the same are in motion or not in motion or stationary, or who may ride, or attempt to ride, upon any locomotive * * *, or upon any part thereof, for the purpose and with the intent of stealing a ride thereon."

Sec. 3—Penalty, 5-60 days at hard labor or fine \$5-\$25.

New York, P. C. '03, Sec. 426—Any person who: (1) rides on any engine or train while in motion (for the purpose of obtaining free transportation thereon as a passenger) is guilty of a misdemeanor.

North Carolina, R. S. '05, Sec. 3748—It is a misdemeanor for any one to "ride or attempt to ride on top of any car, coach, engine or tender on any railroad in this state, or on the drawheads between the cars, or under cars on truss rods, or trucks, or in any freight car, or on a platform of any baggage car, express car or mail car on any train * * *." Penalty, not over \$50, or over 30 days.

North Dakota, R. S. '05, Sec. 4401—Unlawful for any person to enter upon, to take passage or ride upon the trucks, rods, brake-beams or any part of any car, locomotive engine or tender not intended for passengers.

Sec. 4402—10-30 days at hard labor, or \$10-\$75.

Ohio, R. S. '05, Sec. 10675—Any person who climbs, jumps, steps or stands upon, or clings or in any way attaches himself to, any locomotive engine or car, upon any part of the track of a railroad * * * shall be fined not over \$25.

Oklahoma, L. '03:12, Art. 5—Any person who "rides, or attempts to ride, on top of any car, coach, engine or tender on any railroad in this territory, or on the drawheads between the cars or under cars on truss rods, or trucks, or in any freight car, or on the platform of any baggage car, express car, or mail car * * *" shall be guilty of a misdemeanor.

Oregon, L. '03, p. 138, Sec. 1—"Every person who shall ride or attempt to ride upon any locomotive engine, railroad car, railroad train or trains of any character, or in or upon any part thereof, or * * * climb upon, hold to or in any manner attach himself to any locomotive engine, or * * * while the same are in motion, or standing still, shall be guilty of a misdemeanor,"

Pennsylvania, L. 1879, June 11 (Pepper & Lewis' Digest 1894, p. 3950)--
Any person who trespasses upon a railroad train * * * fined \$5-\$15, or imprisoned not over 10 days, or both, in default of payment of fine 10 days additional.

South Carolina, R. S. '02, II, Sec. 483—Whoever by riding without permission on trains that do not carry passengers, or by concealing himself upon or about any train with intent, evades the payment of lawful toll or fare, shall be guilty of a misdemeanor. Penalty not over \$50, or not over 30 days on the chain gang.

Tennessee, R. S. '96, Sec. 1598—"No minor or other person shall climb, jump, stand up (upon) or cling to, or in any way attach himself to any locomotive engine or car upon any part of the track of any railroad. * * *"

Sec. 1599—Penalty, not over \$5. * * * Provided, That this and the last section shall in no case be used to the prejudice of the persons referred to in the last section in any suit which may be instituted for damages growing out of a violation of the provisions of the same, but any right of action for damages shall remain as full and complete as heretofore."

Utah, R. S. '07, Sec. 4341—"Every person who clandestinely enters into or upon any railroad car for the purpose and with the intention of riding or being transported thereon, or who, having * * * rides over any railroad line or portion thereof * * * (without right) * * * and with the intention to defraud such company or person of the fare or compensation for such transportation, shall be guilty of a misdemeanor, * * * punished," * * * imprisonment not over 50 days or fine not over \$50, or both.

Sec. 4342—Misdemeanor for any employe or servant of the company to aid or abet any person in violation of the preceding section.

Vermont, R. S. '06, Sec. 4518—Minor found boarding a train or loitering about yard or station shall be punished. Penalty, 5-30 days, or \$1-\$5 and costs.

Sec. 5860—Any one stealing a ride on a freight train shall be deemed a tramp. Punishment, not over 6 months, or not over \$100.

Sec. 4512—Special police of the railroad may arrest without warrant tramps found on the property of the railroad.

Virginia, R. S. '04, Sec. 3726a—To prevent trespassers from jumping on or off trains. "If any person, not being a passenger or employe, but a trespasser, shall be found upon any railroad car or train of any railroad in this state, or shall jump on or off any car or train on its arrival, stay or departure at or from any station or depot of such railroad, or on the passage of any such car or trains over any part of any such railroad, such person * * *" guilty of a misdemeanor. Penalty, \$2.50-\$10, not over 30 days, or both.

Sec. 3726b—To prevent trespassing upon railroad trains. "If any person, not being a passenger or employe, shall be found trespassing upon any railroad car or * * * by riding on any car, or any part thereof, on its arrival * * * (as above)." Fine, \$2.50-\$25. not over 30 days, or both.

West Virginia, R. S. '06, Sec. 4282—If any person, not a passenger * * * "be found trespassing * * * by jumping on or off any car or train on its arrival, stay or departure at or from any station or depot * * * or on the passage of any such car or trains over any part of any such railroad, such person * * *" disorderly. Penalty, not over \$25, or not over 30 days, or both.

Wisconsin, R. S. '98, Sec. 4397—"Any person under the age of seventeen years who shall get upon, attempt to get upon, cling to, jump or step from any railroad car or train while the same is in motion shall be punished." Penalty, \$2-\$20.

Comparison shows marked similarity of the statutes in Alabama, Louisiana and Oklahoma, and in Idaho and Oregon.

V. PASSENGERS ON PLATFORM OF CAR.

Another offence whereby life is endangered in connection with the cars is that of passengers riding on the car platform. In nine states there is a statute in relation to this. The terms of the act are nearly identical in each case, but they differ in the provisos which define the duty of the railroad in such a case. The following is typical of the first part.

In case any passenger on any railroad shall be injured while on the platform of a car while in motion, or in any baggage, wood, gravel or freight car, in violation of the printed regulations of the company posted up at the time in a conspicuous place inside of its passenger cars then in the train, such company shall not be liable for the injury, *provided*, * * *

The references, additions to and provisos are summarized as follows:

Michigan, R. S. '97, Sec. 6303— * * * and in spite of notification by conductor or brakeman * * *, provided the company at that time furnished a seat inside.

Nebraska, R. S. '03, Sec. 10040— * * * "provided said company furnished room inside its passenger cars sufficient for the accommodation of its passengers."

Nevada, R. S. '00, Sec. 1018— * * * in violation of * * * or verbal instructions given by any officer of the train * * *, provided, * * * (as in Nebraska).

New Jersey, L. '03:257, Sec. 39— * * * provided, said company at the time furnished seats inside its passenger cars sufficient for the proper accommodation of its passengers.

New York, R. S. '06, III, p. 3103— * * * posted up * * * inside of the passenger cars, then in the train, if there shall be at the time sufficient room for the proper accommodation of the passenger inside such passenger cars.

Annotation—34 N. Y., 670 (1866), what constitutes such accommodation.

North Carolina, R. S. '05, Sec. 2628— * * * (as in New York).

North Dakota, R. S. '05, Sec. 4290— * * * of the passenger cars, then in the train, * * * provided, * * * (as in Nebraska).

Oklahoma, R. S. '03, Sec. 1050—(As in New York.)

South Dakota, C. C. '03, Sec. 522—Provided * * * (as in Nebraska).

Utah, R. S. '07, Sec. 450—(As in Nevada.)

POLICE POWERS OF RAILROAD EMPLOYEES.

VII. A. Members of train crew as peace officers.

VIII. B. Special officers.

To enable railroad companies to enforce such legislation certain of their servants may be invested with police power. The statutes in relation to this may be separated into two kinds. On the one hand, it may be declared that a conductor or brakeman shall have the powers of a peace officer while on duty; on the other hand, it may require that a commission be issued by the state administration to each person whom the railroad company desires to employ as or to have the powers of a police officer.

VII. A. MEMBERS OF TRAIN CREW AS PEACE OFFICERS.

(Twenty-one states.)

Since this report is concerned with the protection of life on railroads, certain statutes merely giving power to arrest persons gambling or swindling on the trains have been omitted.

Alabama, Code '07, Sec. 5492—Conductors on passenger trains shall have all the powers and duties of a police officer, while on duty. They shall eject all disorderly persons.

Florida, R. S. '06, Sec. 3659—Passenger conductor has police powers while on duty.

Georgia, R. S. '95, Sec. 902—Conductors of passenger trains shall have police powers while on duty.

Idaho, Pen. C. '01, Sec. 5108—Conductor or person in charge of any train, section foreman or station agent have power to arrest without warrant any person disturbing the peace of any traveler on train or breaking or tampering with railroad property or freight.

Illinois, R. S. '05:114, Sec. 105—Conductors of passenger trains have police power while on duty.

Indiana, R. S. '08, Sec. 2013 and Secs. 5269-70—Conductors of all trains or cars carrying passengers or freight in this State, while on duty, may arrest without warrant any person violating any law of this State.

Kansas, R. S. 01, Sec. 2415—Conductors, brakemen, firemen and engineers of railroad trains are given power to arrest persons stealing ride.

Maine, R. S. '03:52, Sec. 81—The conductor of any train of cars may arrest all persons guilty of a breach of the peace.

Michigan, R. S. '97, Secs. 6288-9—Conductor on any train shall have the powers of a sheriff, while on duty, to suppress disorderly conduct by passengers.

Minnesota, R. S. '05, Sec. 5027—Conductor of a railway train may arrest passengers for disorderly conduct, or persons who to avoid paying fare are riding on a car not commonly used for passengers.

Montana, L. '99, p. 150, Sec. 3—Every conductor, engineer or other person in charge of a train shall have powers of a constable while on duty, provided such a person is an American citizen and shall have been a citizen of this state for at least one year next preceding any use of such power.

- Nebraska, L. '07:168, Sec. 2—Conductor of any train has power to arrest person stealing ride.
- North Dakota, R. S. '05, Sec. 4403—All conductors, engineers, brakemen and other persons engaged in the operating of the cars of any railroad are peace officers when on duty.
- Ohio, R. S., Sec. 5516—The conductor of every train carrying passengers has the power of a police officer while on duty. May arrest passengers for disorderly conduct. May wear the badge of a special policeman.
- Oregon, L. '03, p. 138, Sec. 2—Enabling conductors, brakemen, firemen and engineers to arrest persons stealing ride.
- South Carolina, R. S. '02, II, Sec. 482—Conductors of railroad trains while on duty have common law powers of constables to make arrests on board their respective trains.
- South Dakota, C. C. '03, Sec. 549—Conductors of passenger trains have the powers of the sheriff.
- Utah, R. S. '07, Sec. 4638—The conductor or other person having charge of any railroad train has power to arrest any person disturbing the peace of a traveler or committing any offense against the laws of this state while traveling on the train.
- Virginia, R. S. '04, Sec. 1294d, Par. (10)—While on duty conductors of railroad trains are conservators of the peace over the premises and property of the railroad.
- West Virginia, R. S. '06, Sec. 4281—Conductor every train of railroad cars has powers of a conservator of the peace while on duty.
- Wisconsin, R. S. '96, Sec. 1817a—The conductor of a passenger train may arrest a disorderly passenger.

Examination of the above summary shows that the powers are expressly limited to the conductors on passenger trains in seven of these states, viz.: Alabama, Florida, Georgia, Illinois, Ohio, South Dakota and Wisconsin. Eight of the others (Indiana, Maine, Michigan, Minnesota, Nebraska, South Carolina, Virginia and West Virginia) give power to conductors only of all trains, while the remaining six (Idaho, Kansas, Montana, North Dakota, Oregon, Utah) give power to other persons of the train crew. It may be noted that these last all lie in what is called the far West. The citizenship proviso of Montana is noteworthy.

VIII. POLICE POWERS OF RAILROAD EMPLOYEES.

B. Special Officers. Instead of declaring that certain employes are to have police powers by the fact of being in the execution of certain duties, some statutes require official appointment of some kind for each person whom a railroad company desires to employ as a special officer. There are here two essentially different ways of appointment: (1) The railroad may be given authority to appoint such officers as it pleases, or (2) the company must apply to some civil administrative authority requesting that such a person be commissioned. In any case such a person must wear a badge—except when on detective duty—and receive his pay from the railroad alone.

(1) Four States. The exercise of powers of such officers is confined to the premises and property of the railroad employing them.

North Dakota, R. S. '05, Secs. 9750-55—Company civilly liable for abuse of power by policeman.

Oklahoma, R. S. '05, Sec. 1065.

South Dakota, C. C. '03, Sec. 548—Company responsible for official acts of such officer.

Wisconsin, R. S. '98, Sec. 1861a.

(a) Sixteen States, One Territory. The powers of such officer terminate when the company files notice at proper place that his service has been dispensed with.

Arizona, L. '01:76—Governor appoints, and may revoke commission at pleasure. Powers of police officer on premises of the railroad; company is responsible for abuses.

California, L. '01, Mar. 23— * * * (as in Arizona).

Connecticut, L. '07, p. 620—Governor appoints and may revoke commission at pleasure. Officer has power of policeman upon premises, land and property of railroad corporation.

Delaware, L. '03, p. 128—Governor appoints. Officers have power of a county constable over the premises.

Kentucky, L. '06:62—Governor appoints such officer, who must give bond. Has power of sheriff or constable on trains or about depots of the railroad against persons committing public offenses.

Maryland, R. S. '04, p. 702, Sec. 402—Governor appoints and may revoke commission at pleasure. Officer has powers of constable in counties and cities in which premises of railroad lie.

Massachusetts, L. '06:463, I, Sec. 49—Appointed by mayor or selectmen of a city or town in which the railroad has a passenger station. Copy of record of appointment to be filed with clerk of every other city or town in which officer so appointed is to act. He has power to preserve order on premises or cars of company.

New Hampshire, R. S. '01:160, Sec. 29—Local authorities of a city or town where the railroad corporation has a passenger station appoint. Copy of record must be filed in each city and town through or into which the railroad runs and in which such officer is to act. Police powers to keep order and arrest disorderly persons or those offending against laws of state, within and about the premises and cars of the corporation.

New Jersey, L. '04:177, Sec. 2—Governor appoints. Powers of policemen and constables in counties through which railroad passes.

New York, R. S. '06, Sup. IV, p. 1255—Governor may appoint conductors or brakemen on passenger trains as policemen with power to arrest all persons committing offenses on land or property of railroad. He may also appoint special policemen with like powers.

North Carolina, R. S. '05, Secs. 2605-10—Governor issues commission, a copy of which must be filed with the clerk of each county through which the railroad runs. Officer has powers of a policeman in such counties.

Ohio, R. S. '05, Sec. 5510—Three-year commission issued by Governor, who may revoke. Such officer must be a citizen of Ohio, and shall have police powers on premises of the company or elsewhere when directly in discharge of duties for said company.

Pennsylvania, Purdon's R. S. '03, III, p. 3544—Governor appoints. Copy of oath and commission must be recorded in every county through which the railroad runs. In such counties said officer has the power of a policeman of the city of Philadelphia.

Rhode Island, L. '02:972—Governor appoints and may revoke commission at pleasure. Police powers within and upon premises and cars. Company responsible for abuse.

Vermont, R. S. '06, Sec. 4512—"The selectmen of a town may" appoint * * * Copy of record of appointment must be filed with Secretary of State. Officer has police power over premises and property of the railroad company, which is liable for his official misconduct.

Virginia, R. S. '04, Sec. 1294d, Par. (10)—Railroad company may appoint with the approval of the circuit court over any county through which the railroad may pass. May exercise within the state all powers of constable or police officer in all cases involving the rights of the railroad.

West Virginia, R. S. '06, Sec. 4281—Governor appoints and may revoke commission at pleasure. Copies of oath and commission must be filed with Secretary of State and in each county through which the railroad passes. In each county such officer has powers of a conservator of the peace.

Certain features of these provisions may be summarized as follows: In Arizona, California, Connecticut, Delaware, New Hampshire, New York, Rhode Island and Vermont the special officer may exercise his powers only on the premises or property of the railroad company; in Kentucky only on the cars or about the depots. In Maryland, Massachusetts, New Jersey, North Carolina, Pennsylvania and West Virginia his precinct widens out to the counties or towns in which the railroad lies. In Ohio he may act "elsewhere" than on the premises "when directly in discharge of duties," and in Virginia he may act for the company within the state.

IX. References to statutes specifically saying that if the fences and guards on the right-of-way be secure the railroad company shall not be liable for damages on account of trespasses thereon unless such injury be done wilfully and negligently by the railroad company or its servants.

Colorado, L. '02:1, Sec. 2.

Delaware, L., Vol. XXI, p. 479, Sec. 84.

Illinois, R. S. '05:114, Sec. 62.

Indiana, R. S. '08, Sec. 5442.

Kansas, R. S. '01, Sec. 5863.

Kentucky, R. S. '03, Sec. 813.

Louisiana, R. S. '04, p. 1498.

Michigan, R. S. '97, Sec. 6288-9.
 Missouri, R. S. '06, Sec. 1105.
 Nebraska, R. S. '03, Sec. 10020.
 New Jersey, L. '03:257, Sec. 21.
 New York, R. S. '06, Vol. III, p. 3081.
 Tennessee, R. S. 1896, Sec. 1588.
 Vermont, R. S. '06, Sec. 4456.
 Virginia, R. S. '04, Sec. 1294d, Par. (14).
 Wisconsin, R. S. '98, Sec. 1810.

(Sixteen states.)

Note. In connection with the liability of the railroad if it take specified precautions the law in Tennessee is not such as to be advantageously put under the preceding headings, and accordingly is summarized here as follows:

Tennessee, R. S. '06, Sec. 1574—"In order to prevent accidents upon railroads, the following precautions shall be observed":

(1) and (2) signs at crossings, bell and whistle.

(3) to whistle for town from one mile out and at short intervals.

"(4) Every railroad company shall keep the engineer, fireman, or some other person upon the locomotive, always upon the lookout ahead; and where any person, animal or other obstruction appears upon the road, the alarm whistle shall be sounded, the brakes put down, and every possible means employed to stop the train and prevent an accident."

Sec. 1576. "No railroad company that observes, or causes to be observed, these precautions shall be responsible for any damage done to person or property on its road. The proof that it has observed said precaution shall be upon the company." (1907.)

ENGLISH LAW.

31 and 32 Vict. (1868), C. 119, Sec. 23—

"If any person shall be or pass upon any railway, except for the purpose of crossing the same at any authorized crossing, after having received warning by the company which works such railway, or by any of their agents or servants, not to go or pass thereon, every person so offending shall forfeit and pay any sum not exceeding forty shillings for every such offense."

This act is called or may be cited as "the regulation of railway acts"; it is entitled "An act to amend the law relating to railways," and was passed July 31, 1868. It is cited in Boyle and Waghorn, an English work of 3 vols. (published in 1901), on the Law of Railways and Canal Traffic, vol. 2, page 241, and in Shelford, an English work of 2 vols., on the Law of Railways, vol. 1, page 403.

FRENCH LAW.

Walking on Right-of-Way of Railroads.

December 30, 1895.

Circular to the Companies.

For some years the companies have directly issued permits to walk on the tracks to a certain number of agents of different administrations and other individuals entrusted with special work.

This way of proceeding is not regular and I have recently called your attention to the fact that the superior administration alone is qualified to give such authority after consulting the board of control, no matter whether the applications are of a special or a general character.

It seems to me, however, that an exception to this rule is admissible in favor of certain postal officials, who have a great interest in using the tracks in order to give quicker service.

I herewith authorize you, in order to avoid complications in correspondence and waste of time, to deliver direct, as in the past, to letter carriers permits to walk on your tracks for the distribution of telegrams. It is understood, however, that these permits shall be countersigned by the chief of service who applies to you for them, and that they shall be granted at the risk and peril of the bearers, who have to conform with the rules of precaution made for them, without any liability for your company in regard to any accidents which may result from this unusual traffic.

June 17, 1896.

Circular to the Companies.

It frequently happens that certain agents belonging to the public administration, and even private persons, need to enter on the right-of-way of the railroad in order either to shorten a route they have to go every day or to apply themselves to special study or work. Up to the present time the numerous applications to this effect were acted upon either by ministerial decisions or by prefectoral orders, subject to approval by the minister; but it has been found that the interference of the superior administration in every case of this kind caused correspondence and loss of time all the more objectionable, as the applications referred to were in most cases of an urgent character.

In consequence of a request by the director of the French geological survey, a ministerial decision dated October 10th last, has already authorized the companies to issue direct and on certain conditions such permits to walk on the tracks as are requested by this official for his assistants. A similar exception has been granted in favor of postal employes by decision of December 30th.

It appears useful to me to enlarge this measure in order to simplify the correspondence and remedy the inconvenience above referred to. I, therefore, authorize you, after advising the Inspector-General of control, to deliver passes for walking on the right-of-way of the railroads of your line, every time such are requested of you by the chiefs of service of the various public administrations. All walking passes should be countersigned by the Chief of Service who applies to you for them, and they shall be granted only at the risk and peril of the bearers, who have to conform with the rules of precaution made for them without any liability for your company in regard to any accidents which may result from this unusual traffic. I only reserve the right to act on applications by private parties.

(From Fleury's Code de Chemins de Fer, pp. 150-151.)

VARIOUS POLICE REGULATIONS CONCERNING TRAFFIC, TRANSPORTATION, RAILROAD STATIONS, ETC.

Art. 57 of the regulation of 1846-1901 forbids any person not belonging to the railroad service to enter upon its right-of-way; to bring animals thereon or to allow any animals which he is guarding to enter; to cause vehicles to drive or stand thereon; to throw or deposit any object thereon. Offenses are punished by the penalties provided by Art. 21 of the law of 1845.

To third parties, and particularly to victims of accidents or owners of killed cattle, the company is liable for damages brought about by the irregular introduction of people, vehicles or animals on the tracks, when such introduction has taken place at a grade crossing where the rules of the regulations have not been complied with. But, according to law, the introduction at any other point does not involve any liability of the company, even if the enclosure was in bad condition, for this enclosure is required in the interest of the railroad and not in that of third parties.

When any person not in the employ of the railroad has entered the right-of-way, he should be immediately ejected.

Art. 63 of regulation, 1846-1901—Exception is obviously made for the officials of control, for passengers provided with tickets, for shippers and consignees of goods in the places set apart for their use, and for persons authorized according to regulations by the proper chiefs of service.

Standing upon street car tracks is also prohibited; on the approach of a train every driver of vehicles or cattle shall vacate the space necessary for their passing. (Art. 35, decree of 1881-1900.)

Boarding railway trains without tickets is also forbidden; this measure does not apply in a general way to street cars, as in many cases the fare is collected only during the ride. On railroads, as well as on street car lines, the passengers are prohibited from passing from one car to another, from leaning out, from stepping off cars before the train stops, from smoking, from boarding the cars in an intoxicated condition, or with loaded firearms, or with bulky packages, and from bringing in dogs. Special cars may, however, be reserved for smokers, passengers accompanied by dogs, etc. On main lines the companies have also to reserve cars for ladies traveling alone, when so desired by the minister. (Art. 32 of rate regulations.)

(Colson's Legislation Des Chemins De Fer, pp. 125-126.)

VII. REGULATIONS CONCERNING PASSENGERS AND PARTIES NOT EMPLOYED BY THE RAILROAD.

Art. 61: Any person not employed by the railroad is prohibited:

From entering upon the railroad right-of-way (or enclosure) and walking or standing thereon;

From throwing or placing any materials or objects of any description thereon;

From bringing within the right-of-way horses, cattle or animals of any kind;

From running or stationing upon the right-of-way any vehicles, cars or engines not belonging to the railroad.

Art. 62: From the prohibition in the first paragraph of the preceding article are excepted: Mayors and assistants, commissaries of police, officers of the gendarmerie, gendarmes and other public safety agents, customs and revenue officials, rural guards and foresters. In pursuit of their duty and clothed in their uniforms or having their badge of office. In all cases the officials and agents referred to in the preceding paragraph have to conform to the special precautionary measures which may be decided upon by the minister with the company's consent.

Art. 63: It is forbidden:

(1) To enter the cars without having procured a ticket as well as to take a place in a car of other class than that indicated on the ticket;

(2) To enter or leave the cars otherwise than through the door facing the outside of the railroad line;

(3) To pass from one car to another, or to lean out;

(4) To use, without plausible motive, the alarm signal placed at the passenger's disposal to summon the employes of the company.

Passengers shall not leave the cars except at stations and after the train has been brought to a full stop.

Smoking is not allowed in the cars or on the cars and in stations; exceptions to this rule may, however, be granted on application of the company and under special precautionary measures.

Passengers shall obey the directions given by the company's agents for enforcing the above regulations.

(From Fleury's Railway Code, pp. 70-71.)

FRENCH ORDINANCE OF 1846, ART. 61, AND COMMENTARY.

Art. 61, Par. 1. "A railroad station is not to be regarded as a public place, because in the terms of this article any person not employed by the railroad is prohibited from entering upon its right-of-way and from standing or walking thereon." (Police Court of Reims, Feb. 28, 1879, B. 121.)

To begin with, it is proper to compare with this prohibition Article 68 of the same ordinance, which gives to it its real meaning from a double point of view.

First. This second article removes any doubt as to the legality of the use of forcible means by railroad employes, which point has already been mentioned in a general way in connection with article 25 of the law of 1845, in the particular case of the prohibitions set forth in article 61, p. 1, ordinance of 1846. In fact, said art. 68 explicitly makes it the duty of the employes immediately to expel from the railroad's right-of-way any person entering it without a right to do so; furthermore, it gives the employes the right to secure the assistance of the agents of the public authorities in case of need.

Second. This same article 68 shows that the provisions of article 61, p. 1, apply as well to standing or walking on the track proper as to standing or walking "upon any part whatever of its accessories."

In regard to this provision, the legal interpretation of the administration is more lenient than that of the judicial authority, at least such as would result from the following decision:

"The provisions of art. 61 are conceived in a manner so general and so absolute that but for some rare exceptions made in art. 62 in the in-

terest of the police, this prohibition comprises any person not in the railroad's service, without any distinction whatever.

"As a logical consequence, such provisions, in order to remain effective, necessarily include prohibiting any entrance permission to persons not employed by the railroad. This right to grant permission does not belong to the supervising official of the administration, nor to the station master, nor to any one." (Court of Montpellier, June 24, 1850.)

This principle is certainly the one which has guided the legislator, and should not be lost sight of even while departing a little from it in practice and in a given case. It has been re-examined by the judiciary in the following case, which deserves mentioning in several respects:

At the moment a train entered a station a passenger drops his hat on the track; he asks permission of the station master to go and look for it; the latter grants his request and sends a workman with him, thus evidently providing everything demanded by caution and safety. Frightened unreasonably by the opening of an engine blow-off, the passenger loses his head, falls under the wheels of a backing train and is killed. The station master, when tried for manslaughter through carelessness, was acquitted by the criminal court:

"A current practice, permitted by a ministerial letter and furthermore founded on the requirements of the service, allows the superior official of the companies, and consequently the station masters, to grant access to the railroad's right-of-way to persons not connected with its operation.

"This practice has been legally approved by the special regulations for guards, providing that the guards shall prevent any outside persons from standing or walking on the railroad or its right-of-way unless they are provided with a permit.

"This (internal) regulation proposed by the company and approved by the minister of public works is valid and binding, in the sense of art. 60, ordinance of 1846.

"It contents itself with determining the duties and obligations of the employes, without contradicting or infringing on the prohibition enacted by art. 61, which only concerns passengers and persons not belonging to the railroad.

"There exists no discrepancy between the authorization of the said (internal) regulation and the prohibition of art. 61.

"These two regulations, distinct by their nature, origin and purpose, both issued by two equally competent authorities, and confirmed by penalties of an entirely opposite order, presume and govern different assumptions; they can very well exist at the same time and agree with each other.

"The one simply refers to railroad service and operation, while the other has for its object the protection and safety of the passengers.

"No abrogation, either partial or implied, of the ordinance of 1846 can be found in the right of authorization given by the minister of public works to the principal officials of the companies.

"It is evident that the station masters should use this right only with much caution and discretion.

"They are always held responsible and are always under the obligation of giving an account of their conduct either to their supervisors or to the courts, according to the gravity of the case." (Tribune of Tarascon, Feb. 11, 1862; Court of Aix, June 15th.)

From a practical point of view, this solution by the judiciary would certainly be noteworthy, but from the legal point of view it is entirely erroneous, particularly as far as art. 60 is concerned, as may be seen in the commentary to the said article.

In a matter where sometimes leniency is very difficult to avoid a distinction should be made between walking on the tracks proper and walking in the interior of stations. In the first case, the prohibition should be absolute (see, on this subject, the commentary on art. 62); but in the second it is proper to let a certain leniency prevail; thus a single and incidental permission granted by an agent of the company entitled to do so should not be subjected to court proceedings.

The judicial authority tends, however, when some offense against a regulation of the ordinance of 1846 is brought before it, to attach to it, on the slightest pretext, an offense against art. 61, p. 1, resulting from the irregular presence of the defendant on the railroad right-of-way. I shall have occasion to mention several such cases, without, however, entering into any length of detail, inasmuch as this alleged additional offense is in most cases insufficient to repress the principal offense.

On the contrary, I will only mention here the prosecution of a passenger boarding a moving train, while descending only from a train in motion is forbidden (art. 63 of ordinance 1846). The public minister wanted to have the passenger considered as offending against art. 61, p. 1; the court of appeals having refused to commit this error (court of Metz, Jan. 27, 1864), he brought the question before the regulative court, which answered (March 31st):

"The decree of the court of appeals states that the passenger, when he entered the station, was provided with a ticket which entitled him to do so, and that on perceiving that the train was already moving, he jumped on a car in order not to miss the train.

"By deciding, in the presence of these facts, that the passenger had not acted contrary to art. 61, p. 1, of the ordinance of 1846, the said decree has interpreted it sanely and legally."

The defense of art. 61, p. 1, "does not concern the parties who, in any capacity, take part in the company's service, for construction as well as for maintenance and operation of the railroad. During the course of work it is impossible to consider as foreign to the employ of the company a contractor or a laborer working on the grounds and in the interest of said company, under the direction and supervision of its direct agents." (Court of Grenoble, August 6, 1892.)

This decision was made in reversing the *Tribune Gap* (June 23d) which by application of said art. 61 had found guilty the driver of a contractor laying a second track for a company; this driver had erroneously and to no purpose driven his team near the tracks in operation, and a train had struck two horses; he had committed a mistake, but no offense against the regulation of the public administration.

Nevertheless, there is a possibility of diverging opinions what concerns "the service of the railroad," as is seen from the commentary on art. 70 in regard to restaurants.

The contract between a company and its contractor for transfer service "confers the right of entering on the right-of-way neither to the contractor nor to his employees. Art. 61, p. 1, prohibits such entering for any person

outside the service of the railroad. Thus said contractor and his coachman, not belonging to this service, have no right whatever to intrude themselves on the platform at the arrival of trains or to go close to the car doors to offer their services to the passengers leaving the cars without distinguishing between those who have transfer tickets for the contractor's carriages and those who have none." (Court of Caen, May 2, 1870; 1871, 70.)

X, having the intention of taking advantage of a train already at the station and finding the waiting room door closed, climbs through the window on the track side and jumps on the platform. This fact is characteristic of an offence against art. 61, p. 1 (having entered upon the railroad's right-of-way and having stood there). (Tribunal of Mhouse, Aug. 4, 1868, 1869, 255.)

A passenger, in spite of repeated warnings by the employes, climbs over the counter on which the baggage is received and crosses the space reserved for weighing and handling baggage. "The prohibition in art. 61, pp. 1, extends to those accessories of the line which are closed to the public on account of the necessities of the service. In particular, it applies to such parts of stations to which passengers are not allowed access by the internal regulations; it is sufficient that passengers know the prohibition to make their refusal to abide by it liable to punishment." (Court of Aix, March 6, 1884; B. 95.)

Any one passing with a loaded horse over a grade crossing where pedestrians only have the right of passing acts contrary to art. 61, pp. 1 (Tribunal of Mont-de-Marsan, Aug. 5, 1868; 1870, 7.)

The fact of entering the right-of-way of a railroad and cutting grass there to the detriment of the company constitutes two offenses: One is that of entering on the right-of-way, art. 61, pp. 1, ordinance of 1846, and the other is provided for in art. 388 of the criminal code (fraudulent abstraction of crops not yet detached from the soil). The former naturally vanishes before the latter, the penalty for which is higher than that pronounced by art. 21 of the law of 1845. (Tribunal of Dax, June 25, 1868; 1869, 120.)

The fact of entering upon the right-of-way of an industrial road, breaking down part of its enclosure, in order to cut wickers in a willow plantation belonging to the said road constitutes, outside of the offense against railroad legislation, the offense covered by art. 456 of the criminal code (breaking down enclosures) and the attempt at the offense covered by art. 401 of the same code (fraudulent appropriation), said attempt manifested by the beginning of its execution and having failed only by circumstances independent of the will of its author. At the moment when the arrested man was surprised by a gate guard he had already cut 96 wickers. (Tribunal of Chalons-sur-Saone, July 3, 1879; 1880, 123.)

To be sure, he was a "person foreign to the railroad service" on account of which then he was "forbidden from entering upon the right-of-way of said road," like the stranger of the kind mentioned in the commentary on art. 63, pp. 3, of ordinance of 1846. This stranger had thus acted contrary to art. 61, pp. 1, which was quite sufficient for the punishment of his unusual enterprise.

A wine shipper enters a freight house furtively and at night in order to "substitute four half-barrels of unadulterated wine for four half-barrels

of adulterated wine which were at the freight house addressed to a consignee" with whom he had a lawsuit on account of this adulteration, the wine being sequestered there. This shipper was prosecuted in criminal court for offense against art. 61, pp. 1, of the ordinance of 1846, insofar as he had entered said freight house without permission.

Another man, who was also arrested, "had stayed for part of the night in said freight house, to the sole purpose of standing guard and distracting the attention of the chief of the night service from the things that were going on there. He had thus made himself an accomplice, by aid and assistance, to the offense committed by the shipper. (Tribunal of Chateaudun, May 21, 1887.)

It is to be observed in regard to this latter case that the tribunal invoked in the following precise terms the principle of criminal law which I have had to call attention to in connection with art. 21 of the law of 1845:

"The law on the railroad police containing no formal derogation of art. 59 and following of the criminal code, there is reason for deciding that infringements on this law as far as complicity (of the second party arrested) is concerned should be classified as offenses and not as simple police misdemeanors.

"X, contractor for the painting work on a section of railroad in operation, and insured by a company against all kinds of bodily accidents from an external, violent and involuntary cause, is crushed at a station by a train which he was about to take and in front of which he passed in haste after giving instructions to his workmen.

"To evade payment for this accident the insurance company alleges that, by a clause in its policy, it is relieved of all liability when the insured has committed an infringement on public laws and regulations, and that X had committed such infringement in crossing the track in spite of the warnings of the station master. "This contention is unfounded. No railroad regulation prohibits passengers desirous to take a train from crossing the tracks. X can only be considered and has acted only as a passenger wanting to board a train. The warning of the station master was only an officious warning in order to prevent an accident; it had no other purpose and no other effect than to diminish or cancel the responsibility of the railroad company and has nothing to do with the insurance company which guarantees against accidents.

"Art. 61, p. 1, of the ordinance of 1846, in no way applies to the cause. The insurance contracts are strictly legal contracts and one cannot extend the penalties from one case to another. The verdicts invoked refer to cases where the insured had acted contrary to a formal order contained in a public regulation." (Tribune at Chaumont, December 12, 1888.)

A pedestrian gains access to a track through an opening in the hedge serving as enclosure, and is injured by a train. Although simply a victim of his own imprudence, he enters suit against the company, but is overruled in his demand for damages.

How can the tribunal, in recalling that the enclosure required along railroad tracks is so only in the interest of the railroad, say that it is so by the ordinance of 1846, while this regulation contains nothing regarding enclosures along tracks, but art. 61, p. 1, against which said pedestrian had offended. (Lille, Dec. 27, 1888; 1889, 93.)

A child ten years of age taking advantage of the circumstances that a freight train is running no faster than a man can walk tries to climb upon one of the cars, falls and is crushed by the following car. The company when sued by the father of the victim is declared irresponsible for this accident (Tribunal at Lille, March 6, 1890; B. 58), to which would not have occurred if the father had taken care that his son had not committed the infringement which cost his life.

(From Fleury's Code de Chemins de Fer, pp. 144-148.)

GERMAN EMPIRE.

Regulations Governing Construction and Operation of Railroads, Nov. 4, 1904.

(In force from May 1, 1905.)

VI. REGULATIONS FOR THE PUBLIC.

77. *General Regulations:*

Passengers and the public in general shall conform to such general regulations as are made by the railroad management for the purpose of preserving order within railroad property and in railroad operation, and shall obey the directions of railroad policemen in uniform or provided with badges or other proof of their official capacity.

78. *Entering on Right-of-Way:*

(1) Entering the right-of-way without a pass card on main tracks, excepting such parts of it as may be set aside for use as roads, is only permitted for

- (1) Inspection officials and their representatives;
- (2) Officials of the office of the Attorney-General, the courts, the Forestry service and the police, when necessary for the performance of their duty;
- (3) Telegraph, customs and revenue officials, as far as necessary for the performance of duty within railroad property.
- (4) Officers of the German army and navy, when on inspection duty.

(2) Entering the station premises, outside of the parts open to the public by regulation, without a pass card, is permitted to the persons named above and also to postal officials, as far as the postal service is handled within the station premises.

(3) Officers and uniformed officials belonging to German posts are permitted to enter railroad property within the extreme limits of the range of the forts' artillery.

(4) Persons entitled to enter upon railroad property, if not recognizable by their uniform, have to show a proper legitimation upon request.

(5) Pass cards for entering railroad property shall be issued only with the consent of the inspection office.

(6) Those entitled to entering railroad property have to avoid staying on the tracks.

(7) The maintenance of order on the places in front of stations is the duty of the railroad police, unless otherwise provided by special regulations.

(8) The responsibility for animals entering railroad property lies with the party to which the care of the animals is entrusted.

(9) Where the tracks also serve as road they are to be vacated on the approach of a train.

79. Crossing the Tracks:

(1) The public is allowed to cross the tracks only at places designed as crossings, and only as long as these are not closed by gates or no train is approaching. In crossing the tracks any unnecessary lingering shall be avoided.

(2) Plows and harrows, tree trunks or other heavy objects when not carried may only be taken over the tracks on trucks or sleds.

(3) Private crossings may be used only by those entitled to their use, and only on the conditions accepted by the inspection office.

(4) It is prohibited to open or cross the gates or other fencing, or to place or hang anything thereon. As long as the crossings are closed, or when the bell rings at crossings provided with lifting gates, or when a train approaches, vehicles and animals must be stopped at the warning signs, or where such are not provided, in suitable distance from the tracks. Pedestrians are allowed to approach up to the gates at crossings where such are provided.

(5) The crossing of tracks by cattle droves of any considerable size must be discontinued ten minutes before the scheduled arrival of a train.

80. Damaging the Road and Disturbing Its Operation:

It is prohibited to damage the tracks, operating contrivances or rolling stock, to place objects on the tracks or cause other obstructions to traffic, to throw switches, cause false alarm, imitate signals or perform other acts disturbing railroad operation.

81. Regulations for Passengers:

(1) Passengers are allowed to enter and leave trains only at the places and on the side thereto assigned.

(2) As long as a train is in motion it is prohibited to open car doors, to enter or leave cars, to attempt or give aid to such action, and to stand on steps or platforms unless staying on them is explicitly allowed.

(3) It is prohibited to throw objects out of the car through which people might be injured or objects damaged.

82. Penalties for Violation:

(1) Whoever violates the regulations of paragraphs 77 to 81 will be fined up to \$25.00 unless a higher penalty is provided by the penal code.

(2) The same penalty applies to any one violating the provisions of the operation regulations in regard to objects, the bringing of which into passenger cars is prohibited.

83. Posting of Regulations:

A copy of paragraphs 75 and 77 to 82 of these regulations, as well as of the regulations in regard to objects, the bringing of which into passenger cars is prohibited, shall be posted in every waiting room.

APPENDIX V

Tariff Report

Department of Tariffs and Rates

INDIANAPOLIS, December 14, 1908.

To the Railroad Commission of Indiana, Indianapolis, Ind.:

Gentlemen—I have the honor to submit herewith report of your Department of Tariffs and Rates from December 1, 1907, to and including November 30, 1908, as follows:

IN GENERAL.

Following the financial panic of November, 1907, a general depression in trade and traffic conditions pervaded the country, and during the first half of the present year its effect was quite apparent on the tonnage of the state, but during the close of the year the industrial health of the state has shown marked improvement, with a consequent visible effect upon traffic. From information before your traffic department, it is enabled to report a substantial increase in local and an increasing improvement in through traffic. From time to time rumors have been rife of a general increase in rates by the carriers, but up to this time only a few specific increases have been made, and those increases have not, so far as is apparent, worked any hardship upon the shippers affected. Through negotiations with the carriers many decreases in rates have been effected, notably on logs, lumber, cross ties, gravel, crushed stone, and other commodities of that class. Perhaps the most important steps towards the raising of gross revenue on any particular class of shipments was the raising of the carload minimum weight on scrap iron from fifteen to twenty gross tons per car. With the exception of one complaint by a local shipper, no objection to the increase in this minimum weight on scrap iron has been brought to the attention of the Commission by the shippers. There is a growing tendency among shippers to refer interstate matters to the Commission, and every effort is made in these cases to procure amicable adjustment between the carrier and the shipper, and failing in this, the shipper is notified that the matter should be brought before the Interstate Commerce Commission if further steps are contemplated by the shipper.

The report of your Department of Tariffs and Rates will be distributed under the following specific heads:

TARIFFS. Rules and regulations governing the construction and filing; system of registering and filing; rules now in effect.

RATE ADJUSTMENTS. Applications for; case reports.

REFUNDS. Applications for approval of; case reports.

RATE REDUCTIONS. Applications to publish on less than statutory notice.

INVESTIGATIONS. Preliminary; and reports to the Commission.

CONFERENCES. Preliminary; and reports to Commission.

RECOMMENDATIONS.

TARIFFS.

Rules and Regulations Governing the Construction and Filing of Tariffs—System of Registering and Filing Tariffs—Rules Now in Effect.

There has been no change in the rules and regulations of the Commission governing the construction and filing of freight and passenger tariffs, as embodied in Department of Tariffs Circulars Numbers A-1 and B-1, copies of which are made part of this report.

After lengthy conference with the traffic officials of the several express companies operating in this state, this Department submitted to the Commission, and issued, under the authority of the Commission, rules and regulations governing the construction and filing of express tariffs and classifications, to become effective January 1, 1909, under its Circular Number C-1, copy of which is made part hereof. These rules are complete for the filing of express tariffs in Indiana, and in all matters in which the Commission may exercise discretion under the law these rules have been made to conform as nearly as possible with the rules of the Interstate Commerce Commission.

With reference to the filing of rate schedules or tariffs by the Pullman Sleeping Car Company, the Commission made an exception and permitted this Company to file telegraphic notice of the application of its rates, to be confirmed by regularly published tariff, and the tariffs of that Company are now tendered for filing in that shape.

The tariffs as received are registered in an official record kept for that purpose, receipt of same acknowledged to the carrier, the tariff stamped "Railroad Commission of Indiana, Official File." The carriers filing such tariffs are required to comply with the rules of this Department and the law of the state. The number of tariff

rejections is constantly decreasing, and the methods in general of tariff issuing show marked improvement over those of a year or so ago. Such undesirable issues, as illegible tissue sheet copies, incorrect numbers, faulty construction and mutilated tariffs, have practically disappeared. Under your General Order Number 1, requiring supervision and scrutiny of tariffs tendered for filing, your department has not been able to carry out these instructions to the best advantage because of lack of sufficient clerical force, but, in a general way, care has been given to this feature of the work, and many rejections of tariffs made in consequence of such inspection as we have been able to give.

Rule 23 of the Department's tariff rules and regulations became effective December 1, 1907, and required all carriers subject to the Railroad Commission act to publish in application of their commodity rates the long and short haul clause of the law, requiring protection of intermediate points under maxima rule. In the greater per cent. of cases the carriers have complied with this regulation, but where the carriers have failed to so publish this clause in their commodity tariffs, protection of intermediate points under that rule has been required.

On February 17, 1908, your department issued, under direction of the Commission, its Department of Tariffs Special Circular Number 1, Concerning Refunds, which will be set out at length under the subject of "Refunds."

On June 19, 1908, your Department of Tariffs issued, under the direction of the Commission, its Department of Tariffs Special Circular Number 2, effective July 10, 1908, requiring all carriers subject to the Commission act, and parties to the suit of Bash Packing Company et al., v. Southern Railway Company et al., notifying such carriers that the Appellate Court of Indiana had affirmed the scale of rates promulgated in the order of the Commission in said case, and requiring such carriers to publish the Commission scale as of the 20th day of January, 1907, the effective date of the Commission's order. The carriers complied with this Circular Number 2 in each case as to its local application, but some of the lines have not published joint rates in accordance with the order of the Commission. Said Department of Tariffs Special Circular Number 1 is made part hereof as follows:

SPECIAL CIRCULAR NO. 1.
CONCERNING REFUNDS.

To All Railroads and the Public:

The Commission is continually receiving applications for the approval of refunds. After long consideration the Commission has determined that it is without authority to change or modify the law and that it has no authority to authorize a refund in any case where the carrier may not lawfully make the same without applying to the Commission.

The Commission will continue to quote rates and to check expense bills with effective tariffs and note errors in the application of rates and the misrouting of shipments, and advise parties of results; however, it will be useless to seek authority for refunds when the traffic has moved on the effective rates and by the proper route.

We suggest that where clerical errors have been made or the wrong rate applied, or where the shipment has been misrouted, the carrier is under obligation to make correction and may lawfully do so without application to the Commission.

No traffic can move in this State except upon the published rate. It is the duty of the carriers, under the law, to at all times have in effect at all points on their lines, just and reasonable rates for the carriage of all traffic.

In case no such rates are in effect, the carrier can obtain permission to put such rates in by telegram to the Commission. Shippers should learn, before loading shipments, what the rates are and insist upon new rates where the effective rates are not just, and hold shipments until correction has been made. In all such cases the Commission will act quickly and do all the law allows it to do to facilitate shipments and to obtain reasonable and just rates before the traffic moves.

By Order of the Commission.

L. E. MORTON, Clerk.

February 17, 1908.

SPECIAL CIRCULAR NO. 2.
CONCERNING RATES ON FERTILIZERS.

INDIANAPOLIS, June 19, 1908.

To All Railroads Operating in Indiana:

In the case of Bash Packing Co. et al. v. Southern Ry. Co. et al., before the Railroad Commission of Indiana, the Commission entered an order on the 29th day of December, 1906, making effective on the 20th day of January, 1907, rates on local and joint shipments of fertilizers, in carloads, minimum weight 30,000 lbs., not in excess of the following distance scale:

Rates in Cents Per 100 lbs.

10 miles and under	3
20 miles and over 10.....	3.5
30 miles and over 20.....	4
40 miles and over 30.....	4.5
50 miles and over 40.....	5

60 miles and over 50.....	5.25
75 miles and over 60.....	5.5
100 miles and over 75.....	6
125 miles and over 100.....	6.5
150 miles and over 125.....	7
175 miles and over 150.....	7.5
200 miles and over 175.....	8
225 miles and over 200.....	8.5
250 miles and over 225.....	9
275 miles and over 250.....	9.5
300 miles and over 275.....	10
325 miles and over 300.....	10.5
350 miles and over 325.....	11
375 miles and over 350.....	11.5
400 miles and over 375.....	12
425 miles and over 400.....	12.5
450 miles and over 425.....	13
475 miles and over 450.....	13.5
500 miles and over 475.....	14

The Commission further ordered that such rates should apply both to local and joint traffic.

An appeal was prosecuted by the carriers to the Appellate Court of Indiana and that court has finally determined said cause in favor of the Railroad Commission of Indiana, and held such rates to be the legal rates in effect upon intrastate shipments of fertilizers, in carloads, in the State of Indiana, since the 20th day of January, 1907.

All railroad carriers operating within the State of Indiana, over whose lines fertilizers in carloads are transported, or have been since said 20th day of January, 1907, are hereby required to publish and file with the Commission, in its Department of Tariffs, on or before July 10, 1908, proper local and joint tariffs of rates on fertilizers, in carloads, in accordance with the said order of the Commission above mentioned, such rates to be made effective as of the 20th day of January, 1907, as required under said order.

By Order of the Commission.

L. E. MORTON, Clerk,
Department of Tariffs,
Indianapolis, Ind.

SUPPLEMENT NO. 1 TO SPECIAL CIRCULAR NO. 2. CONCERNING RATES OF FERTILIZERS.

JUNE 30, 1908.

To All Railroads Operating in Indiana:

Please refer to Department of Tariffs Special Circular No. 2, issued by the Railroad Commission of Indiana, June 19, 1908, concerning rates on fertilizers, in carloads, and be advised that said circular and the order

of the Commission therein mentioned apply only to the following named carriers:

Southern Railway Co.;
 Cleveland, Cincinnati, Chicago & St. Louis Ry. Co.;
 Pittsburgh, Cincinnati, Chicago & St. Louis Ry. Co.;
 Pennsylvania Company;
 Vandalia Railroad Co.;
 Baltimore & Ohio Southwestern R. R. Co.;
 Chicago, Indianapolis & Louisville Ry. Co.;
 Lake Shore & Michigan Southern Ry. Co.;
 New York, Chicago & St. Louis R. R. Co.;
 Illinois Central R. R. Co.;
 Southern Indiana Ry. Co.;
 Wabash Railroad Co.;
 Grand Rapids & Indiana Ry. Co.

By Order of the Commission.

L. E. MORTON, Clerk,
 Department of Tariffs,
 Indianapolis, Ind.

CIRCULAR C-1.

RULES AND REGULATIONS GOVERNING THE CONSTRUCTION AND FILING OF EXPRESS TARIFFS AND CLASSIFICATIONS.

Issued November 1, 1908.

Effective January 1, 1909.

TARIFFS AND CLASSIFICATIONS.

Tariffs that are lawfully on file with the Railroad Commission of Indiana on January 1, 1909, will be considered as continued in force, and until they can be properly reissued may be amended without complying with the requirements of these rules as to the number and volume of supplements, and as to showing concurrence forms and numbers. All tariffs issued or reissued on and subsequent to January 1, 1909, must conform to all of these rules. The Commission may direct the reissue of any tariff at any time. A tariff publication as to which these regulations have not been conformed to is subject to rejection by the Commission when tendered for filing.

The term "joint rate," as used herein, is construed to mean a rate that extends over the lines of two or more carriers, and that is made by agreement between such carriers.

"Joint tariffs" are those which contain or are made up from such "joint rates."

All tariffs or schedules tendered for filing with the Commission must be addressed to

L. E. MORTON, Clerk Department of Tariffs,
 Railroad Commission of Indiana,
 Indianapolis, Indiana.

Tariffs Must Be Printed.

1. All tariffs must be printed on good durable paper, from type of size not less than 6-point full face. Stereotype, planograph or other printing-press process may be used. Tariff schedules, with the body of the tariff printed as above provided, with rates filled in with typewriter or ink, may be used for filing and posting.

Form and Size of Tariffs; Sectional Form.

2. (a) All tariffs must be in book, sheet or pamphlet form, and of size 9½ by 11½ inches. Loose-leaf plan may be used, so that changes can be made by reprinting and inserting a single leaf; but if changes are so made, no other supplements to same tariff may be issued.

(b) Tariffs made up of sections, showing rates from each point to other points, may be used in lieu of the loose-leaf plan of construction. These sections may be filed under one I. R. C. number, and changes may be made by supplement to the sections affected.

Title Page Shall Show Name of Express Company, I. R. C. Numbers and Cancellations; Kind of Tariff and Reference to Classification; Date of Issue; Officer Issuing; When Issued by Permission or Order of Commission.

3. The title page of every tariff shall show:

(a) Name of issuing express company, express companies, or agent;
 (b) I. R. C. number of tariff, in bold type, in a conspicuous place at top of front page, and immediately thereunder, in smaller type, the I. R. C. number or numbers of tariffs and supplements cancelled thereby. If, however, the number of cancelled tariffs is so large as to render it impracticable to thus enter them on the title page, they must be shown on following page; but specific reference to such list must be entered on title page immediately under the number of the tariff. Serial numbers of express companies may, if desired, be entered below the upper marginal line of title page;

(c) Whether tariff is local or joint, or a combination of same;

(d) Whether merchandise, commodity, or a combination of both, and the territory or points from and to which the tariff applies, briefly stated;

(e) Reference by name and I. R. C. number to the classification and exception sheets governing the tariff. The following form may be used: "Governed by the I. R. C. No., and supplements thereto and reissues thereof."

(i) On every tariff or supplement that is issued on less than ten days' notice by permission or order or regulation of the Commission, notation that is issued under special permission or order of the Railroad Commission of Indiana No., of (date) or by authority of Rule, Department of Tariffs, Circular No. C-1.

(f) Date of issue and date effective. Any tariff may be changed upon statutory notice of ten days, or in case of reduction or new rates, upon shorter notice, under special permission of the Commission;

(g) Name, title and address of officer by whom tariff is issued;

Tariffs Shall Contain: Table of Contents; Participating Express Companies; Concurrence Numbers; Posting of Tariffs.

4. Tariffs in book or pamphlet form shall contain in the order named:

(a) Table of contents, full and complete. Except that when tariff contains so small a volume of matter that its title page or its arrangement plainly discloses its contents, the table of contents may be omitted;

(b) Names of issuing express companies, including those for which joint agent issues under power of attorney. The form and number of power of attorney or concurrence by which each carrier is made party to the tariff must be shown;

(c) Explanation of reference marks and technical abbreviations used in the tariff;

(d) Such explanatory statement in clear and explicit terms regarding the rates and rules contained in the tariff, as may be necessary to remove all doubt as to their proper application;

(e) Rules and regulations which will govern the tariff, the title and important parts of each rule or regulation to be shown in bold type. Under this head all of the rules, regulations or conditions which in any way affect the rates named in the tariff shall be entered, except that a special rule applying to a particular rate shall be shown in connection with and on the same page with such rate;

An express company or an agent may publish, under I. R. C. number, post and file a tariff publication containing the rules and regulations which are to govern certain rate schedules, and such publication may be made a part of such rate schedules by the specific reference, "Governed by rules and regulations shown in I. R. C. No."

A rate schedule may in like manner refer by I. R. C. number to another schedule for the governing rules and regulations.

A schedule or a publication so referred to must be on file with the Commission and be posted at every place where a schedule that refers to it is posted.

Rules Governing Filing of Tariffs.

5. (a) Tariffs must not be sent for filing with the Commission in duplicate;

(b) Transmittal advices *in duplicate* must accompany all tariffs, amendments or supplements thereto, tendered for filing; affording the following description thereof:

Description of Tariff; Supplements; Amendments; Sections;

I. R. C. Number;

Supplement Numbers;

Carrier's Traffic Department Number;

Date Tariffs or Supplements, etc., become effective;

(c) Receipt of tariffs tendered for filing will be acknowledged by the Department of Tariffs by stamping and returning duplicate of transmittal advice accompanying tariffs;

(d) Interstate tariffs, which do not carry intrastate rates or provide for intrastate application of interstate rates will not be accepted by the Commission for filing;

(e) If any tariff, or supplement, which is tendered for filing with the Commission refers to or becomes a part of any former tariff, or supplement, which has not been previously filed with the Commission, such tariff or supplement so tendered for filing will not be accepted or filed until the preceding tariff or supplement to which it refers, or of which it becomes a part, has been filed with the Commission;

(f) Any tariff, or supplement, which carries rates which are less for long than for short hauls, as prohibited in the Act of March 9, 1907, will not be filed unless permission to make such charges has been previously obtained from the Commission. Any tariff containing any such prohibited rates, if discovered after filing, will be removed from the files and returned to carrier without previous notice;

(g) The fact that receipt of a tariff, or supplement to a tariff, is acknowledged by the Commission, or the fact that a tariff, or supplement to a tariff, is in the files of the Commission, will not serve or operate to excuse the carrier from responsibility or liability for any violation of the law, or of any ruling lawfully made thereunder, which may have occurred in connection with the construction or filing of such tariff or supplement.

Terms Used in Tariffs Must Be Specific; Commodity Rates.

6. The term "general specials," or similar term, must not be used in any tariff for the purpose of indicating the articles to which the rates apply, unless a full list of the articles included in and covered by such term is printed in the tariff or specific reference is given to I. R. C. number of issue that contains such list.

Commodity rates must be specific and must not be applied to analogous articles.

Commodity Rate Only Rate Which Lawfully Can Be Used.

7. In every instance where a commodity rate is named in a tariff upon a commodity and between specified points, such commodity rate is the lawful rate and the only rate that can be charged by the carriers parties thereto, with relation to that traffic between those points, even though a merchandise rate or some combination may make lower. The naming of a commodity rate on any article or character of traffic takes such article or traffic entirely out of the classification and out of the merchandise rates between the points to which such commodity rate applies, and the commodity rate so named is not modified by the provisions in the classification for extra valuation charges, limitation of liability, icing charges, or any variation of the commodity rate, unless the commodity tariff provides that classification rules will govern.

Classifications and class rate tariffs shall contain the provision that wherever commodity rates are named they remove the application of the classification scale or class rates to the same commodity and between the same points.

Tariff or Supplement Shall Specify Cancellations; Cancellation Notice Must Be by Supplement; Where Rates Will Be Found.

8. (a) If a tariff, or supplement to a tariff, is issued which conflicts with a part of another tariff, or supplement to a tariff, which is in

force at the time, and which is not cancelled in full thereby, it shall conspicuously bear notation "Cancels conflicting portions of I. R. C. No." or "Supplement No.";

(b) If a tariff is cancelled with the purpose of canceling entirely the rates named therein, or when, through error or omission, a later issue failed to cancel the previous issue, and a tariff is cancelled for the purpose of perfecting the records, the cancellation notice must not be given a new I. R. C. number, but must be issued as a supplement to the tariff which it cancels, even though such tariff may at the time have two effective supplements.

When a tariff or a commodity rate is cancelled by supplement the cancellation notice must show where rate will thereafter be found, or what rate will thereafter apply. For example: "Rates inI. R. C., No.will apply," or "Merchandise rates will apply," or "Combination rate will apply," or "No rates in effect."

If a tariff is cancelled with the purpose of applying in lieu thereof the rates shown in some other tariff, the cancellation notice shall make specific reference to the I. R. C. number of tariff in which such rates will thereafter be found. Cancellation of a tariff also cancels supplement to such tariff, if any in effect. If a tariff is cancelled by the issuance of a similar tariff to take its place, cancellation notice must not be given by supplement, but by notice printed in new tariff, as provided in paragraph (b) of Rule 3.

Amendments and Supplements; Two Supplements Allowed; Reissued Items.

9. A change in or addition to a tariff shall be known as an amendment, and, excepting as provided in rules 2 and 5, shall be issued in a supplement to the tariff and shall refer to the page or pages or item or items of the tariff which it amends.

Supplements to a tariff shall be numbered consecutively as supplements to that tariff, or section thereof, and not be given separate or new I. R. C. numbers. There shall at no time be more than two supplements in effect to any tariff or section. Each supplement shall specify the supplement or supplements which it cancels, and shall also show on title page what supplements are in effect and that such effective supplements contain all changes. For example: "Supplement No. to I. R. C. No."; "Cancels Supplements Nos. and"; "Supplements Nos. and are in effect and contain all changes."

An amended item must always be printed in supplements in its entirety as amended.

A tariff, or a supplement, which contains reissued items must not bear the notation "effective at once, except as noted," but instead must bear notation "effective, except as noted in individual items;" example, "Issued: Effective except as noted in individual items." Reissued items must bear notation, "Effective (date upon which item became effective) in I. R. C. No."; or "Supplement No. to I. R. C. No."

When the effective supplements to a tariff have, in the aggregate, attained the proportions of twenty-five (25) per cent. of the pages in the original tariff, with a minimum of two pages, it must be reissued before further amendments may be made.

Tariff Must Show Icing, Switching, Etc., Charges, or Refer to Tariff Containing Same.

10. In all cases where a charge in addition to tariff rate is made for icing, switching, etc., the carrier shall either include such charge in the tariff or refer therein to I. R. C. number of the tariff wherein such additional charge will be found.

CONCURRENCES.

11. Concurrence may be given by any carrier to embrace all tariffs, schedules and classifications now issued and on file with the Commission, or which may hereafter be issued and filed with the Commission, applicable on intrastate traffic, by another carrier, or its duly constituted agent, in which the concurring carrier is shown as a participating line. This concurrence may be filed separately as to each line, or one concurrence may be filed for all lines in this State, in which latter case the lines must all be named individually in the concurrence. Upon the filing of any such concurrence the Commission will consider all tariffs, schedules and classifications effective when filed in which the concurring carrier is named as a participating line, until notice of total or partial non-concurrence is filed with the Commission by the non-concurring line, and in such case the tariff schedule or classification non-concurred in will cease to be effective ten (10) days after the filing of notice of non-concurrence, or revocation, and copy of any such non-concurrence or revocation must at the same time be furnished by the non-concurring line to the carrier issuing the tariff, schedule or classification.

This regulation shall not apply except to the tariffs, schedules or classifications issued by the carrier originating the traffic upon which the same applies.

If any carrier subject hereto does not desire to concur in tariffs and schedules issued by other lines in this State in the manner above indicated, then individual concurrences from connecting lines shown as participating lines as to all tariffs, schedules, etc., now issued, or which may be hereafter issued and filed, applicable to intrastate traffic, must be procured and filed with the Commission.

All joint tariffs or schedules filed with the Commission must be accompanied by a letter of advice to the effect that tariff it accompanies is concurred in by all carriers named therein as participants, under concurrences on file with the Commission, naming any exceptions, and supplying any concurrences required by such exceptions, in form prescribed by Rule 5, paragraph (b), herein.

Concurrence Form EI2.

12. The forms for giving concurrences in accordance with the rules and regulations in paragraph 11 hereof shall be as follows, with numbers and prefixes as indicated.

The following form will be used in giving concurrence in a tariff that is issued and filed by another express company or its agent and to which

the express company giving concurrence is a party. If given to continue until revoked, it will serve as continuing concurrence in the tariff described in the concurrence and all supplements to and reissues thereof. If provision for concurrence to continue until revoked is stricken out, a new concurrence will be required with each supplement or reissue.

To Be Filed with the Railroad Commission of Indiana.

[Name of express company in full.]

(Date)

Form EI2.—No.

To the Railroad Commission of Indiana, Indianapolis, Indiana:

This is to certify that the [name of express company] assents to and concurs in the publication and filing of the rate schedule described below, together with supplements thereto and reissues thereof which the named issuing express company or its agent may make and file and hereby makes itself a party thereto and bound thereby, until this authority is revoked by formal and official notices of revocation placed in the hands of the Railroad Commission of Indiana, and of the express company to which this concurrence is given.

Title and number: [Here give exact description of title of schedule, including number and name of series.]

Date of issue:

Date effective:

Issued by { [Official.]
[Company.]

[Title of officer.]

Concurrence Form EI6.

16. If two or more express companies appoint the same person as agent for the publication and filing of tariffs and supplements thereto under powers of attorney form EI1, concurrence in tariffs issued by him under such authority may be in the following form:

To Be Filed with the Railroad Commission of Indiana.

[Name of express company in full.]

(Date)

Form EI6.—No.

To the Railroad Commission of Indiana, Indianapolis, Indiana:

This is to certify that the [name of express company] assents to and concurs in the publication and filing of any rate schedule or supplement thereto which the [here give list of all express companies for which the agent has powers of attorney], or either or any of them, may make and file through their agent and attorney [name of agent], and in which it is shown as a participating express company, and hereby makes itself a party to and bound thereby in so far as such schedule contains rates applying via its line, and to but not from points thereon, until this authority is revoked by formal and official notices of revocation placed in the hands of the Railroad Commission of Indiana, and of the express companies to which this concurrence is given, or of their agent and attorney herein named.

[Name of express company.]

By [Name of officer.]

[Title of officer.]

Concurrence Form EI7.

17. If two or more express companies appoint the same person as agent for the publication and filing of tariffs and supplements thereto under powers of attorney form EI1, concurrence in tariffs issued by him under such authority may be in the following form:

To Be Filed with the Railroad Commission of Indiana.

[Name of express company in full.]

(Date)

Form EI7.—No.

To the Railroad Commission of Indiana, Indianapolis, Indiana:

This is to certify that the [name of express company] assents to and concurs in the publication and filing of any rate schedule or supplement thereto which the [here give list of all express companies for which the agent has powers of attorney], or either or any of them may make and file through their agent and attorney [name of agent], and in which it is shown as a participating express company, and hereby makes itself a party to and bound thereby in so far as such schedule contains rates applying via its line, and to and from points thereon, until this authority is revoked by formal and official notices of revocation placed in the hands of the Railroad Commission of Indiana, and of the express companies to which this concurrence is given, or of their agent and attorney herein named.

[Name of express company.]

By [Name of officer.]

[Title of officer.]

Concurrence Form E18.

18. If two or more express companies appoint the same person as agent for the publication and filing of tariffs and supplements thereto under powers of attorney form E11, concurrence in tariffs issued by him under such authority applying to or from certain points or territory may be issued in the following form, modified as may be necessary to confer exactly the authority intended to be granted:

To Be Filed with the Railroad Commission of Indiana.

[Name of express company in full.]

(Date)

Form E18.—No.

To the Railroad Commission of Indiana, Indianapolis, Indiana:

This is to certify that the [name of express company] assents to and concurs in the publication and filing of any rate schedule or supplement thereto which the [here give list of all express companies for which the agent has powers of attorney], or either or any of them, may make and file through their agent and attorney [name of agent], and in which it is shown as a participating express company, and hereby makes itself a party to and bound thereby in so far as such schedule contains rates applying upon; or between and; or from to; or from to points on or reached via its line; or from points on or via its line to until this authority is revoked by formal and official notices of revocation placed in the hands of the Railroad Commission of Indiana, and of the express companies to which this concurrence is given, or of their agent and attorney herein named.

[Name of express company.]

By [Name of officer.]

[Title of officer.]

19. The express companies issuing these forms will file the original with the Commission and will furnish duplicate to each of the express companies named in the concurrence, or, if each of those express companies has given said agent power of attorney to receive for its concurrences, original will be filed with the Commission and one duplicate may be filed with such agent instead of furnishing duplicate to each and every express company represented by him.

20. Concurrence, form E12, applies to individual publication named therein. Concurrence, form E13 or E16, confers authority to publish and file rates to, but not from, offices on line of concurring express company, and via its lines. Concurrence, form E15 or E17, confers authority to publish and file rates to and from offices on line of concurring express company, and via its lines. Forms E13, E15, E16 and E17 are not to be modified except as specified in the rules. The use of these several forms as provided will therefore show by the form number just what authority has been given, except when form E14 or E18 is used, these forms being provided for instances which the other forms do not exactly fit.

Numbers of Concurrences; Authorizations; Revocations; Conflicting Authorities Must Be Avoided; Authority or Concurrence Does Not Relieve Company from Necessity of Posting.

21. Each express company will give authorizations and concurrences serial numbers, beginning with No. 1 in each series, as indicated by forms, and continuing in consecutive numbers as to each series, and keeping these numbers separate and apart from the I. R. C. numbers of tariffs.

It is suggested that for convenience in reference and filing the powers of attorney and concurrences be printed in triplicate, consisting of a "stub," to be retained by issuing express company, an "original," to be filed with the Commission, and a "duplicate," to be furnished to the agent to whom power of attorney is given, or the express company to which concurrence is given.

Notice of revocation of a concurrence will become effective ten days from the date upon which such notice is filed with the Commission and served upon the express company to which such concurrence was given.

In giving concurrences care must be taken to avoid probability of two or more agents or express companies naming conflicting rates or rules.

The granting of authority to issue tariffs under power of attorney, or concurrence, does not relieve the express company conferring the authority from the necessity of complying with the law with regard to posting tariffs. It may use tariffs issued under its authority for that purpose.

Joint Agency; Power of Attorney to Agent; Form EI1; Filing with Commission.

22. No classification, exceptions to classifications, publications, rulings, tariffs, or rates, promulgated by any classification committee, tariff committee, traffic committee or association, or compiler, will be received by the Commission from them, or filed as such. If any express carrier or carriers subject to the act adopt or desire to observe or apply any such issues or publications, the same must be filed by it, or them, and the first page thereof must so indicate by proper application, the same as any other tariff, bearing proper designations and numbers.

When, however, any such classification, exceptions to classification, publications, rulings, tariffs, schedules or rates, promulgated by any classification committee, tariff committee, traffic committee or association, shows upon its face that it is issued by such committee or association as the agent for any of the carriers named therein, then the same may be filed with the Commission by such committee or association, and will be considered as the act of the carriers named for whom the agent acts, provided the carrier so named shall file with the Commission copy of power of attorney appointing such agent, and that such classifications, exceptions to classifications, publications, rulings, tariffs or schedules shall bear consecutive I. R. C. numbers, commencing with 1, with prefix to be assigned by the Commission upon application in writing to it by such agent, and that the rates, rules and regulations in such agent's tariffs must be properly referred to in the proper tariffs of the carrier for whom such agent acts.

To avoid encumbering the files of the Commission, such agent will file with the Commission one copy of all such tariffs, amendments or supplements thereto, in accordance with the requirements of rules herein.

The following form, on paper 8 by 10½ inches in size, will be used in giving authority to an agent to file for the express company giving the authority tariffs and supplements thereto, numbered consecutively, commencing with 1. Such authority must not be given to an association or bureau, and it may not contain authority to delegate to another power thereby conferred.

To be Filed With the Railroad Commission of Indiana.

[Name of express company in full.]

(Date)

Form EI1.—No.

Know all men by these presents:

That the [name of express company] has made, constituted, and appointed, and by these presents does make, constitute, and appoint [name of person appointed] its true and lawful attorney and agent for the said company and in its name, place, and stead to file tariffs, classifications, and exception sheets and supplements thereto, as required of common carriers by the Act of March 9, 1907, and by regulations established by the Railroad Commission of Indiana thereunder for the period of time, the traffic, and the territory now herein named:

.....

And the said [name of express company] does hereby give and grant unto its said attorney and agent full power and authority to do and perform all and every act and thing above specified as fully to all intents and purposes as if the same were done and performed by the said company, hereby ratifying and confirming all that its said agent and attorney may lawfully do by virtue hereof, and assuming full responsibility for the acts and neglects of its said attorney and agent hereunder.

In witness whereof the said company has caused these presents to be signed in its name by its president and to be duly attested under its corporate seal by its secretary, at, in the State of, on this day of, in the year of our Lord nineteen hundred and

THE [name of express company],

By,

(Its proper officer.)

Attest:

.....,

Secretary.

[CORPORATE SEAL.]

Billing Orders, Rate Notices, Etc., Illegal.

23. Billing orders, telegraphic authority to local agents to make rates, or promises to protect rates not duly issued and published, will be held to be in violation of law, except as provided in paragraph 29 hereof and in execution of the permission granted by the Commission as provided in such paragraph.

Posting Tariffs.

24. Tariffs need only be filed in depots where they are effective; i. e., at the point of origin.

Certification of Tariff Files; Form of Certificate.

25. On January 1, 1909, all tariffs, schedules, classifications, etc., then on file in the Department of Tariffs of the Railroad Commission of Indiana must be certified to by each express company filing the same to the effect that the same have been filed in accordance with the requirements of Section 9, Chapter 241 of the Acts of Indiana, 1907, the following form, on paper 8 by 10½ inches in size, to be used therefor:

November 1, 1908.

I hereby certify that I am the.....of the.....express company, and as such have charge of the filing with the Railroad Commission of Indiana of all schedules, rules and regulations for the transportation of property by said company within the State of Indiana, as required by Section 9 of the Act approved March 9, 1907, and that all the provisions of said Act have been complied with, and that all such schedules, rules and regulations effective on such express company's line in said State are now on file with such Commission, the last filing thereof being designated as No. and I. R. C. No.

(Official Character.)

New Rates.

26. Any carrier or carriers subject hereto desiring to publish a rate on any article on a basis lower than the current classification and class rate, such lower rating may be made effective by publication in a proper tariff two days after the filing of such tariff with the Commission and such rate will be deemed to be a new rate.

New Rates.

27. Through rates, equal to or lower than the combination of local rates between any two points within the State may be established by publishing such through rate in a proper tariff, to become effective two days after filing with the Commission, and such through rate will be deemed a new rate.

Notation of "New Rate" on Tariffs.

28. All tariffs published and filed with the Commission establishing "new rates" pursuant to the authority granted by paragraphs 26 and 27 hereof, shall bear in a conspicuous place upon the title page of such tariff the notation "new rate" or "new rates," as the case may be.

Application to Reduce Rates; Form of Application.

29. Applications for permission to reduce effective rates in less than ten days must be made in writing;

Applications to publish new rates in less than two days must be made in writing;

Such applications to reduce existing or publish new rates may be made by wire;

(Example—Form EI9.—No.....)

New York, N. Y., 190..

To the Railroad Commission of Indiana, Indianapolis, Indiana:

Permit rate cents per on Indianapolis to Ft. Wayne, via.....(routing), effective this date (or state effective date), for days (or omit duration of rate, provided it exceeds 10 days).

.....Traffic Manager.

.....Express Company.

The Commission will grant or deny the application at once, and wire answer at carrier's expense. If permission is granted, tariff for such rate must be issued and filed within five days, showing such authority of the Commission, as provided in Rule 3 herein.

30. No tariff will be received or filed which is effective for a less period than ten days, or which applies for the benefit of any named person, firm or corporation.

By order of the Commission.

L. E. MORTON, Clerk,
Department of Tariffs,
Indianapolis, Indiana.

Concurrences in passenger and freight tariffs have been filed in this Department as required by the law, the rules of the Commission, and all committee and agency tariffs are being issued by duly constituted joint agents, and proper powers of attorney are now on file with the Commission appointing such joint agents.

The General Order of the Commission with reference to the Supervision of Tariffs is still in effect, and the same is made part hereof as follows:

RATE ADJUSTMENTS.

The following is a report of specific cases of adjustments of rates under informal applications, and which have been referred to this Department, as the same appear upon the Claim and Adjustment Docket of this Department. A brief résumé of each case follows:

No. T-654. Failure of C., C., C. & St. L. Ry. Co. to prorate with C., C. & L. R. R. Co.

This matter was originally reported in the first annual report of this department and shown therein as still pending. It involved an

informal application of J. A. Goddard, of Muncie, Indiana, to require the C., C., C. & St. L. Ry. Co. to prorate with the C., C. & L. R. R. Co., on traffic destined east and west of Losantville, Indiana, the junction of the two railroads mentioned. The matter was taken up with the carriers and on February 10, 1908, the C., C., C. & St. L. Ry. Co. notified the Commission that it had arranged to put on a through car from Muncie, Indiana, to points east of Shirley, on the P. & E. R. R., and the applicant in this case withdrew his complaint.

No. T-712. Reduction of Rate on Coal.

This matter was also pending when the first annual report of this department was submitted, and involved an informal application of the Co-Operative Construction Company, of Laporte, Indiana, for a reduction of the rate on coal from mines on the Vandalia Railroad to Westville, Indiana. An offer was made by the Vandalia and Wabash railroad companies to shrink the rate of \$1.25 per ton 5 cents. This was not satisfactory to the applicant and it was suggested to it that more favorable rates could be obtained from the Linton district lines on the Monon railway, and since that time no further communication has been received from the applicant and that matter has been closed upon the record.

No. T-731. Reduction Class Rate Knightstown to Westport.

This matter was also reported as pending in the first annual report of this department and involved an informal application by Adam H. Bartel & Company, of Richmond, Indiana, for reduction of the first class rate of 18 cents per hundred pounds on L. C. L. shipments from Knightstown to Westport being used in combination with rate of 8 cents per hundred pounds from Richmond to Knightstown on traffic from Richmond, Indiana, to Westport via P., C., C. & St. L. Ry. and C., C., C. & St. L. Ry. After a very thorough investigation it developed the fact that the shipments in question were routed via Anderson, Indiana, and the Big Four Railway, and moved on a through first class rate to Westport, and that there had been considerable delay in the transfer at Anderson. The P., C., C. & St. L. Ry. Co. advised the Commission that every effort would be made by it to facilitate the transfer at Anderson, and on January 10, 1908, Bartel & Company advised the Commission that they had found the service and the rate satisfactory, thus closing the matter.

No. T-786. Reduction Rate on Coal.

Filed December 14, 1907; informal application by Queen Coal & Mining Company, Lafayette, Indiana, for reduction rate on coal, C. L., from mines on Southern Indiana Railway to Crawfordsville, Indiana, via Terre Haute and Vandalia Railroad, alleging discrimination because of 65 cents competitive rate from Sullivan County field. Applicant was notified that rate desired by it had been in effect since September 25, 1907, and matter closed.

No. T-786.5. Reduction Rate on Coal.

Filed December 11, 1907; informal application by Hughes Brothers, of Bloomington, Indiana, for reduction of joint rate on coal, C. L.,

from Linton district mines on Monon Railway to Bloomington, Indiana, Indianapolis Southern Railroad delivery; applicant desired local rate of 50 cents to Bloomington over the Monon Railway and the establishment of a reasonable switching charge from the interchange to industries located on the Indianapolis Southern Railroad. This matter was later consolidated by a like application by the Bloomington Coal Company of that city. Under direction of the Commission an investigation was conducted by this department at Bloomington, into the car service, switching conditions, and practices of the Monon Railway Company at that point and the matter was then taken up with the Monon and the Indianapolis Southern Railroad companies, but no adjustment could be reached, the Monon Railway Company insisting upon protecting its mines by maintaining a 75-cent joint rate for Indianapolis Southern Railroad deliveries at Bloomington. This matter has since passed to the formal docket of the Commission and is closed upon this record.

No. T-787. Reduction of Rates on Grain.

Filed December 17, 1907; informal application by Carl Ford, Mongo, Indiana, for reduction of rate on grain, C. L., from Angola, Indiana, to LaGrange, Indiana, via the St. Joseph Railway Company. This matter was ordered dismissed by the Commission on the same date for the reason that the Commission has no jurisdiction over the freight rates of the St. Joseph Valley Railroad Company, as that company only operates a traction line.

No. T-798. Reduction of Rate on Live Stock.

Filed December 28, 1908; informal application by Roberts & Son, Jamestown, Indiana, for reduction of rates on live stock, C. L., from points on the P. & E. division of the Big Four railway, west of Indianapolis to Indianapolis, alleging said rates to be discriminative as compared with rates on the C., H. & D. Railway in the same territory. A careful investigation and comparison of these rates was made and reported to the Commission and the Commission directed the application be dismissed for the reason that the rates were not sufficiently out of line to justify any action by the Commission.

No. T-799. Transit Rule on Grain.

Filed December 28, 1907; informal application by Wilburt Hawkins, Fowler, Indiana, for the application of transit rules on grain passing through his elevator, at Fowler, alleging that competition was such that grain could only pass through his elevator under transit rules. This matter was taken up with the Big Four Railroad Company, but as yet no agreement was reached and the matter is still pending.

No. T-812. Reduction Rate on Coal.

Filed January 10, 1908; informal application, Oliver Steele, Carlisle, Indiana, for a reduction rate on coal of 40 cents per ton from Sullivan County mines via E. & T. H. R. R. to Vincennes, Indiana.

Investigation developed rate not sufficiently out of line nor unreasonable enough to justify any action and the Commission ordered said application dismissed.

No. T-845. Classification of and Minimum Rates on Short Logs.

Filed February 1, 1908; informal application by Globe Handle Company, Evansville, Indiana, for reduced rating on short logs and reduction of minimum rates for this commodity when loaded in 50,000-pound-capacity cars and over. The investigation showed that the movement of these logs was in the State; however, the matter was taken up with the Illinois Railroad Company and adjusted to the satisfaction of the Globe Handle Company. The matter was closed on June 6, 1908.

No. T-860. Reduction Rate on Coke.

Filed March 30, 1908; informal application of Martin-Howe Coal Company, Chicago, Illinois, for reduction rate on coke, from Laporte, Indiana, to Indianapolis, Indiana, via Lake Erie & Western Railroad. This matter was taken up with the Lake Erie & Western Railroad Company and a rate of \$1.15 cents per ton published. Matter was closed April 1, 1908.

No. T-873. Reduction Rates on Various Commodities.

Filed April 30, 1908; informal application of Calvin Kemper, Rockville, Indiana, for reduction and establishment of rates on gravel, cement, steel and wire rods, and concrete products, C. L., from Rockville, Indiana, to various points within the State. The applicant was notified that the information contained in his communication was insufficient for the Commission to act intelligently in the matter and a conference with him was suggested. No response has ever been received from the applicant and the matter has been closed upon this department's docket.

No. T-881. Reduction Rates on Milk and Cream.

Filed May 18, 1908; informal application by Schlosser Brothers, Plymouth, Indiana, for reduction in mileage scale of rates applying on milk and cream, in cans, from local stations on the L. E. & W. R. R. to Plymouth, Indiana. This matter was taken up by conference at once with the general passenger agent of the Lake Erie & Western Railroad Company and its scale of rates modified as to cream, which was accepted by the applicant as satisfactory and the matter was closed upon the docket May 18, 1908.

No. T-898. Reduction Rate on Lumber.

Filed June 3, 1908; informal application of Indiana Manufacturing Company, of Peru, Indiana, for reduction of rate on lumber, C. L., from Paoli, Indiana, to Peru, Indiana, via Monon Railway, Lafayette and the Wabash Railroad. This matter was investigated and taken up with the carriers in interest and the rate reduced to 12 cents per hundred pounds. Matter was closed June 6, 1908.

No. T-917. Reduction Rate on Logs.

Filed June 22, 1908; informal application by D. L. Adams, of Portland, Indiana, for reduction of rate on logs, C. L., from Orestes, Indiana, to Fowlerton, Indiana, via Lake Erie & Western Railroad and C., C. & L. R. R. Matter was investigated and taken up and compromised, a rate of 5 cents per hundred pounds being published, making a reduction of one and one-half cents per hundred pounds. The matter was closed June 30, 1908.

No. T-951. Reduction Rate on Grain.

Filed March 6, 1908; informal application by Kinsey Brothers, of North Manchester, Indiana, for reduction of rate on grain, C. L., from Servia, Indiana, to Auburn, Indiana, via Erie Railroad, Newton, and Vandalia Railroad. This matter was taken up by telegraph, because of its alleged urgency and a reduction of the rate to 5 cents per hundred pounds was effected. The Commission was later advised that no traffic ever moved on this rate. Matter was closed March 9, 1908.

No. T-955. Reduction Rate on Sewer Pipe.

Filed February 25, 1908; informal application by William E. Dee Company, of Chicago, Illinois, for reduction of rate on sewer pipe from Mecca, Indiana, to Indiana Harbor, Indiana, via C. & E. I. R. R., Pennsylvania Co., and I. H. B. R. R. Investigation showed the movement of this traffic to be inter-state; however, the matter was taken up with the carriers and the C. & E. I. R. R. Co. declined to join in any reduction of the rate. Applicant was notified that if it desired further steps taken a formal petition would have to be filed. No petition was filed and the matter was closed March 9, 1908.

No. T-957. Reduction Rate on Coal.

Filed March 19, 1908; informal application by Campbell, Smith, Ritchie Company, of Lebanon, Indiana for reduction of rate on coal from Brazil district mines on the Big Four Railway to Lebanon, Indiana, via the Big Four Railway. This matter was taken up with the Big Four Railway Company which declined to reduce the rate and the matter is still pending.

No. T-962. Reduction Rate on Coal.

Filed March 10, 1908; informal application by Fauvre Coal Company of Indianapolis, Indiana, for reduction of rate on coal, C. L., from Macksville, Indiana, to Aetna, Indiana, via Vandalia Railroad, Lakeville, and the Wabash Railroad. Alleged combination of locals of \$1.40 per ton excessive and prohibitive. This matter was investigated and taken up with the carriers and a rate of \$1.15 per ton was offered as a compromise but declined by the applicant. This matter was closed on this Department's docket June 1, 1908, and passed to the formal docket of the Commission.

No. T-972 A. Reduction Rates on Logs.

Filed July 1, 1908; informal application by J. M. Buck for reduction of rates on logs, C. L., from local stations on the P., C., C. &

St. L. Ry., to Bluffton, Indiana, via C., C. & L. Ry. Investigated and taken up with the carriers and the Commission's joint log scale checked in and published and matter closed August 1, 1908.

No. T-979. Reconsignment of Coal at Indianapolis, Indiana.

Filed June 8, 1908; informal application by Martin-Howe Coal Company, of Indianapolis, Indiana, for establishment of uniform practice and rate of charge for the reconsignment of bituminous coal from Indiana fields, at Indianapolis, Indiana, by all carriers reaching that point. This matter was handled in conference under direction of Commissioner Wood, and after several extended conferences between the carriers, the shippers and Commissioner Wood, all the lines agreed to institute uniform rate of charge of \$2.00 per car for the reconsignment of Indiana and Illinois coal at Indianapolis terminal; provided eastern coal was treated in the same manner. All but one of the lines published uniform rules and rate of charge on eastern coal, but owing to the refusal of this line, authority was thereafter requested by several of the lines to abrogate their rules, and such authority was granted by the Commission, as the Commission could not enforce its order without the filing of formal complaint, which was not done, and the matter was closed in this department October 28, 1908.

No. T-986. Manufacturers' Rate to South Bend.

The conferences in this matter were conducted by the Commission, in general, and this department furnished, under instruction of the Commission, comparative rate and traffic statistics, as the same appear in File of Cases Numbers 280 and 281, on secretary's record.

No. T-1000. Rate on Eastern Coal.

Filed July 16, 1908; informal application by Wales, Hunt Hardware Company, of Converse, Indiana, for rating on eastern coal, C. L., into Converse, Indiana, from eastern fields, via P., C., C. & St. L. Railway. This was entirely an interstate matter, and, under instruction of Commissioner Wood, the same was called to the attention of the applicant, with the suggestion that they take it up with the Interstate Commerce Commission, at Washington. Matter closed July 23, 1908.

No. T-1019. Reduction Rate on Stone, Crushed.

Filed August 4, 1908; informal application by R. J. Million, of Monticello, Indiana, for reduction of rate on stone, crushed, C. L., from Kenneth, Indiana, to Barnettsville, Indiana, via P., C., C. & St. L. Railway. The matter was taken up with the carrier and a reduction in the rate from 30 cents to 24 cents per ton, in accordance with the Commission's scale of rates on road and street materials, was published by the carrier September 1, 1908, and the matter closed at that time.

No. T-1020. Reduction Rate on Logs.

Filed August 4, 1908; informal application by Neher and Palmer, of Frankfort, Indiana, for reduction of rate on logs, C. L., from Stockwell, Indiana, to Frankfort, Indiana. Investigation showed only class

rate in effect between these points, and the matter was taken up with the C., C., C. & St. L. Ry. Co., but no adjustment has as yet been made, and the matter is still pending.

No. T-1027. Establishment of Rate on Coal.

Filed August 7, 1908; informal application by Loomington Coal Company, of Bloomington, Indiana, for establishment of joint rate on coal, C. L., from Summit Mine No. 2, Linton field, to Bloomington, Indiana, via Switz City and the Indianapolis Southern Railroad. This matter was taken up with the carriers in interest, and a rate of 60 cents per ton was made effective August 22, 1908, and the matter closed August 18, 1908.

No. T-1031. Reduction of Rate on Lumber.

Filed February 2, 1908; informal application by S. P. Coppock Lumber Company, of Orleans, Indiana, for reduction in rate on lumber, C. L., from Paoli, Indiana, to Bluffton, Indiana, via Monon Railway, Lafayette, Indiana, and the L. E. & W. R. R. This matter was taken up with the carriers, and the Monon Railway Company refused to join in a reduction of its rate, and the matter was closed August 27, 1908, the applicant being notified that if it desired to proceed further with the matter, it would be necessary to file a formal petition with the Commission.

No. T-1042. Reduction Rate on Logs.

Filed August 24, 1908; informal application by Central States Cooperage Company, of New Castle, Indiana, for reduction in rate on logs, C. L., from Trevelac, and other local points on the Indianapolis Southern Railroad, to New Castle, Indiana, via P., C., C. & St. L. Ry. The matter was taken up with carriers, and on November 14, 1908, an agreement was reached with the carriers to publish rates on the basis of the Commission's log scale, and the matter was closed at that time.

No. T-1045. Establishment of Switching Rates at Crawfordsville Junction.

Filed August 29, 1908; informal application by Crawfordsville Shale Brick Company, of Crawfordsville, Indiana, for reduction in rates on traffic to and from its plant near Crawfordsville, Indiana, and Crawfordsville Junction, via the Monon Railway, and the establishment of reasonable switching charges for the movement of such traffic. This matter was investigated by this Department, under the instruction of the Commission, at Crawfordsville, Indiana, and after extended conferences, under the direction of Chairman Hunt, with the traffic officials of the Monon Railway Company, it was found that no adjustment could be reached, and the matter went to formal petition, closing the same upon this Department's record.

No. T-1005. Additional Shipping Days for Oil, Indianapolis and Terre Haute.

(See Informal Cases.)

No. T-1062. Reduction Rate on Logs.

Filed September 8, 1908; informal application by J. M. Buck, of Bluffton, Indiana, for reduction of rates on logs, C. L., from local stations on C. C. & L. R. R. and L. E. & W. R. R. to Bluffton, Indiana; the matter was taken up with the carriers and the rates adjusted to the basis of the Commission's log scale, and the matter closed September 28, 1908.

No. T-1065. Reduction Rate on Logs.

Filed September 15, 1908; informal application by Central Veneer Company, of Indianapolis, Indiana, for reduction of joint rate on logs, C. L., from Clinton, Indiana, on the C. & E. I. Railroad, to Indianapolis, via Terre Haute and Vandalia and Big Four R. Rs. This matter was taken up with the carrier by telegraph and a reduction of two cents per 100 pounds was immediately made, and the matter closed September 28, 1908.

No. T-1062. Reduction Rate on Lumber.

Filed September 16, 1908; informal application by S. P. Coppock & Sons Lumber Company, of Fort Wayne, Indiana, for reduction of rate on lumber, from Paoli, Indiana, to stations on the B. & O. S.-W. R. R., in Indiana, via Monon Railway, Mitchell, Indiana, and the B. & O. S.-W. R. R. The matter was carefully investigated, taken up with the carriers, and in conference it was shown that the applicant really wanted a sorting, dressing and stop-off privileges at Paoli and Orleans, Indiana, on lumber from the south, and which privilege was accorded to the applicant's satisfaction, and the matter closed October 9, 1908.

No. T-1086. Reduction Rate on Crushed Stone.

Filed September 26, 1908; informal application by W. B. Hobbs, of Tipton, Indiana, for reduction of rate on crushed stone, C. L., from Kokomo, Indiana, to Hobbs Station, Indiana, via L. E. & W. R. R. Under direction of Commissioner Wood a conference was at once held with the traffic officials of the L. E. & W. Railroad Company and resulted in an agreement being reached to at once shrink the rate $2\frac{1}{2}$ cents per ton, as a compromise, which was satisfactory to the applicant, and the matter was closed September 26, 1908.

No. T-1089. Reduction of Rate on Cord Wood.

Filed October 7, 1908; informal application by Philip Klein, of Evansville, Indiana, for reduction of rate on cord wood, C. L., from Deckers, Indiana, to Evansville, Indiana, via E. & T. H. R. R. This matter was taken up with the E. & T. H. Railroad Company, and the same was promptly adjusted to a rate satisfactory to the applicant, and the matter closed October 14, 1908.

No. T-1093. Rate on Chairs (Furniture).

Filed October 8, 1908; informal application by Southern Indiana Manufacturing Company, of Birds' Eye, Indiana, for reduction in rate on chairs, C. L., from Birds' Eye, Indiana, to Memphis, Tennessee, via Southern Railway; it being charged that the Birds' Eye rate was 2 cents per 100 pounds higher than the rate from Tell City, Indiana,

to Memphis, same route, Birds' Eye being intermediate thereto. The matter was investigated, and the fact developed that the rate from Tell City, Indiana, had been theretofore misquoted by the Southern Railway Company's representative, and that the rate from Birds' Eye and Tell City, Indiana, to Memphis, Tennessee, via the Southern Railway, were the same, and the matter was closed November 27, 1908.

No. T-1106. Milling in Transit Privileges on Grain at Noblesville, Indiana.

Filed October 22, 1908; informal application by Finch Bros., of North Liberty, Indiana, for application of milling in transit privilege on grain, at Noblesville, Indiana, when from North Liberty, Indiana, to Indianapolis and the seaboard, via C., I. & S. R. R. and the L. E. & W. R. R. The matter was taken up with the carriers and is still pending.

No. T-1108. Reduction Rate on Logs.

Filed November 4, 1908; informal application by Evansville Manufacturers' Association, of Evansville, Indiana, for reduction in rate on logs, C. L., from Griffin, Indiana, to Evansville, Indiana, via Illinois Central Railroad and E. & T. H. Railroad. The matter has been taken up with the carriers, and is still pending.

No. T-1117. Reduction Rates on Gravel.

Filed November 6, 1908; informal application by Charles H. Hunt, of Lafayette, Indiana, for reduction of rate on gravel, C. L., for commercial use, to basis of Commission's scale on gravel for street and road purposes, from Lafayette, Indiana, to Francesville, Indiana, via Monon Railway. An investigation was made, and a conference held, under direction of Chairman Hunt, with the carrier's representatives at Chicago, and the Monon Railway Company refused to reduce the rate to Francesville. The applicant was notified and advised that if he wished to proceed further, it would be necessary to file formal petition, and the matter was closed in this Department on November 14, 1908.

No. T-1120. Establishment Joint Rate on Eastern Coal.

Filed November 13, 1908; informal application by C. Cunningham, of Terhune, Indiana, for establishment of through rate on coal from Jackson County, Ohio, mines, on the D., T. & I. Ry., to Terhune, Indiana, Monon Railway delivery. Under direction of Chairman Hunt, this matter was taken up with the Ohio Railroad Commission, and the matter is still pending.

No. T-1121. Rate on Live Stock (Horses and Mules).

Filed November 11, 1908; informal application by William Etzler, of Salem, Indiana, for reduction in rate on horses and mules, C. L., from Salem, Indiana, to Louisville, Kentucky, via Monon Railway. Investigation showed that these shipments were for the south, and the Monon Railway Company refused to reduce its rate to Louisville, Kentucky, and the applicant was notified that it was matter that was under the jurisdiction of the Interstate Commerce Commission, and the matter was then closed November 25, 1908.

No. T-1128. Reduction Rate on Cross Ties.

Filed November 19, 1908; informal application by Townsend and Freeman, of Indianapolis, Indiana, for reduction of rate on cross ties from Scottsburg and Henryville, Indiana, to Columbus, Indiana, via P., C., C. & St. L. Ry., to basis of sixth class rates. Investigation showed that under maxima clause of tariff these movements could be protected on sixth class basis, which was satisfactory to applicant, and the matter was closed November 25, 1908.

No. T-1129. Reduction Rate on Logs.

Filed November 19, 1908; informal application by Albert Starbuck, of Petersburg, Indiana, for reduction in rate on logs, C. L., from Griffin, Indiana, to Petersburg, Indiana, via Illinois Central Railroad and E. & I. Railroad, via Evansville, Indiana. This matter has been taken up with the carriers, and is still pending.

No. T-1136. Reduction Rate on Cinders.

Filed November 24, 1908; informal application by Grand Beach Park Company, of Chicago, Illinois, for reduction in rate on cinders, C. L., of 40 cents per ton, from Michigan City, Indiana, to Corymbo, Indiana, via Michigan Central Railroad. The matter has been taken up with the carrier, and is still pending.

No. T-1130. Trap and Ferry Car Switching, L. C. L. shipments.

Filed November 13, 1908; informal application by Hercules Buggy Company, of Evansville, Indiana, for information relative to action of Interstate Commerce Commission with regard to trap and ferry switching of L. C. L. shipments. Under direction of Chairman Hunt this matter was taken up with the Interstate Commerce Commission, and applicant furnished with copies of Commission's informal rulings condemning the granting of such service free, and matter closed November 30, 1908.

No. T-1140. Reduction Rate on Logs.

Filed November 30, 1908; informal application by J. M. Buck, of Bluffton, Indiana, for reduction of rates on logs, C. L., from Berne, Genoa and Monroe, Indiana, to Bluffton, Indiana, via G. R. & I. Ry. and T., St. L. & W. R. R. Investigation made and sixth class rates found in effect, which applicant alleges to be prohibitive. This matter has been taken up with the carriers and is still pending.

I respectfully call attention to the fact that in twenty-one of the above matters satisfactory adjustments were brought about; eight are still pending; in twelve no adjustment could be reached; three were ordered dismissed by the Commission, and in one insufficient facts were presented and applicant pressed the matter no further. As will be noted from the date of filing to the date of closing in these matters, every effort has been made to procure as speedy adjustments as possible, and it is gratifying to note that the carriers

have at all times exhibited a courteous willingness to meet with the Department and the shippers in an effort to adjust these matters amicably.

APPLICATIONS FOR APPROVAL OF REFUNDS.

The report which follows embraces applications to the Commission for the approval of refunds, for alleged overcharge in rates, with a very brief résumé of the case and the action of the Commission. Those applications which are shown as filed prior to December 1, 1907, were reported in the first annual report of this department as pending, and subsequent action therein falls within this report.

No. T-739. Coal, C. L., Muncie to Gaston, Indiana.

Filed November 2, 1907; application Goodrich Bros., Winchester, Indiana; refund on carload coal, Muncie to Gaston, Indiana, via C. & L. Railroad; rate 75 cents per ton. Investigation showed tariff rate charged. Application dismissed December 6, 1907.

No. T-740. Logs, C. L., Terhune to Frankfort, Indiana.

Filed November 4, 1907; application Neher & Palmer, Frankfort, Indiana, refund, carload logs Terhune, Indiana, to Frankfort, Indiana, via Monon Railway. Rate charged, 3½ cents. Investigation showed lawful tariff rate charged. Application dismissed December 4, 1907.

No. T-746. Scrap Iron, C. L., South Bend to Ft. Wayne; Ft. Wayne to South Bend, Indiana.

Filed November 7, 1907; application by Weil Bros., Fort Wayne, Indiana; refund on carload scrap iron, South Bend to Fort Wayne; rate charged, \$1.15 per gross ton, as against \$1.40 per gross ton Fort Wayne to South Bend. Investigation showed tariff rate charged. Application dismissed December 1, 1907.

No. T-749. Coal, C. L., Linton to Heltonville, Indiana.

Filed November 8, 1907; application by J. M. Butches, Heltonville, Indiana; refund on carload of coal, Linton, Indiana, to Heltonville, Indiana, via Southern Indiana Railway. Rate charged, 75 cents per ton. Applicant alleged violation of long and short haul clause in that rate Linton to Seymour was only 50 cents per ton, to which movement Heltonville was intermediate. Reported to Commission and Commission held Seymour rate should be protected and refund authorized. Closed December 1, 1907.

No. T-756. Lumber, C. L., Patricksburg to Indianapolis, Indiana.

Filed December 7, 1907; application of Walnut Lumber Company, Indianapolis, Indiana; refund on carload of lumber Patricksburg to Indianapolis, Indiana, via Monon Railway; rate charged, 9 cents per 100 pounds. Investigation showed tariff rate charged. Application dismissed January 8, 1908.

No. T-758. Scrap Iron, C. L., Huntingburg to Indianapolis, Indiana.

Filed November 12, 1907; application of L. Hyman & Co., Indianapolis, Indiana; refund on carload of scrap iron, Huntingburg, Indiana, to Indianapolis, Indiana, via Southern Railway and Pennsylvania Lines; rate charged, \$1.80 per net ton. Investigation showed that Huntingburg should have been protected as intermediate to the \$1.20 per gross ton rate Evansville to Indianapolis, Ind., via Terre Haute, and Commission authorized refund December 14, 1907.

No. T-761. Logs, C. L., Boyle, Mississippi, to Indianapolis, Indiana.

Filed November 6, 1907; application of Adams & Raymond, Indianapolis, Indiana; for refund on carload of logs from Boyle, Mississippi, to Indianapolis, Indiana; rate charged, 20 cents, being 4 cents in excess of Cincinnati, Ohio, rate. Applicant notified that matter should be referred to Interstate Commerce Commission. Closed December 1, 1907.

No. T-763. Brick, C. L., Laketon to Anderson, Indiana.

Filed November 15, 1907; application Anderson Foundry & Machine Works, Anderson, Indiana, for refund on 6 carloads brick from Laketon, Indiana, to Anderson, Indiana, via Erie, Vandalia and Central Indiana railroads; rate charged, \$2.20 per ton. Investigation showed that shipments moved between July 26 and August 3, 1907; that there was in effect until August 1, 1907, a rate of 80 cents per ton on brick via Erie and Big Four railways, which routing should have been used by initial agent in the absence of shipper's instructions. Commission authorized refund to 80 cents per net ton on actual weight of shipments, moving July 26 and 27, 1907, and to basis of 8 cents per 100 pounds, actual weight of shipments, moving August 1 and 3, 1907. Closed November 20, 1907.

No. T-767. Grain, C. L., Milroy, Indiana, to Cincinnati, Ohio; Reconsigned to Lawrenceburg, Indiana.

Filed November 20, 1907; application of Brown & Riley, Milroy, Indiana, for refund on car of grain, Milroy to Cincinnati, Ohio, reconsigned to Lawrenceburg, Indiana, via Big Four Ry.; rate charged, 7 cents per 100 pounds. Investigation showed tariff rate charged. Application dismissed January 1, 1908.

No. T-768. Scrap Iron, C. L., Van Buren to Elwood, Indiana.

Filed November 22, 1907; application of M. J. Forman, Elwood, Indiana, refund on carload of scrap iron, Van Buren, Indiana, to Elwood, Indiana, via T., St. L. & W. R. R. and P., C., C. & St. L. Railway. Investigation showed tariff rate charged. Application dismissed January 1, 1908.

No. T-769. Cinders, C. L., Kokomo to Circleville, Indiana.

Filed November 22, 1907; application by L. E. & W. Ry. Company, for refund on carload of cinders, Kokomo, Indiana, to Circleville, Indiana; rate charged, 6th class, 5 cents per 100 pounds. Investigation showed combination of locals of 35 and 45 cents per ton, to which basis Commission authorized refund. Case closed December 9, 1907.

No. T-772. Commodity Rates, Kersey to Dinwiddie, Indiana.

Filed November 21, 1907; application by Jerome Dinwiddie, of Hammond, Indiana, for refund on shipments of coal, gravel and metal roofing, from Kersey, Indiana, to Dinwiddie, Indiana, via Chicago & Wabash Valley Railway. Investigation showed overcharge of 10 cents per ton on coal; tariff rate of 50 cents per ton charged on gravel. Commission authorized refund of 10 cents per ton on coal shipments. Applicant alleged charge of 14 cents per 100 pounds on metal roofing. Investigation showed same not to be in accordance with tariff rate, and applicant was requested to furnish necessary billing reference and information with reference thereto. No further reply was received from applicant, and the case was closed January 8, 1908.

No. T-773. Coal (Eastern), Marion to Winchester, Indiana.

Filed November 26, 1907; application by Maynard Coal Company, of Columbus, Ohio, for approval refund on carload of coal (eastern) from Marion, Indiana, to Winchester, Indiana, via Big Four Railway; rate charged, 8 cents per cwt. Investigation showed rate of 80 cents per ton applicable, and refund authorized by Commission of \$32.12, and matter closed March 16, 1908.

No. T-774. Logs, C. L., Stearleys and Asherville to Limesdale.

Filed November 26, 1907; application by Vandalia Railroad Company for approval refund on 11 carloads of logs from Asherville and Stearleys, Indiana, to Limesdale, Indiana, via Vandalia Railroad, rates charged, 6 and 7 cents per cwt. Investigation showed tariff rates charged and application dismissed by Commission December 5, 1907.

No. T-781. Logs, C. L., Walton to Marion, Indiana.

Filed December 9, 1907; application by P., C., C. & St. L. Ry. Company for approval of refund two carloads of logs, from Walton, Indiana, to Marion, Indiana, rate charged, $4\frac{1}{2}$ cents per cwt., via P., C., C. & St. L. Railway. Investigation showed that carrier in complying with Commission's order in the log rate case Number 132, through clerical error, omitted to reduce the Walton-Marion rate to 4 cents per cwt., and Commission authorized refund of \$7.83 December 30, 1907.

No. T-784. Logs, C. L., Kitchell to New Castle, Indiana.

Filed December 10, 1907; application by Chicago, Cincinnati & Louisville Railroad Company for approval of refund on two carloads of logs from Kitchell, Indiana, to New Castle, Indiana, via C., C. & L. R. R. and C., C., C. & St. L. Ry.; rate charged, 8 cents per cwt. Investigation showed different routing carrying $5\frac{1}{2}$ cents per cwt. rate, and refund authorized of \$18.19, and matter closed December 10, 1907.

No. T-787 $\frac{1}{2}$. Piano, L. C. L., Indianapolis to Mulberry.

Filed December 14, 1907; application by Jno. M. Seifert, of Mulberry, Indiana, for approval of refund on shipment of one piano from Indianapolis to Mulberry, Indiana, via Terre Haute, Indianapolis and

Eastern Traction Company, freight charges \$3.00. Applicant advised that Commission has no jurisdiction over freight rates of traction companies, and application dismissed by Commission December 14, 1907.

No. T-792. Scrap Iron, C. L., Farnsworth to Shelburn, Indiana.

Filed December 24, 1907; application by Indiana Southern Coal Company for approval of refund on car of scrap iron from Farnsworth, Indiana, to Shelburn, Indiana, via Evansville and Terre Haute Railroad, rate charged, \$1.60 per net ton. Investigation showed tariff rate charged, and application dismissed by Commission on January 3, 1908.

No. T-793. Grain, C. L., Thorntown to Indianapolis, Indiana.

Filed December 21, 1907; application by H. E. Kinney, of Indianapolis, Indiana, for approval refund on carload of grain, Thorntown, Indiana, to Indianapolis, Indiana, via C., C., C. & St. L. Ry., account alleged overweight, rate charged on minimum weight of 48,000 pounds. Investigation showed minimum weight to be in accordance with tariffs of carrier, and application dismissed by Commission January 3, 1908.

No. T-796. Hay, C. L., Movement via C. & E. I. Railroad.

Filed December 28, 1907: application by Charles A. Lyons, of Perryssville, Indiana, for approval of refund on carload of hay and straw, between points on C. & E. I. Railroad, rate charged, 7 cents per cwt. Facts alleged were not sufficient to warrant action by Commission and applicant did not press claim.

No. T-804. Express, Indianapolis to Hymera, Indiana.

Filed December 23, 1907; application by State Geologist for approval of refund on one express package, from Indianapolis to Hymera, Indiana, via Adams and Southern Indiana Express companies, weight three pounds, charges 48 cents, and investigation showed tariff rates charged. Application dismissed by Commission on January 8, 1908.

No. T-806. Cinders, C. L., Kokomo to Hemlock, Indiana.

Filed December 23, 1907; application by E. N. Wallace, of Hemlock, Indiana, for approval refund on carload of cinders from Kokomo to Hemlock, Indiana, via P., C., C. & St. L. Railway, rate charged, 3 cents per cwt. Investigation showed shipment moved on January 1, 1907, which was prior to the taking effect of Commission law, and the parties were at liberty to make any adjustment of the matter that might be satisfactory to themselves.

No. T-807. Scrap Rails, C. L., Veedersburg to McClellan's Switch, Indiana.

Filed January 7, 1908; application by A. L. Greenberg Iron Company, of Terre Haute, Indiana, for approval of refund on carload of scrap rails, from Veedersburg to McClellan's Switch, Indiana, near Coal Bluff, Indiana, via C. & E. I. Railroad, rate charged, sixth class, 5 cents per cwt., and protection of 55 cent rate sought; applicant had previously made requirement on carrier for 75-cent rate per gross ton

for this particular movement, which carrier had published, but, through error, published rate to Coal Bluff, instead of McClellan's Switch, about a mile and a half beyond Coal Bluff, and carrier then refused to protect 75-cent rate, and, after thorough investigation, Commission authorized refund to basis of 75 cents per gross ton and matter closed June 16, 1908.

No. T-809. Coal (Eastern), C. L., Sheff to Dunn, Indiana.

Filed January 3, 1908; application by Chicago, Indiana and Southern Railroad Company for approval of refund on car of eastern coal moving from Sheff, Indiana, to Dunn, Indiana, via C., I. & S. Railroad, rate charged, \$1.00 per ton, distance $9\frac{1}{2}$ miles. Investigation showed no rate in effect, and agent arbitrarily assessed rate of 5 cents per 100 pounds, and Commission referred same to Legal Department of New York Central Lines, with recommendation that movement of this car of coal should be adjusted on through rates. Matter closed February 19, 1908.

No. T-811. Stone (Crushed), C. L., Garrett to Auburn, Indiana.

Filed January 10, 1908; application by Baltimore & Ohio Railroad Company, for approval of refund on five cars crushed stone, Garrett, Indiana, to Auburn, Indiana, via B. & O. Railroad, rate charged, $6\frac{1}{2}$ cents per 100 pounds, being sixth class rating on shipment. Investigation showed traffic originated in Ohio, and Commission recommended that carriers arrange to protect lower rates on shipment by applying reconsignment rule to a possible through rate. Matter closed April 22, 1908.

No. T-819. Coal, C. L., Deerfield, Ohio, to Fort Wayne, Indiana.

Filed February 18, 1908; application by The James Mullins Coal Company, of Cleveland, Ohio, for approval of refund of charge of 30 cents per ton for team track delivery on Lake Shore & Michigan Southern Railway, at Fort Wayne, of car of coal, routed for P., F. W. & C. Railway delivery through shippers' error, for which there was no published rate. The Commission dismissed the application as having no jurisdiction, but recommended a switching charge of \$2.50, and matter closed March 28, 1908.

No. T-843. Transit Claims on Grain via E. & T. H. Railroad.

Filed January 18, 1908; application by Iglehart Brothers, of Evansville, Indiana, for approval of refund of \$711.10, on shipments of grain via E. & T. H. Railroad, and investigation showed tariff rates charged, and application dismissed by Commission.

No. T-844. Contractors' Outfit, Plainfield to Cumberland.

Filed January 16, 1908; application by Wolf & Ewing, contractors, of Indianapolis, Indiana, for approval of refund on contractors' outfit, from Plainfield, Indiana, to Cumberland, Indiana, via P., C., C. & St. L. Railway; rate charged, $10\frac{1}{2}$ cents per cwt. Investigation showed tariff rate charged, and application dismissed by the Commission February 15, 1908.

No. T-856. Switching Charges at Indianapolis, Indiana.

Filed March 26, 1908; application Piel Brothers Starch Company of Indianapolis, Indiana, for approval of refund of switching charges on traffic, in carloads, moving into Indianapolis via Monon Railway, it being shown in the investigation that no switching tariff had been legally filed with the Commission by the carrier covering the absorption of switching charges at Indianapolis until March 8, 1908, and the traffic having moved prior to that time, and eighteen of the cars in controversy moving subsequent to June 1, 1907, the effective date of the Commission law. The Commission held that the Monon Railway under its absorption rules was not bound to absorb the switching charges on non-competitive traffic, provided it had always treated and charged its patrons all alike with reference thereto. Application dismissed and matter closed May 29, 1908.

No. T-857. Stone (Crushed), C. L., Montpelier to Dunkirk.

Filed March 16, 1908; application by Baltes Stone Company, of Fort Wayne, Indiana, for approval of refund on carload of crushed stone, from Montpelier to Dunkirk, Indiana, via L. E. & W. Railroad Company, rate charged, \$1.20 per net ton, overcharge of \$27.34. Investigation showed local commodity rate on crushed stone, in carloads, from Montpelier to Hartford City, Indiana, which was one portion of haul, of 30 cents per net ton, making combination rate of 90 cents per ton, and Commission authorized refund to that basis, and matter closed March 27, 1908.

No. T-858. Plows, C. L., South Bend to Corydon, Indiana.

Filed March 25, 1908; application by Oliver Chilled Plow Works, of South Bend, Indiana, for approval refund on carload of plows from South Bend, Indiana, to Corydon, Indiana, via C., I. & S. R. R., C., I. & L. Ry. and So. Ry., rate charged, 20 cents per cwt. Investigation showed tariff rate charged, and application dismissed by Commission March 27, 1908.

No. T-864. Flue Lining, C. L., Mecca, Indiana, to Gary.

Filed April 6, 1908; application by W. E. Dee Company, of Chicago, Illinois, for approval of refund on carload shipments of flue lining, from Mecca, Indiana, to Gary, Indiana, via C. & E. I. R. R. and Wabash R. R.; rate charged, 9 cents per cwt., as against 90 cents per ton to Chicago. Investigation showed movement of traffic to be interstate, and application was dismissed by the Commission.

No. T-865. Corn, C. L., Oaktown, Indiana, to Vincennes, Indiana.

Filed April 4, 1908; application by J. & S. Emison & Company, of Vincennes, Indiana, for approval of refund on carload of corn, from Oaktown, Indiana, to Vincennes, Indiana, via E. & T. H. R. R.; rate charged, 5½ cents per cwt., and carrier refused to apply milling in transit rule, reducing rate to three cents per cwt. Investigation, and refund to 3 cents per cwt authorized by Commission April 7, 1908.

No. T-865. Coal, C. L., Southern Indiana Mines to Lafayette, Indiana.

Filed March 18, 1908; application by the Queen Coal and Mining Company, of Lafayette, Indiana, for approval of refund on carload shipments of coal from mines on the Southern Indiana Railway to Lafayette, Indiana, via Southern Indiana Railway and the Big Four Railway; rate charged, 98 cents per ton. Investigation showed that rate of 98 cents per ton applied via Indianapolis, and the movement via Terre Haute, Vandalia Railroad, Frankfort and L. E. & W. Railroad, was covered by a 90-cent rate; shipments actually moved via Indianapolis, but shippers' instructions were for routing via Frankfort, Indiana, and on the 90-cent rate. Commission authorized a refund to the basis of the 90-cent per ton rate, and the matter was closed April 7, 1908.

No. T-870. Poles, C. L., Morgantown to Trafalgar, Indiana.

Filed March 10, 1908; application by Old Hickory Chair Company, of Martinsville, Indiana, for approval of refund on carload of hickory poles, Morgantown to Trafalgar, Indiana, via C., C., C. & St. L. Railway; rate charged, 6 cents per 100 pounds. Investigation showed tariff rate charged, and application dismissed by Commission May 1, 1908.

No. T-880. Coal, C. L., Fair Oaks to Rensselaer, Indiana.

Filed May 16, 1908; application by Hunter W. Finch & Company, of Chicago, Illinois, for approval of refund on carload of coal from Fair Oaks, Indiana, to Rensselaer, Indiana, via Monon Railway Company; rate charged 65 cents per ton, under distance tariff. Investigation showed tariff rate charged, and application dismissed by the Commission May 20, 1908.

No. T-887. Wagons, C. L., South Bend to Corydon, Indiana.

Filed February 28, 1908; application by Studebaker Bros. Company, of South Bend, Indiana, for approval of refund on carload of wagons from South Bend to Corydon, Indiana, via C., I. & S. R. R.; C., I. & L. Ry., and Southern Ry.; rate charged, combination of locals. Investigation showed tariff rates charged, and application dismissed by the Commission February 29, 1908.

No. T-909. Express, Indianapolis to Petersburg, Indiana.

Filed June 6, 1908; application by Boonshot Hardware Company, of Petersburg, Indiana, for approval of refund on express package, containing one plowshare, weighing $9\frac{1}{2}$ pounds, from Indianapolis to Petersburg, Indiana, via United States Express; charges, 80 cents. Investigation showed tariff rates charged, and application dismissed by Commission June 30, 1908.

No. T-950. Hay, C. L., Reconsignment at Terre Haute, Indiana.

Filed March 4, 1908; application by Indiana Hay Company, of Terre Haute, Indiana, for approval of refund on car of hay, from point in Arkansas to Terre Haute, reconsigned to Merchants' Distillery Company, Terre Haute, before placement to original consignee; charge

assessed by Vandalia Railroad Company of \$2.00. Investigation developed question of whether or not the change in name of consignee amounted to a reconsignment, and, as shipment was interstate, Commission recommended to Indiana Hay Company its removal to the Interstate Commerce Commission, which was done, and the matter closed June 17, 1908.

No. T-952. Trackage Charges at Indianapolis, Indiana.

Filed February 28, 1908; application by Mainland Manufacturing Company, of Indianapolis, Indiana, for approval of refund of charge of \$2.00 per car, for trackage, by C., H. & D. Railway Company, on transfers to L. E. & W. R. R. yards at Indianapolis, Indiana. Investigation showed charge to be in accordance with published rules of the carrier, and the application was dismissed by the Commission March 16, 1908.

No. T-963. Stone (Crushed), C. L., Cynthiana to Owensville.

Filed June 24, 1908; application by Evansville & Terre Haute Railroad Company, for approval of refund on carload of crushed stone from Cynthiana, Indiana, to Owensville, Indiana, via E. & T. H. R. R.; rate charged, sixth class, 4 cents per one hundred pounds. Investigation showed tariff rate charged, and application dismissed by Commission on June 25, 1908.

No. T-964A. Lumber, C. L., West Baden to New Castle, Indiana.

Filed June 23, 1908; application by Central States Cooperage Company, of New Castle, Indiana, for approval of refund on carload of lumber from West Baden, Indiana, to New Castle, Indiana, via Monon Railway and P., C., C. & St. L. Railway; rate charged, 12 cents per cwt. Investigation showed that tariff rate was charged, and application dismissed by the Commission June 25, 1908.

No. T-969. Cross Ties, C. L., Kurtz to Fairland, Indiana.

Filed June 25, 1908; application by Townsend & Freeman Company, of Indianapolis, Indiana, for approval of refund on two carloads of cross ties from Kurtz, Indiana, to Fairland, Indiana, via Southern Indiana Railway and Big Four Railway; rate charged, 14 cents per 100 pounds, being combination of local rates; the Southern Indiana Railway Company have removed cross ties from the classification by exception thereto published before the law took effect. Investigation showed through sixth class rate in effect, and Commission authorized refund of \$173.88, and matter closed June 25, 1908.

No. T-972. Potatoes, C. L. (Bulk), Carmel to Columbus.

Filed June 24, 1908; application by George I. Winans, of Columbus, Indiana, for approval of refund on carload of potatoes, in bulk, from Carmel, Indiana, to Columbus, Indiana, via Monon Ry. and P., C., C. & St. L. Ry.; rate charged, 10 cents per cwt., minimum 30,000 pounds. Investigation showed tariff rate charged, and application dismissed by Commission July 3, 1908.

No. T-973. Wood Slabs, C. L., Denver to Peru, Indiana.

Filed July 1, 1908; application by Parkhurst Manufacturing Company, of Peru, Indiana, for approval of refund on carload of slab wood from Denver, Indiana, to Peru, Indiana, via Vandalia Railroad and C., C. & L. Railroad; rate charged, 5 cents per cwt. Investigation showed rate of $3\frac{1}{2}$ cents per 100 pounds in effect, and Commission authorized refund to that basis, and matter was closed July 3, 1908.

No. T-975. Hoop Timber, C. L., Lynn to New Castle, Indiana.

Filed June 27, 1908; application by Central States Cooperage Company, of New Castle, Indiana, for approval of refund on carload of hoop timber from Lynn, Indiana, to New Castle, Indiana, via C., C. & St. L. Railway; rate charged, $6\frac{1}{2}$ cents per 100 pounds. Investigation showed tariff rate charged, and application ordered dismissed by the Commission July 3, 1908.

No. T-975A. Hay, C. L., Between Kersey and Hamlet, Indiana.

Filed May 28, 1908; application by the Star Elevator Company, of Indianapolis, Indiana, for approval of refund on several carload shipments of hay, two of which moved between Kersey and Hamlet, Indiana. Investigation showed tariff rate charged between Kersey and Hamlet, and applicant was notified to present interstate shipments to Interstate Commerce Commission, and matter closed July 3, 1908.

No. T-981. Brick, C. L., Brazil to Michigan City, Indiana.

Filed July 8, 1908; application by the Alphons Custodis Chimney Construction Company, of New York, N. Y., for approval of refund on shipments of brick, C. L., from Brazil, Indiana, to Michigan City, Indiana, via Vandalia Railroad and L. E. & W. Railroad; rate charged, \$1.10 per ton, the traffic having moved prior to June 9, 1907, the time of taking effect of the Commission law. The Commission notified the carriers that they were at liberty to make any adjustment of the matter which might be legal and satisfactory to the shippers. Matter was closed by order of Commission August 17, 1908.

No. T-993. Logs, C. L., Farabee to Indianapolis, Indiana.

Filed July 13, 1908; application by Indianapolis Freight Bureau, of Indianapolis, Indiana, for approval of refund on carload of logs from Farabee, Indiana, to Indianapolis, Indiana, via C., I. & L. Railway, Gosport and Vandalia Railroad; rate charged $9\frac{1}{2}$ cents per cwt., being combination of local rates. Investigation showed tariff rates charged, and application dismissed by order of Commission August 1, 1908.

No. T-996. Logs, C. L., Augusta to Lebanon, Indiana.

Filed July 21, 1908; application by Lebanon Lumber and Coal Company, of Lebanon, Indiana, for approval of refund on carloads of logs from Augusta, Indiana, to Lebanon, Indiana, via Big Four Railway Company; rate charged, 5 cents per 100 pounds. Commission authorized refund to basis of its log scale, and matter was closed July 25, 1908.

No. T-1007. Dry Goods, L. C. L., Philadelphia, Pa., to Laporte.

Filed July 27, 1908; application by Indiana Manufacturers' and Shippers' Association, of Indianapolis, Indiana, for approval of refund on 15 cases of cotton piece goods, L. C. L., from Philadelphia, Pennsylvania, to Laporte, Indiana, consigned to Laporte Woolen Mills Company; alleged overcharge of \$20.00, due to alleged improper inspection at Philadelphia, rating being raised to that of wools. Association was notified that the shipment was interstate and Commission was without jurisdiction, but an effort would be made to procure amicable adjustment by conference, and matter is still pending.

No. T-1010. Live Stock (Horse), Edinburg to Greensburg.

Filed July 26, 1908; application by E. Mendenhall, of Greensburg, Indiana, for approval of refund on shipment of one horse, Edinburg to Greensburg, Indiana, via P., C., C. & St. L. Railway; rate charged, 24½ cents, on weight of 5,100 pounds. Investigation showed tariff rate charged, and application dismissed by Commission July 31, 1908.

No. T-1014. Express, Indianapolis to Needham and Franklin.

Filed July 31, 1908; application by C. McLean, of Needham, Indiana, for approval of refund on shipments of ice cream from Indianapolis, Indiana, to Needham, Indiana, via American Express Company; rate charged, 50 cents per 100 pounds. Investigation showed tariff rate charged, and application dismissed by Commission August 10, 1908.

No. T-1015. Melons, C. L., Silverwood to South Bend, Indiana.

Filed July 28, 1908; application by L. G. Goddard, Tangier, Indiana, for approval of refund on carload of melons, shipped from Silverwood, Indiana, to South Bend, Indiana, via Clover Leaf Railroad and connections, with freight charges of \$30.00. Applicant was requested to furnish further statement of facts, and matter is still pending.

No. T-1017. Brick, C. L., Crawfordsville to Monticello.

Filed July 28, 1908; application by Monon Railway Company for approval of refund on shipments of brick, C. L., from Crawfordsville, Indiana, to Monticello, Indiana, via its line; rate charged, 80 cents per ton, to basis of 65 cents per ton. Investigation showed tariff rate charged, and application ordered dismissed by the Commission August 1, 1908.

No. T-1027. Coal, C. L., Summit Mine No. 2 to Bloomington.

Filed August 29, 1908; application by Bloomington Coal Company, of Bloomington, Indiana, for approval of refund on carload of coal from Summit Mine No. 2, Linton field, to Bloomington, Indiana, via Vandalia Railroad, Gosport and C., I. & L. Railway. Investigation showed rate in effect of 60 cents via Indianapolis Southern Railroad, routing ordered by shipper, and Commission authorized refund, October 9, 1908.

No. T-1036. Logs, C. L., Augusta to New Castle, Indiana.

Filed August 15, 1908; application by Central States Cooperaage Company, of New Castle, Indiana, for approval of refund on six carloads of logs from Augusta, Indiana, to New Castle, Indiana, via C., C. & St. L. Railway; rate charged, 6 cents per 100 pounds. Investigation showed that carrier had failed to publish Commission scale rate of $4\frac{1}{2}$ cents per cwt. on this traffic, and Commission authorized refund to that basis, closing matter on September 16, 1908.

No. T-1038. Sand, C. L., New Albany to Bedford, Indiana.

Filed August 27, 1908; application by Baltimore & Ohio Southwestern Railroad Company for approval of refund on carload of sand from New Albany, Indiana, to Bedford, Indiana, via B. & O. S. W. Railroad and Southern Indiana Railway; rate charged, 8 cents per cwt. Investigation showed tariff rate charged, and application dismissed by Commission August 27, 1908.

No. T-1043. Scrap rails, C. L., Seeleyville to Terre Haute.

Filed August 29, 1908; application by Cal Hirsch & Sons Iron and Rail Company, of St. Louis, Missouri, for approval of refund on four carloads of old rails from Seeleyville, Indiana, to Terre Haute, Indiana, via Vandalia Railroad; rate charged, 60 cents per ton. Investigation showed tariff rate charged, and application dismissed by Commission September 5, 1908.

No. T-1044. Brick, C. L., Melcher to Bloomington, Indiana.

Filed August 29, 1908; application by Cincinnati, Hamilton & Dayton Railway Company for approval of refund on two carloads of brick from Melcher, Indiana, to Bloomington, Indiana, via its line; rate charged, $21\frac{1}{2}$ cents per 100 pounds, July 11, 1908. Investigation showed tariff rate charged, and application dismissed by Commission September 1, 1908.

No. T-1046. Fence Posts, C. L., Cedar Lake to Wanatah.

Filed August 28, 1908; application by Edward Borger, of Valparaiso, Indiana, for approval of refund on carload of fence posts from Cedar Lake, Indiana, to Wanatah, Indiana, via Monon Railway; rate charged, 10 cents per 100 pounds, having been corrected from 14 cents. Investigation showed 10 cents per cwt. to be tariff rate, and application dismissed by Commission August 29, 1908.

No. T-1047. H. H. Goods, C. L., Brazil to Swayzee, Indiana.

Filed August 24, 1908; application by D. L. Spears, of Swayzee, Indiana, for approval refund on two cars of household goods, Brazil, Indiana, to Swayzee, Indiana, via Vandalia Railroad and Central Indiana Railroad, alleged overcharge because of improper loading in two cars with 12,000 pounds minimum applying on each car. Investigation showed charges in accordance with tariffs, and application dismissed by Commission August 29, 1908.

No. T-1048. Lumber, C. L., Salem to Bedford, Indiana.

Filed August 26, 1908; application by C. M. Crim & Son, Salem, Indiana, for approval of refund on carload of lumber from Salem to Bedford, Indiana, via C., I. & L. Railway, minimum weight charged on by carrier; marked capacity of car, 60,000; actual weight of shipment, 44,400 pounds of dry lumber. Investigation showed charges to be in accordance with tariffs, and application dismissed by order of the Commission August 29, 1908.

No. T-1049. Lumber, C. L., Sunman to Batesville, Indiana.

Filed August 28, 1908; application by Greemann Brothers Manufacturing Company, of Batesville, Indiana, for approval of refund on two cars of lumber from Sunman to Batesville, C., C., C. & St. L. Railway; rate charged, $5\frac{1}{2}$ cents per cwt. Investigation showed tariff rates charged, and application dismissed by Commission September 5, 1908.

No. T-1059. Lumber, C. L., Trackage Charges at Bedford, Indiana.

Filed September 3, 1908; application by the Lanz-Fry Lumber Company, of Bedford, Indiana, for approval of refund on eight cars of lumber switched by Monon Railway Company to applicant's lumber yard at Bedford, and for which a trackage charge of \$2.00 per car. Investigation showed charge to be in accordance with published tariffs, and application was ordered dismissed by the Commission September 5, 1908.

No. T-1060. Coal, C. L., Bushrod to Pendleton, Indiana.

Filed September 11, 1908; application by Taylor & Brown, of Pendleton, Indiana, for approval of refund on coal, C. L., from Bushrod mine to Pendleton, Indiana, via Vandalia Railroad and C., C., C. & St. L. Railway, to steam rate basis; rate charged, 85 cents per ton. Investigation showed no steam basis in effect to elevators, and application dismissed by Commission November 18, 1908.

No. T-1071. Logs, C. L., Decatur to Fort Wayne, Indiana.

Filed September 12, 1908; application by G. R. & I. Railway Company for approval of refund on 3 cars of logs from Decatur, Indiana, to Fort Wayne, Indiana, via G. R. & I. Railway, to basis of Monroe-Fort Wayne rate, to which movement Decatur is intermediate. Investigation made and Commission authorized protection of the Monroe-Fort Wayne rate of $3\frac{1}{2}$ cents per cwt. Matter closed September 17, 1908.

No. T-1072. Lumber, C. L., Waterville, Ohio, to Bellefontaine, Ohio.

Filed September 19, 1908; application by National Concrete Company, of Indianapolis, Indiana, for approval of refund on car of lumber from Waterville, Ohio, to Bellefontaine, Ohio, and finally to Indianapolis, Indiana, on combination rate. This matter was taken up with the Railroad Commission of Indiana and adjustment procured satisfactory to the applicant, and matter was closed September 26, 1908.

No. T-1073. Logs, C. L., Coburg to South Bend, Indiana.

Filed September 14, 1908; application by Sanders & Egbert Company, of Goshen, Indiana, for approval of refund on 4 cars of logs, Coburg, Indiana, to South Bend, Indiana, via B. & O. R. R. and Grand Trunk Railway; rate charged, 8 cents per 100 pounds. Investigation, and Commission authorized refund to basis of Commission log scale of 3.85 cents per one hundred pounds, and matter closed September 17, 1908.

No. T-1074. Scrap Iron, C. L., Evansville to Vincennes.

Filed September 9, 1908; application by Evansville & Terre Haute Railroad Company for approval of refund on car of scrap iron, Evansville to Vincennes, Indiana, via E. & T. H. Railroad; rate charged in accordance with tariff, but shipper claimed inability to load capacity of car, and Commission authorized refund of \$4.75, closing matter September 17, 1908.

No. T-1085. Fertilizer, C. L., Fort Wayne to Southern Railway Points.

Filed September 22, 1908; application by New York, Chicago & St. Louis Railroad Company for approval of refunds on shipments of fertilizer from Fort Wayne, Indiana, to Southern Railway points in Indiana, moving prior to June 9, 1907, the time of taking effect of the act. Investigation, and Commission notified carrier that adjustment could be made without authority of the Commission, and matter closed October 9, 1908.

No. T-1096. Scrap Iron, Switching, C. L., at Vincennes.

Filed September 26, 1908; application by National Rolling Mill Company, of Vincennes, Indiana, for approval of refund on switching charge on cars of scrap iron from Vincennes Bridge Company's plant to applicant's plant on the B. & O. Belt R. R. Investigation showed charges in accordance with tariffs, and application dismissed by order of Commission October 13, 1908.

No. T-1097. Corpse, Anderson to Farmland, Union City to Winchester.

Filed October 15, 1908; applications by A. R. Butler, of Winchester, Indiana, and A. A. Conanoe, of Modoc, Indiana, for approval of refund on corpse moved from Anderson to Farmland, Indiana, and Union City to Winchester, Indiana, respectively, via Indiana Union Traction Company, each movement \$5.00. Investigation showed charges to be in accordance with tariffs, and Commission dismissed application, closing matter October 17, 1908.

No. T-1100. Passenger Fares, Cayuga to Humrick, Illinois.

Filed October 11, 1908; application by D. J. Miller, of Auburn, Illinois, for approval of refund on fare from Cayuga, Indiana, to Humrick, Illinois, via T., St. L. & W. Railroad; fare charged, 25 cents, being paid on train, with 10 cents as excess for cash fare. Investigation showed tariff rates charged, and, after notifying applicant that matter was within the jurisdiction of the Interstate Commerce Commission, Commission dismissed application November 14, 1908.

No. T-1104. Coal, C. L., Hubbel Switch to Coal City, Indiana.

Filed October 17, 1908; application by Coal City Lighting Company for approval of refund on two cars of coal from Hubbell, Indiana, to Coal City, via, Evansville & Indianapolis Railroad; rate, 60 cents per ton. Investigation showed tariff rate charged, and application dismissed by Commission October 23, 1908.

No. T-1109. Coal (Weight), C. L., South Linton to Bloomington.

Filed October 31, 1908; application by Chicago, Indianapolis & Louisville Railway Company for approval of refund on car of coal from South Linton mine to Bloomington, Indiana, consigned Bloomington Coal Company, billed at 64,000 pounds, actual load weight, 47,900 pounds. Investigation showed minimum weight to be in accordance with published tariffs, and Commission ordered application dismissed November 9, 1908.

No. T-1110. Scrap Rails, Terre Haute to Coal Bluff and Return.

Filed November 4, 1908; application by Chicago & Eastern Illinois Railroad Company for approval of refund on four cars of scrap rails moving from Terre Haute to Coal Bluff, Indiana, and from Coal Bluff, Indiana, back to Terre Haute, account rejectment; rate charged, \$1.10 per gross ton, being sixth class rate then in effect. Investigation, and Commission authorized Terre Haute-Brazil rate of 60 cents per gross ton protected on these shipments. Matter closed November 9, 1908.

No. T-1111. Sand, C. L., Rockport to Muncie, Indiana.

Filed November 6, 1908; application by American Lawn Mower Company, of Muncie, Indiana, for approval of refund on car of sand from Rockport, Indiana, to Muncie, Indiana, via Southern Railway, Louisville, Kentucky, and C., C., C. & St. L. Railway; rate charged, 9½ cents per cwt. Investigation showed \$1.25 per ton rate in effect, and Commission notified applicant that such rate was in effect, but called attention to movement being interstate and therefore was without jurisdiction to authorize a refund. Matter closed November 9, 1908.

No. T-1119. Logs, C. L., Alpine and Nulltown to Richmond.

Filed November 11, 1908; application by C. & W. Kramer Company, of Richmond, Indiana, for approval of refund on shipments of logs, C. L., from Alpine and Nulltown, Indiana, to Richmond, Indiana, via C., C., C. & St. L. Railway and P., C., C. & St. L. Railway; rate charged, 7 cents per 100 pounds, and no allowance for staking. Under investigation and pending.

No. T-1122. Passenger Fares, Dunkirk, Indiana, to Roanoke, Virginia.

Filed November 11, 1908; application by J. E. McDaniel, of Eaton, Indiana, for approval of refund on railroad fare from Dunkirk, Indiana, to Roanoke, Virginia, via P., F. W. & C. Railway and connections. Investigation and adjustment procured of \$1.45 each on two tickets, and matter closed November 25, 1908.

No. T-1134. Coal, C. L (Weight)_, Bicknell to Clear Creek.

Filed November 6, 1908; application by Indiana Manufacturers' and Shippers' Association for approval of refund on car of coal from Bicknell, Indiana, to Clear Creek, Indiana, via Vandalia Railroad and Monon Railway; rate charged on weight of 64,000 pounds, while actual load weight was 48,000 pounds, filling visible capacity of car. Under investigation and still pending.

No. T-1148. Express, Indianapolis to Brook, Indiana.

Filed November 27, 1908; application by R. M. Kistler, of Indianapolis, Indiana, for approval of refund on express package containing eight pounds paper stock from Indianapolis to Brook, Indiana, via American Express; total charges being 70 cents. Under investigation and still pending.

REDUCTIONS ON LESS THAN STATUTORY NOTICE.

The Commission has, through this Department, considered and granted sixty applications to reduce rates on less than the statutory notice of 10 days, thereby affording relief to shippers whose traffic must necessarily move before a reduction in the rate could be published under the statute.

SPECIAL INVESTIGATIONS AND REPORTS TO THE COMMISSION.

This Department has, under the instruction of the Commission, made special investigations and submitted reports in the following matters:

Construction of express rates in Indiana, and basis of reduction thereof, together with rate check. Special report to Commissioner Wood.

Investigation of amount and class of traffic handled by the American Express Company between offices in the State of Indiana. Special report to Commissioner Wood.

Investigation and report of rates, practices, car service and track connections in handling coal traffic at Bloomington, Indiana. Special report to Commissioner McAdams.

Investigation at Muncie, Salem, Borden and other offices of American Express Company to determine amount of and classify traffic. Special report to Commissioner Wood.

Investigation of service rendered in moving gravel from pits located in and adjacent to Lafayette, Indiana, by Monon Railway Company. Special report to Commissioner Dowling.

Report on carload minimum weights.

Report on reduction in proportional rates from Mississippi River points to Missouri River points.

Report of rates on coal from Indiana fields to northern Indiana points. Special report to Commissioner Wood.

Report on rates on lumber from L. H. & St. L. Railway points in Kentucky to Indiana points. Special report to Commissioner Wood.

In addition to these specifically named reports, there have been numerous other reports on rates and traffic conditions submitted by this Department to the Commission, and almost constant quoting of rates to the public by correspondence, telegraph and telephone.

CONFERENCES.

Conferences between shippers and carriers have been authorized by the Commission whenever it was apparent that any benefit could be derived therefrom, and in many of the rate adjustments heretofore reported by case, a conference was the medium through which the negotiations were brought to a satisfactory conclusion. The following are the more important conferences held.

CONFERENCE WITH NEW ALBANY SHIPPERS, RE K. & I. B. & R. R. RATES.

This conference was held under the personal direction of Commissioner Wood and was attended by many of the shippers of New Albany. The question of the application of a higher scale of rates across the river on traffic from the South destined to New Albany than was applied on traffic passing through New Albany was considered, and after a full investigation, both at Indianapolis, and Louisville and New Albany, the Commission instituted proceedings before the Interstate Commerce Commission, and which proceeding was decided in favor of the shippers at New Albany, and the carrier ordered to charge the same rate on all its through traffic.

CONFERENCE WITH REPRESENTATIVES OF LINES AT INDIANAPOLIS RE RECONSIGNMENT OF COAL FROM INDIANA MINES.

This resulted in a series of conferences under the direction of Commissioner Wood, in which the question of uniform practices and rates of charge for the reconsignment of Indiana coal at Indianapolis was considered, it being alleged by coal jobbers at Indianapolis that each line handled and charged differently for this traffic. After several lengthy conferences, the lines agreed to make a charge of \$2.00 per car for all reconsignments of coal at Indianapolis, including eastern coal, and to allow no free reconsignments, thereby putting in effect what is known as the Chicago rule. This agreement was not carried by all the lines on eastern coal, and applications were made to the Commission by the lines, which had entered into the agreement upon the understanding that eastern coal was to be included, to be relieved from making a charge on reconsigned coal at this point, which applications were granted by the Commission, and the situation is practically unchanged.

CONFERENCE WITH TARIFF REPRESENTATIVES OF EXPRESS COMPANIES TO FORMULATE RULES FOR THE CONSTRUCTION AND FILING OF TARIFFS WITH COMMISSION.

A conference was held with the tariff representatives of the express lines operating in the state, and rules governing the construction and filing of express tariffs with the commission were formulated, and submitted to the Commission for approval, and appear at length in another portion of this report.

CONFERENCE WITH SHIPPERS AND CARRIERS FOR ESTABLISHMENT OF ADDITIONAL OIL SHIPPING DAYS AT INDIANAPOLIS AND TERRE HAUTE.

A conference was held under the direction of Commissioner Wood with the representatives of the carriers having lines into Indianapolis and Terre Haute, and with the representatives of the Indiana Manufacturers' and Shippers' Association to consider the establishment of additional days in each week for the acceptance and movement of less than carload shipments of oil from Indianapolis and Terre Haute, the carriers having restricted the days in which they would accept and move such shipments of oil to two and three days a week. The carriers submitted their views as to the dangerous nature of the commodity and the slight revenue derived from less than carload shipments, and the shippers claimed the loss of many orders because of their inability to ship in time. At the conclusion of the conference, the carriers notified the Commission that they would later advise definitely as to their position in the matter, which was thereafter done by their declining to establish additional shipping days at either point.

RECOMMENDATIONS.

I would respectfully recommend the following:

Authority in the Commission to approve refunds in cases where exorbitant charges are made by the carrier, through erroneous quotations by agents, misrouting, non-publication of reasonable rate, failure to file tariff, upon admission of unreasonableness of rate by carrier and its publication for a certain period.

Local agents be required to maintain filing cases for tariffs, with complete files of tariffs, periodically checked up by carrier.

Filing of routing sheets by carriers for all joint rates in effect on intrastate traffic in this state, but without naming divisions.

Publication of Rules and Regulations Governing the Construction and Filing of Passenger and Freight Tariffs with the Commission, in like form with the Rules Governing the Filing of Express Tariffs, as the present Circulars of this Department A-1 and B-1 are insufficient.

The republication of certain express company tariffs which are now on file with the Commission in the form of handwritten rate tables, and are not copies of the tariffs in the hands of the agents.

An investigation of switching rates throughout the state published by certain carriers where apparent discriminations exist in the charging of different rates of charge to a given switch or industry from different connections, where the service is practically similar.

Respectfully submitted,

L. E. MORTON,
Clerk.

APPENDIX VI

Rules of Procedure

RULES ADOPTED

BY THE

Railroad Commission of Indiana

JANUARY 1, 1908.

1. SESSIONS AND INFORMAL HEARINGS.

A. *Office*.—The office of the Secretary of the Commission will be open each work day from 8 a. m. to 5 p. m., where petitions, complaints and other documents may be filed for the consideration of the Commission, and where information may be obtained concerning the pending business of the Commission.

B. *Hearings*.—Public hearings of contested cases will be held at room 85 of the State House, unless otherwise ordered by the Commission, of which notice will be given to the interested parties.

C. *Informal Complaints*.—All informal complaints in writing brought to the attention of the Commission, concerning any matter within the jurisdiction of the Commission, will be at once investigated under direction of the Commission, and if well founded, an effort will be made by the Commission to adjust the cause of complaint between the parties.

2. RECORDS.

A. *Entry Docket*.—There will be kept in the office of the Secretary an Entry Docket, in which all contested cases will be entered, as filed, bearing consecutive numbers.

B. *Final Record*.—Also a Final Record, in which the proceedings of the Commission, in contested cases, shall be entered at length by the Secretary under direction of the Commission.

C. *Adjustment Record*.—Also an Adjustment Record, in which the proceedings upon all complaints which do not result in a contested hearing shall be briefly entered by the Secretary under the direction of the Commission.

D. *Inspection Records*.—Also inspection records, in which shall be briefly entered all proceedings in the matter of inspection of railroads, inspection of cars and reports of accidents.

3. PLEADINGS.

(A and B amended May 21, 1908.)

A. The only pleadings required shall be a petition, offer of satisfaction, answer and petition for a rehearing. As many copies of the petition shall be filed as there are respondents named and copies of the answer shall be delivered to the petitioner by the respondent filing same.

B. A copy of the petition shall be served with the summons and the respondents called upon to satisfy the complaint in five days after service of summons. An answer will be due in ten days after service of summons. The cause will stand for trial ten days after service of summons is complete as to all respondents, unless otherwise ordered by the Commission.

4. WITNESSES.

A. Subpoenaes for witnesses, or to produce documents or records will be issued by the Secretary at the request of parties or upon the order of the Commission, directed to any constable or sheriff in the State.

B. All expenses of serving witnesses and their mileage and per diem must be paid by the party calling the witness.

C. For serving summonses and subpoenas ordered by the Commission, the Commission will pay the fees paid to sheriffs for serving like process from the circuit courts.

D. The Commission will pay two dollars per day and two cents per mile for travel within the state to all witnesses whose attendance is required by order of the Commission.

5. LONG AND SHORT HAUL.

A. Before hearing a petition to be allowed to charge less for the long than for short hauls as provided by the laws of Indiana, the Commission will publish a notice of the pendency of the petition in some newspaper in the vicinity where the permit is to operate. Such notice will be published but a single time, not less than ten days before the hearing. The expense of publication shall be paid by the petitioner. Any party interested in the petition may appear in person or by counsel and resist the same.

6. TRANSCRIPTS.

A. Upon request the Commission will, through its Secretary, furnish certified copies of any record or document on file with the Commission, or a transcript of any evidence delivered in any hear-

ing before the Commission, excepting that transcripts of reports of accidents and evidence taken concerning accidents will not be furnished except upon petition filed and special order of the Commission with reference thereto.

B. A charge of twenty cents per page will be made for all such transcripts, and the fees when paid will be deposited daily in the State treasury.

RULES CONCERNING INTERLOCKING DEVICES.

RULE NO. 1. When plans are presented for a crossing which is to be interlocked by agreement between the connecting roads, the road presenting the plans must furnish the Commission with the approval of the interested connecting lines indorsed upon the plans, or a letter from the proper officer thereof approving the plans presented.

RULE NO. 2. When a petition is filed with the Commission pursuant to Section 3 of the Acts of 1897, there shall be filed with the same as many copies as there are roads interested in the crossing. Such petition and accompanying maps shall comply with such section, and in addition thereto embrace the following:

(a) Copies of all contracts or agreements existing between the connecting roads concerning the crossing.

(b) An estimate of the probable cost of constructing a manual interlocking device at the crossing.

(c) An estimate of the probable cost of constructing a power interlocking device at the crossing.

(d) An estimate of the probable cost of annual maintenance and operation for each character of device.

(e) A statement of the number of levers necessary to properly control the crossing, and the functions properly chargeable to each road.

(f) A statement of the daily train movement over such crossing by each company.

RULE NO. 3. Petitions filed pursuant to Rule No. 2 will be heard at the site of the crossing, or at such other place as the Commission may determine after notice to the parties. The roads against which the petition is presented at the time of the hearing may file an answer admitting or denying the statement in the petition and may file a counter statement concerning the matters required by "a" to "f" inclusive of Rule 2.

RULE NO. 4. If a crossing is ordered interlocked upon petition, and the interested roads fail, for thirty days after the Commis-

sion's order, to agree as to the manner of complying with the Commission's order and to proceed with the work, then the Commission, after notice to the roads and a hearing will assign the construction, maintenance and operation of the device to one of the roads, and authorize it to collect compensation from the other roads, in accordance with the order of the Commission.

RULE NO. 5. All plans to protect crossings, presented by agreement of the roads, or to comply with the Commission's order upon petition, must be drawn to a scale of not less than fifty feet to one inch, and be filed in duplicate and contain the following:

(a) Map of the territory, showing all the tracks, curves, sidings, switches, cross-over tracks and connecting tracks between roads, also all buildings, trees and other obstructions to view. Also the proposed location of the interlocking tower.

(b) All grades upon all roads shall be plainly marked on either side of the crossing. The location of all bridges between the derail and crossing shall be shown. The elevation or depression of all tracks above or below the contiguous territory shall be shown.

(c) A complete showing of the ground plan of the proposed device in all its parts, and especially the location of derails and home and distant signals. Tower construction and interior plan will be passed upon only after completion.

RULE NO. 6. In all devices hereafter constructed or rebuilt the derails in the main track of single-track steam lines, and in the track taking the current of traffic in double-track steam lines, shall be located not less than five hundred feet in advance of the crossing or fouling point which it is intended to protect, unless the Commission shall determine, after investigation, that local conditions warrant a different location, in which event the Commission shall fix the location of the derail.

(a) In all devices hereafter constructed or rebuilt, reverse derails in the track of steam lines shall be located not less than two hundred feet in advance of the crossing or fouling point which they are intended to protect, unless the Commission shall determine, after investigation, that local conditions warrant a different location, in which event the Commission shall fix the location of the derails.

(b) In all devices hereafter constructed or rebuilt the derails in the track of traction or interurban lines shall be located not less than two hundred feet in advance of the crossing or fouling point which they are intended to protect, unless the Commission shall de-

termine, after investigation, that local conditions warrant a different location, in which event the Commission shall fix the location of derails.

(c) If local conditions exist, requiring a different location of derails, than as required by this rule, a detailed, written statement of such local conditions shall be filed with the plans and submitted to the Commission for its consideration.

RULE No. 7. If, in the judgment of the Commission, the use of guard rails is warranted, guard rails of such length as the Commission may determine will be approved in plans and plants having derails five hundred feet or more from the crossing or fouling point. In all other cases guard rails will not be approved or allowed, except under special conditions, to be shown by plans, and detailed, written statement accompanying plans for submission to the Commission, the Commission reserving authority to make exceptions to this rule when the special conditions demand it, or to order the use of guard rails upon its own motion.

(a) The use of guard rails, contrary to this rule, in plants now in operation is condemned, and the different roads are requested to remove the same by March 1, 1907, unless within that time they shall make to the Commission a showing of special conditions necessitating their use, and procure the authority of the Commission for their continuance.

RULE No. 8. The Commission will not inspect complete plants until the applicant files with the Commission:

(a) Complete layout of plant, as required by Rule No. 5, having all points of control duly numbered to correspond with the number of the lever used in its control.

(b) Complete locking sheet showing the exact manner in which the plant is installed.

(c) Complete manipulation sheet, showing manner of operation in setting up each route governed by the plant.

(d) Copy of the rules issued by the applicant for the government of employes having charge of interlocking devices.

RULE No. 9. Completed plant must be connected up ready for service before inspection is requested, with instructions that all trains come to a full stop at home signal.

RULE No. 10. The Secretary is ordered to tax to and collect from each applicant for the approval of plans or plant the follow-

ing fees: Ten dollars upon behalf of the Commission; seven dollars and fifty cents on account of Engineer's services in examining and reporting upon plans; fifteen dollars and traveling expenses on account of Engineer's services in examining and reporting upon the construction and operation of the plant. Such sums, when collected, shall be daily paid to the State Treasurer.

RULE NO. 11. All companies having charge of the maintenance and operation of such plants shall inspect the same monthly and report the results of such inspection to the Commission not later than the first day of each succeeding month.

(a) All companies interested in the operation of plants, but not charged with the maintenance and operation thereof, shall inspect the same once each sixty days and report to the Commission the result of the inspection.

APPENDIX VII

Circulars

Circulars.

STATE OF INDIANA. RAILROAD COMMISSION OF INDIANA.

CIRCULAR No. 19.

INDIANAPOLIS, IND., January 14, 1908.

To All Traction or Interurban Railroad Companies:

It being the duty of the Railroad Commission "to keep informed as to the condition of railroads and railways, and the manner in which they are operated with reference to the security and accommodation of the public," an inquiry and investigation is hereby instituted as to the rules for operating and despatching cars, and as to the qualifications of motormen and conductors on the traction lines of this State.

The managers, superintendents and despatchers of said railroads are, therefore, requested and directed to appear before the Commission at its public hearing room on Monday, February 10, 1908, at 10 o'clock a. m., for conference and information upon these subjects, and for the purpose of formulating and adopting uniform operating rules and practices, and for providing for the instruction of conductors and motormen in their rules and duties, and to take such other steps for safe operation and the prevention of accidents as may be agreed on or ordered.

By Order of the Commission.

CHAS. B. RILEY,
Secretary.

STATE OF INDIANA. RAILROAD COMMISSION OF INDIANA.

CIRCULAR No. 20.

INDIANAPOLIS, IND., January 24, 1908.

To Steam and Interurban Railroads:

The Commission has adopted rules requiring each company having charge of the maintenance and operation of interlocking plants to inspect the same monthly and report the inspection to the Commission, and requiring companies interested in interlocking plants, but not charged with maintenance and operation thereof, to inspect the same bi-monthly, in the months of February, April, June, August, October and December, and report the inspection to the Commission. The Commission has prepared forms for these reports and they are now in press.

You are, therefore, requested to indicate the official, his address and title, who will make these reports for your company and how many blanks of each kind will be required for the current year, and to whom they should be sent.

The first inspection under these rules will be for the month of February, 1908. A failure to make the inspection and report will be considered by the Commission as sufficient excuse for putting the machine out of service.

Respectfully,

CHAS. B. RILEY,
Secretary.

STATE OF INDIANA.

RAILROAD COMMISSION OF INDIANA.

CIRCULAR No 21.

To All Railroads:

This Commission and its inspectors are of the opinion that the best and most conspicuous warning signs that can be devised should be put up at all grade and highway crossings. These signs are needed, especially where steam and interurban roads are adjacent and parallel to each other and the highway crosses both practically at the same place; and in such cases the warning signs should indicate the double crossing and the increased danger. Although the statutes of this State do not require such signs, legislation to this effect in this country has been so general and positive that we think the omission in this State was caused by the fact that the railway companies have generally put up these signs without being required by statutory law to do so.

The situation in Indiana, therefore, is that at many, if not most crossings, there are crossing signs; at others, and especially along the interurban roads, whose cars have attained to the speed on steam roads, there are often none. The fact of their general use may cause them to be looked for by travelers, and may on this account increase the danger when they are not to be found. There are 10,000 unprotected crossings at grade in this State, and 63 persons, of whom 43 were killed, have been struck on these crossings in the last six months.

You and each of you are hereby requested and directed to have prepared and put up as early as practicable at all grade crossings on your lines the highway crossing signs indicated in this circular, and to advise the Commission of your action.

By Order of the Commission.

C. B. RILEY,
Secretary.

Indianapolis, Indiana, February 3, 1908.

STATE OF INDIANA.

RAILROAD COMMISSION OF INDIANA.

CIRCULAR No. 22.

INDIANAPOLIS, May 28, 1908.

To All Traction or Interurban Railroad Companies:

In compliance with Circular No. 19 of January 14, 1908, the managers, superintendents and dispatchers of the several electric lines of the State met in conference at the State House, at Indianapolis, on February 10,

1908. At that conference two committees were appointed for the purpose of compiling a code of rules for the government of the employes and the operation of the traction roads.

The Commission is now informed that the labor of the committees is completed and it is requested to call a general conference of the managers and operating officials for the purpose of approving and adopting the code of rules as submitted by the committees.

I am, therefore, directed by the Commission to fix June the 4th, 1908, 2:00 p. m., for this conference to be held at the rooms of the Commission and you are invited and earnestly urged to attend. I am further directed to request that any and all companies that have received a copy of the rules from the chairman of the committee and not replied to his letter, do so prior to the date of this conference.

By order of the Commission.

CHAS. B. RILEY,
Secretary.

STATE OF INDIANA.

RAILROAD COMMISSION OF INDIANA.

CIRCULAR No. 22 (MODIFIED).

INDIANAPOLIS, May 29, 1908.

To All Traction or Interurban Railroad Companies:

You are advised that the conference provided for by our Circular No. 22, issued May 28th, has this day been reassigned for Friday, June 5, 1908, at 2:00 p. m., at the rooms of the Commission.

By order of the Commission.

CHAS. B. RILEY,
Secretary.

STATE OF INDIANA.

RAILROAD COMMISSION OF INDIANA.

CIRCULAR No 23.

INDIANAPOLIS, June 2, 1908.

To All Interurban Railroads:

On account of the fact that the Interstate Commerce Commission will not promulgate a system of accounting for electric railroads until October 1, 1908, being three months after the close of the present official fiscal year, therefore,

It is now ordered by the Commission, That all interurban or electric railroads in this State subject to the control of the Commission shall keep their accounts from July 1, 1908, to July 1, 1909, according to the method heretofore authorized for the fiscal year ending July 1, 1908.

By order of the Commission.

CHAS. B. RILEY,
Secretary.

STATE OF INDIANA.
RAILROAD COMMISSION OF INDIANA.

CIRCULAR No 24.

INDIANAPOLIS, July 28, 1908.

To the Public Press of Indiana:

The Railroad Commission of Indiana respectfully requests your co-operation in advising and warning the people of the State of the great danger of going upon or crossing over highway grade crossings. We enclose you our Accident Bulletin No. 4, which will give you full information on this subject. Your attention is called to pages 5, 6, 7, 10, 13 and 14. We will be greatly obliged if you will mail us a copy of your paper, showing what you write on this important subject.

Respectfully,

CHAS. B. RILEY,
Secretary.

STATE OF INDIANA.
RAILROAD COMMISSION OF INDIANA.

CIRCULAR No. 25.

INDIANAPOLIS, IND., August 1, 1908.

To All Steam and Interurban Railroads:

The Interstate Commerce Commission has recently suggested that carriers of interstate freight adopt, not later than September 1, 1908, uniform bills of lading, copies of which, together with conditions appearing upon the reverse side thereof, are given in the printed report of the Interstate Commerce Commission, cause No. 787, issued June 27, 1908. One of these bills of lading, used in case of "straight consignments" as distinguished from "order consignments," is made non-negotiable by its title.

The Railroad Commission of Indiana desires to call your attention to the fact that a bill of lading, similar to the above mentioned "straight consignment" bill, could not lawfully be used by common carriers in Indiana with respect to exclusively *intrastate shipments*, since our statute expressly provides that "it shall be unlawful for such common carrier to limit by contract or otherwise the negotiability of any bill of lading." (Acts 1907, p. 476.) A penalty is assessed by Sec. 12 of the same act for violation of the above provision. (Acts 1907, p. 477.)

Your notice is also directed to Sec. 3 of the conditions appearing upon the back of said bills of lading, reading in part as follows: "No carrier is bound to transport said property by any particular train or vessel or in time for any particular market *or otherwise than with reasonable dispatch; unless by specific agreement indorsed hereon.*" Such a section, if adopted for use in local shipments, could not operate to nullify the express requirements of the "Shippers' Bill" of 1907 (Acts 1907, p. 435), prescribing that intrastate freight shall move forward to destination not less than an average of fifty miles every twenty-four hours, subject to exceptions named in the Act.

Should you anticipate adopting, for business originating and ending in Indiana, a uniform bill of lading modeled after the forms suggested by the Interstate Commerce Commission, it would avoid misunderstanding between carrier and shipper, and liability, under the penal provisions of the statute, if such local bill of lading is made to conform strictly to the statutes of this State, as above indicated.

In this connection the Commission desires to emphasize the necessity for stating, in all bills of lading issued on intrastate shipments, the classification of the freight, and rate at which the same is carried.

Respectfully yours,

CHAS. B. RILEY,
Secretary.

STATE OF INDIANA.

RAILROAD COMMISSION OF INDIANA.

CIRCULAR No. 26.

Corrected and Revised August 24, 1908.

To All Railroad Companies:

One hundred and seventy-three persons were killed while trespassing on the tracks or cars of the railroads in Indiana during the year ending June 30, 1908. While the railroads are not to be held responsible for these deaths as they are for accidents resulting from negligence, it is an act of humanity and a moral, if not a legal, obligation to prevent this loss of life where it is possible so to do. Accident reports for July and August indicate a large increase in these fatalities, and fatalities at highway grade crossings.

Nine states of the Union make explicit prescriptions with reference to walking on railroad tracks; and three, as all should do, expressly forbid it. The State of Indiana, Burns 1908, Sec. 2280, makes it unlawful only after warning: "The offense defined by the statute consists in entering unlawfully upon the lands of another after having been forbidden to do so by the owner or occupant. The unlawful entry in defiance of the command of the lawful occupant constitutes the offense." *State v. Burns*. Vol. 123, Supreme Court of Indiana, p. 427.

In a recent special case in one of the large cities of the State, where railroad tracks were notoriously and daily used by large numbers of citizens as thoroughfares, the Commission called upon the Division Superintendent to take steps under this statute to abate this practice. We are now advised by the railroad company that "warning signs are placed at the principal streets, that the mayor has promised us that he will have policemen placed to notify people that they are trespassing, and that we do not feel it necessary for a member of the Commission to come to this city for the purpose of taking up this question with these people."

Success and progress in the individual case demonstrate that the same work should be undertaken in order that like results may be achieved at many places in this State.

This Commission is of the opinion that a more systematic, general and determined effort should be made by the railroad companies and local authorities to keep trespassers off the tracks.

We recommend and direct that you shall place warning boards, or trespass signals, at such places, in towns, cities and country, and on such bridges, trestles, cuts, and tracks as are often and repeatedly used by the public for footways or thoroughfares. These warning boards or signals should indicate DANGER and the demand to keep off the property; the following words are sufficient: "DANGER; KEEP OFF. DO NOT WALK OR TRESPASS ON THE RAILROAD."

We recommend and direct that you shall seek the co-operation of local authorities, using this circular if advisable, after placing the warnings referred to, and that you advise the Commission of the results of your efforts, to the end that we may use our official influence to aid you in any case where local authorities refuse to enforce the law. You will take this most important matter up at once and advise us as indicated herein.

By order of the Commission.

CHAS. B. RILEY,
Secretary.

NOTE.—The above circular, corrected and re-issued to make the same more definite, and because some of the railroad companies reasonably object to using the red signs, which might interfere with train movements.

Indianapolis, Ind., August 24, 1908.

STATE OF INDIANA.
RAILROAD COMMISSION OF INDIANA.
CIRCULAR NO. 27.

To All Steam Railroad Companies:

By virtue of an act of the General Assembly, to provide for the safe operation of trains on steam railroads in this state, approved March 12, 1907 (Acts 1907, page 584), it is made the duty of this Commission to call an annual convention of division superintendents and such other operating and despatching officers and employees of the steam railroads as the Commission may deem best, for the purpose of considering railroad accidents that have taken place during the year, and to consider the proper steps to prevent such accidents.

Now, therefore, the Railroad Commission of Indiana calls this convention to take place at its rooms in the State Capitol at 10:00 a. m. on the 10th day of November, 1908.

You are directed to have in attendance at this time, and place, all division superintendents of your lines in this State, and such trainmen, not exceeding two trainmen for each 200 miles of your railroad or fraction thereof, whose service records and length of service in your company, indicate that their counsel and experience may be of benefit to this convention.

You will please advise the Commission, in response to this circular over the signatures of your general managers or general superintendents, the names and post-office addresses of the superintendents and trainmen who will represent your lines at this convention.

By order of the Commission.

CHAS. B. RILEY,
Secretary.

Indianapolis, Indiana, September 28, 1908.

STATE OF INDIANA.
RAILROAD COMMISSION OF INDIANA.

CIRCULAR No 28.

Revising Circular No. 25.

To All Steam and Interurban Railroads:

The Railroad Commission of Indiana has re-examined the subject of the adoption by the railroads of such a uniform bill of lading for intrastate shipments as will conform to the suggestions made by the Interstate Commerce Commission. The result of this inquiry is as follows: The statute of Indiana provides that "it shall be unlawful for such common carrier to limit by contract or otherwise the negotiability of any bill of lading." The negotiability here referred to is that which bills of lading commonly possessed at the time the statute was passed; a bill of lading issued upon a "straight" consignment was not negotiable, in the statutory sense, when the above law was enacted; hence, the addition of the words "not negotiable" to such a bill does not limit its negotiable character and is not in violation of law. This, however, affords no authority for restricting the negotiability of an "order" bill of lading.

Section 3, appearing upon the back of both bills of lading, stipulates that "no carrier is bound to transport said property by any particular train or vessel or in time for any particular market or otherwise than with *reasonable dispatch*; unless by specific agreement indorsed hereon." As the law of Indiana prescribes that intrastate freight shall move forward to destination not less than an average of fifty miles every twenty-four hours (subject to named exceptions), the above condition would be construed to mean that *reasonable dispatch* consisted in moving the freight at not less than the minimum of fifty miles each twenty-four hours.

The Commission emphasizes the necessity for stating in all bills of lading issued on intrastate shipments, both the classification of the freight and the rate at which same is carried.

The above is in substitution for Circular No. 25, heretofore issued by the Commission.

By order of the Commission.

CHAS. B. RILEY,
Secretary.

Indianapolis, Ind., October 15, 1908.

APPENDIX VIII

Reports of Railroads

STEAM ROADS—TABLE No. 1.

ROAD OPERATED—ENTIRE LINE (MILES).

For Companies (Other Than Switching and Terminal) Making Operating Reports.

NAME OF EVERY RAILROAD THE OPERATIONS OF WHICH ARE INCLUDED IN THE INCOME ACCOUNT.

The following notes refer to column headings: 1. Line owned by respondent; 2. Line operated by respondent but owned by another corporation, control being secured through stock ownership. 3. Line operated under lease for specified sum. 4. Line operated under contract or agreement, or where the rent is contingent upon earnings or other considerations. 5. Line operated under trackage rights.

- (1) Can not apportion, as much other property is involved.
- (2) Constituent companies purchased outright; no specific sum for any one item of plant.
- (3) \$1,115,507.91 Indiana on mileage basis.
- (4) Expenditures for permanent improvements are in part charged to operating expenses.
- (5) Cost per mile not given.
- (6) Cost per mile not given. Includes some investment in connection with the bridge.
- (7) \$1,000,000 common stock and \$900,000 mortgage bonds issued account of construction.
- (8) Not given in detail.
- (9) This company passed into hands of receiver Jan. 31, 1908. No records available in regard to information required in this table.
- (10) Includes permanent improvements to leased property.
- (11) Both railway and light plant included.

ELECTRIC ROADS—TABLE No. 11.

SECURITY FOR FUNDED DEBT.

NOTE.—Roads omitted from this table made insufficient or no reports.

NAMES OF ROADS.	Class of Bond or Obligation.	WHAT ROAD MORTGAGED.		
		From—	To—	Miles.
Angola Railway & Power Co. (Note 1)	First mortgage bonds.	Angola, Ind.	Paltytown, Ind.	3.85
Chicago, South Bend & Northern Indiana Railway Co.	First mortgage bonds.	South Bend, Ind.	Entire line.	260.28
Cincinnati, Lawrenceburg & Aurora Electric Street Railway Co.	5 per cent. 20-year gold bonds, due 1919.	Entire line.	Bunker Hill, Ind.	39.39
Evansville & Mt. Vernon Electric Railway Co.	5 per cent. gold bonds, due 1925.	Mt. Vernon, Ind.	Princeton, Ind.	16.90
Evansville & Southern Indiana Traction Co.	4 and 5 per cent. bonds, due 1921, 1923, 1927.	Evansville city property	Newburgh, Ind.	29.55
		Evansville, Ind.	Booneville Junction, Ind.	32.46
		Evansville, Ind.	Rockport, Ind.	10.33
		Newburgh, Ind.	Richland, Ind.	14.34
Evansville, Suburban & Newburgh Railway Co.	5 per cent. first mortgage bonds.	Richland Junction, Ind.	Ft. Wayne, Ind.	20.99
		Lima, Ohio.		3.37
Evansville & Eastern Railway Co.	5 per cent. gold, due 1926.	Ft. Wayne, Ind.		62.50
The Ft. Wayne, Van Wert & Lima Traction Co. (Note 2).	First mortgage bonds.	Ft. Wayne, Ind.	Decatur, Ind.	211.73

Indianapolis & Martinsville Rapid Transit Co.	First mortgage bonds	27,634 50	All.	None.	None.
Kokomo, Marion & Western Traction Co. (Note 5).	Mortgage bonds	20,823 00	All.	All.	None.
Lebanon & Thorntown Traction Co.	Mortgage bonds	12,848 00	2 Passenger Cars.	None.
Louisville & Northern Railway & Lighting Co.	First mortgage bonds	30,525 00	All.	None.	None.
Louisville & Southern Indiana Traction Co.	First mortgage bonds	81,766 00	All.	None.	None.
Marion, Bluffton & Eastern Traction Co.	First mortgage bonds	22,800 46	All.	None.	None.
The Muncie & Portland Traction Co.	First mortgage bonds	29,421 00	All.	None.	None.
Muncie, Hartford & Ft. Wayne Railway Co. (Note 9).	First mortgage bonds	22,249 83	All.	All. a	None.
The Ohio Electric Railway Co. (Note 6).	First mortgage bonds	31,030 00	All.	All.	All.
Terre Haute, Indianapolis & Eastern Traction Co. (Note 7).	First mortgage bonds	42,299 00	All.	None.	None.
Toledo & Chicago Interurban Railway Co.	First mortgage bonds	All.	None.	None.
Winona Interurban Railway Co.	First mortgage, 20-year bonds	32,327 60	None.	None.

Southern Michigan Railway Co.	First mortgage bonds.	33,064 00	All.	None.	None.
St. Joseph Valley Traction Co. (Note 8) ..	Miscellaneous obligations.	44,890 00	All.	All. a	None.
Indiana Union Traction Co. (Note 10) ..	First mortgage bonds.	38,920 48	All.	None.	None.
Terre Haute Traction & Light Co. (Note 11) ..	First mortgage bonds.				
Union Traction Company of Indiana (Note 12) ..					
Totals and averages.		\$45,290 00			

* All the corporate property, real and personal, and all the rights, franchises and privileges of said company now owned or hereafter acquired.

† All the property, entire line.

‡ All the equipment, entire line.

Note 1.—a. The mortgage covers so much other property that this amount is about the proportion charged to road on mileage basis.

Note 2.—Operated by Ohio Electric Railway Co. under lease.

Note 3.—Bonds used as collateral for loan of \$175,000, which has been reduced to \$100,000.

Note 4.—a. Income from operation under lease the Indianapolis & Southeastern Traction Co. mortgaged.

Note 5.—Includes 8.6 miles of line in City of Kokomo, Ind.

Note 6.—Operates Ft. Wayne, Van Wert & Lima Traction Co. in Indiana.

Note 7.—Includes 9.71 miles of Richmond City lines.

Note 8.—\$162,250.77 borrowed on personal obligation of company.

Note 9.—a. Only upon condition of default.

Note 10.—a. Mortgage contains provision concerning income, operative only upon default, etc.

Note 11.—Includes certain electric light property in Terre Haute.

Note 12.—Includes electric street railways in Anderson and other towns and cities.

Indiana Farmers' Institutes

FOR THE YEAR
1907-1908

By W. C. LATTA
Superintendent Farmers' Institutes

PURDUE UNIVERSITY
Lafayette, Indiana
1908

INDIANAPOLIS:
WM. B. BURFORD, CONTRACTOR FOR STATE PRINTING AND BINDING.
1908.

THE STATE OF INDIANA, }
EXECUTIVE DEPARTMENT, }
INDIANAPOLIS, November 4, 1908. }

Received by the Governor, examined and referred to the Auditor of State for verification of the financial statement.

OFFICE OF AUDITOR OF STATE, }
INDIANAPOLIS, November 12, 1908. }

The within report, so far as the same relates to moneys drawn from the State Treasury, has been examined and found correct.

JOHN C. BILLHEIMER,
Auditor of State.

November 13, 1908.

Returned by the Auditor of State, with above certificate, and transmitted to Secretary of State for publication, upon the order of the Board of Commissioners of Public Printing and Binding.

L. K. BABCOCK,
Secretary to the Governor.

Filed in the office of the Secretary of State of the State of Indiana, November 13, 1908.

FRED A. SIMS,
Secretary of State.

Received the within report and delivered to the printer November 13, 1908.

HARRY SLOUGH,
Clerk Printing Bureau.

LETTERS OF TRANSMITTAL.

W. E. STONE, PH. D., LL. D., *President Purdue University,
LaFayette, Indiana:*

DEAR SIR—In behalf of the committee on Farmers' Institutes, I respectfully submit herewith the annual report of the Farmers' Institute work for the year ending September 30, 1908.

Following the report proper will be found a schedule of meetings to be held the coming season; also the program, and a brief account of the third Normal Institute for Speakers and eleventh annual conference of Farmers' Institute Workers, held in October, 1908.

Very respectfully yours,

W. C. LATTA,
Superintendent Farmers' Institutes.
Purdue University,
LaFayette, Indiana,
November 3, 1908.

LaFAYETTE, IND., November 3, 1908.

HONORABLE J. FRANK HANLY, *Governor of Indiana, Indianapolis, Ind.:*

DEAR SIR—I have the honor to transmit herewith the annual report of the Superintendent of Farmers' Institutes, in accordance with the act of the Legislature of 1889, amended March, 1901.

Respectfully yours,

WINTHROP E. STONE,
President of Purdue University.

INDIANA FARMERS' INSTITUTES.

REPORT OF THE SUPERINTENDENT FOR THE YEAR 1907-08.

The first important event of the year which began October 1, 1907, was the tenth annual conference of Institute Workers and second Normal Institute. The proceedings of this conference, which was held in October, 1907, were published in the last annual report of the State Superintendent.

The Farmers' Institute season opened November 18, 1907, and closed February 28, 1908. An occasional independent Institute, however, was held in March, 1908.

Early in February, 1908, the County Institute chairmen were requested to make out statistical reports of the Institute work in their several counties for the season ending March 31, 1908. Late in February the chairmen elect for the ensuing year were asked to advise the Superintendent as to the places, dates, and subjects desired for Institutes to be held in their respective counties in the season of 1908-09. The spring and summer months of 1908 were occupied in the preparation of the annual report of the State Superintendent of Farmers' Institutes, preparing the program for the Normal Institute and Conference of Workers to be held in October and in arranging the schedule of Institutes for 1908-09.

Special sessions for boys and girls, for women and for the discussion of agricultural education and rural school improvement were reported by a considerable number of the Institute Associations. Live stock, feeding, dairy, fruit, market garden, and soil sessions were also frequently held.

Soil renewal, corn improvement, feeding problems,

poultry, farm dairying, creamery work, fruit culture, forestry, foods, the home and household management were important topics considered at many of the Institutes.

On the following pages will be found a fuller presentation of the important features of the Farmers' Institute work of the year.

NUMBER OF INSTITUTES HELD.

The number of meetings scheduled was 300; of these 16 failed; extra meetings to the number of 37 were held; total number of meetings actually held was 321; of these 161 were one-day; 156 two-day, and 4 three-day Institutes; total number of Institute days 485; total number of sessions held was 1,112.

ATTENDANCE AT THE INSTITUTES.

The following table gives a complete list of the Institutes held with the number of sessions and the attendance at each meeting in 1907-08. The attendance is the average of the number present at the several sessions of each meeting. The reports of secretaries and speakers were consulted in making up the table. The county aggregates of attendance at the right of the table were obtained by adding together the numbers showing the overage attendance at each of the several meetings held in the county:

*Independent institutes.

Number of Winter Institutes held 1907-08, 321; 1906-07, 273; 1905-06, 250.
Number of Institute sessions held 1907-08, 1,112; 1906-07, 980; 1905-06, 918.
Average attendance 1907-08, 176; 1906-07, 181; 1905-06, 197.

The average attendance is a little less than in the last two previous years. This is doubtless due in part to the greater number of sessions held at small outlying points, and in part to a number of women's sessions, which were attended, as a rule, only or chiefly by women. The number of sessions is 132 more than last year, which was the highest up to that time.

It will be observed that the aggregate attendance, obtained by adding the numbers giving the average attend-

ance at the several meetings, passed the 50,000 mark last season. The actual number of persons attending is, of course, considerably larger. The figures showing the attendance by counties are, in each case, the aggregate of the averages for the several meetings held in the county.

Notwithstanding the slightly reduced attendance, 49 of the 92 counties of the state report an increase in attendance over the previous year. Each one of 42 counties shows an attendance of over 500 the past season, and each of 11 counties reports over 1,000 in attendance.

The local Institute officers whose meetings show a falling off in attendance compared with previous years should advertise their meetings more thoroughly hereafter. There is no reason why at least three-fourths of the counties should not show a respectable increase in attendance for several years to come. This would greatly enhance the benefits of the Institute work.

NUMBER OF INSTITUTES AND AVERAGE ATTENDANCE IN EACH MONTH.

The following table shows the number of meetings held and the average attendance in each month, also the average number of meetings and average attendance in each month for the past three years.

TABLE SHOWING NUMBER OF MEETINGS AND AVERAGES BY MONTHS.

MONTHS.	1905-6.		1906-7.		1907-8.		AVERAGE OF THREE YEARS.	
	No. of In- stitutes.	Average Attend- ance.	No. of In- stitutes.	Average Attend- ance.	No. of In- stitutes.	Average Attend- ance.	No. of In- stitutes.	Attend- ance.
November....	22	101	19	87	22	105	21	98
December....	83	150	67	134	89	123	80	136
January.....	69	258	94	211	97	199	87	220
February.....	66	219	84	205	76	156	75	193
March.....	10	236	5	216	8	226

Excluding March, in which month but few meetings were held, it will be observed, from the column giving the three year averages, first, that in number of meetings, Jan-

uary stands first, December second, February third, November fourth; and second, that in average attendance January comes first, February second, December third, and November fourth.

The low attendance in November and in early December is, no doubt, due to the fact that the farmers are still busily engaged during this part of the year in harvesting the corn crop. The table makes it clear that January and February are the months most favorable for Farmers' Institute work in Indiana. It will be well to note, however, that the massing of meetings in these two months makes it more difficult to arrange a working schedule of meetings and supply the most efficient speakers.

SUMMARY OF INSTITUTES AND ATTENDANCE BY YEARS.

YEAR.	Number Counties Holding Institutes.	Total Number Institutes Held.	Average Attend- ance.	Aggregate Attend- ance.
1889-90.....	50	50		
1890-91.....	41	41		
1891-92.....	90	102		
1892-93.....	89	95		
1893-94.....	92	95		
1894-95.....	92	97	118	11,446
1895-96.....	92	103	272	28,016
1896-97.....	92	104	232	24,128
1897-98.....	92	108	272	29,376
1898-99.....	92	102	250	25,500
1899-00.....	92	104	269	27,976
1900-01.....	92	104	279	29,016
1901-02.....	92	197	191	37,603
1902-03.....	92	179	192	34,226
1903-04.....	92	175	338	59,189
1904-05.....	92	226	329	74,467
1905-06.....	92	250	197	49,325
1906-07.....	92	273	181	49,476
1907-08.....	92	321	176	50,592

In consulting the above table, it should be born in mind, first, that the high averages and aggregates in attendance for 1903-04 and 1904-05 were due to a different method of computing attendance which greatly exaggerated the real number present; and, second, that the method employed for the other years, as explained on a previous page, falls considerably below the actual number of persons attending the Institutes.

EXPENDITURE OF STATE INSTITUTE FUND.

The classified disbursements of the state appropriation for Farmers' Institutes for the year ending September 30, 1908, as certified to by the Secretary of Purdue University, are as follows:

DR.

Received of State Treasurer.....\$10,000 00

CR.

Mileage and per diem of speakers.....	\$6,293 12
Salary of Superintendent.....	1,800 00
Expenses of Annual Conference in 1907.....	871 46
Clerical work	551 97
Printing, stationery and postage.....	247 95
Printing annual report for 1906-07.....	103 16
Traveling expenses of Superintendent.....	76 94
Express, freight, telephone, etc.....	22 60
Supplies	10 25
Charts	9 50
Membership dues American Association Farmers' Institute Workers	5 00
Miscellaneous	4 05
Repairs	4 00
	<hr/>
	\$10,000 00 \$10,000 00

I, Edward A. Ellsworth, Secretary of the Board of Trustees of Purdue University, hereby certify that the expenditures from the above mentioned fund are full and correct to the best of my knowledge and belief.

(Signed) EDWARD A. ELLSWORTH,
Secretary Board of Trustees Purdue University.

FUNDS COLLECTED AND DISBURSED BY THE SEVERAL COUNTY ASSOCIATIONS.

The Institute season of 1907-08 was the first in which the county associations received no state funds for meeting local expenses. The fund hitherto used for this purpose was largely utilized in sending a greater number of speakers than in previous years.

The accompanying table shows the amount of money collected as membership dues, the amount raised in other ways, and also the total receipts and disbursements in each of the several counties of the State for the Institute season of 1907-08.

TABLE SHOWING FUNDS COLLECTED AND EXPENDED IN THE SEVERAL COUNTIES FOR 1907-08.

Whitley.....	15 00	5 00	7 70	12 93	40 63	40 63
Total.....	\$2,209 80	\$267 45	\$3,219 38	\$1,633 73	\$7,330 36	\$6,767 73

The above table was compiled from the reports of the chairmen, several of which were incomplete. It is believed, therefore, that the total receipts amounted to about \$8,000, and that the total disbursements were \$7,000 or more, making a grand total of about \$17,000, State and local funds expended for the year 1907-08.

The above table shows that less than half of the Institute Associations received county funds for the support of the Farmers' Institute work. Three reasons may be given for the failure of many associations to receive coun-

ty funds: first, the annual meetings of nearly all the associations were held prior to the time when the Institute Act of 1907 went into effect. The associations were, therefore, unable, technically, to comply with the feature of the law requiring the adoption and announcement of the plan of work for the ensuing year so far as this related to anything new that might be undertaken; second, many of the County Institute chairmen failed to notify their respective county auditors at the proper time of their desire to avail themselves of the provision of said Act authorizing the payment of county funds for the support of the Institute work; third, in a few instances associations failed to secure paid members and were thus debarred from securing county funds by the expressed terms of the Institute Act.

The table gives ample evidence, however, of the commendable activity of most of the chairmen in securing financial support from private sources and not a few were notably successful in securing ample funds for the support of the Institute work.

Now that the Institute Act of 1907 is better understood by the Farmers' Institute and county officials, it is believed that every association having a paid membership will be able to secure annually, hereafter, county funds for the support of the Institute work.

SPECIAL FEATURES OF THE INSTITUTE WORK.

There is a growing tendency to discuss, at the Farmers' Institutes, special subjects and special interests. Among these may be mentioned soil inoculation, the relation of systems of cropping to soil productiveness, alfalfa, the southern legumes, tomatoes, potatoes, melons and melon blight, the scale insects, spraying, dairy vs. creamery, methods of creaming, starters in butter-making, bacteria in food, in water and in the home, sanitary dwellings, barns and water supply, feeding rations, methods of feeding, and specialized types of live stock as draft horses, beef and dairy types of cattle, object lessons in stock and corn judging, and sometimes class exercises in competitive judging of grains, fruits, potatoes, dairy and culinary products.

SPECIAL SESSIONS.

Special sessions are becoming more frequent from year to year. In many of the counties one or more special sessions were held the past season, and in a few counties nearly every session was special in character. There were special sessions on soils, crops, live stock and dairy, etc.; special sessions for women and for boys and girls, and a number of special sessions relating to school improvement, agricultural education, industrial training, nature study, etc. The total number of special sessions reported for the past winter is:

Reports from 18 counties show that 30 educational sessions were held the past winter; the counties which held educational sessions are Brown, Elkhart, Floyd, Gibson, Howard, Jasper, Laporte, Lawrence, Madison, Marion, Ohio, Orange, Pike, St. Joe, Sullivan, Switzerland, Union and White.

Thirty-two counties report that 67 women's sessions were held. The counties which held women's sessions are Allen, Bartholomew, Boone, Cass, Clinton, Clay, Elkhart, Fayette, Fountain, Franklin, Howard, Huntington, Jasper, Jefferson, Jennings, Lagrange, Lawrence, Marion, Marshall, Morgan, Newton, Perry, Pike, Putnam, Randolph, Rush, Spencer, St. Joe, Tipton, Wells, White and Whitley.

Twenty counties show that 27 boys' and girls' sessions were held. The counties holding such sessions are Daviess, Delaware, Elkhart, Hancock, Huntington, Jasper, Jennings, Laporte, Lawrence, Madison, Ohio, Pike, Randolph, Rush, Scott, Switzerland, Tipton, Vanderburgh, Warrick and White.

WOMEN'S AUXILIARIES.

The Women's Auxiliary, as its name indicates, is an organization supplementary to the Farmers' Institute Association. The Women's Auxiliary sometimes holds a separate session, especially for women, but quite as often, and perhaps more frequently, it takes charge of one or more general sessions of the Farmers' Institute. Thirty-six counties report regularly organized Women's Auxiliaries.

This is considered a good showing, inasmuch as such organization is entirely voluntary and without State aid, except in the way of an occasional assigned speaker. The counties reporting organized Women's Auxiliaries are Allen, Bartholomew, Blackford, Boone, Cass, Clay, Clinton, Daviess, Elkhart, Fayette, Fountain, Franklin, Grant, Hancock, Howard, Huntington, Jasper, Jefferson, Jennings, Kosciusko, Lagrange, Laporte, Marshall, Montgomery, Morgan, Parke, Perry, Pike, Posey, Putnam, Randolph, Rush, Spencer, Tippecanoe, Vanderburgh and Whitley.

INSTRUCTION IN DOMESTIC SCIENCE.

Domestic Science instruction has become a regular and very important feature of the Farmers' Institute work. For several years a trained instructor has devoted almost the entire Institute season to such work and the demand continues unabated. Two features of this instruction merit special attention: One, the help and encouragement given to farmers' wives, and, two, the inspiration given to young women to adequately prepare for the very important mission of the housekeeper and homemaker. The number of meetings attended by specially trained Domestic Science instructors in recent years is as follows: In 1904-05, 31; 1905-06, 56; 1906-07, 68; 1907-08, 46. The only counties of the State which have not been visited by a trained Domestic Science instructor within the last four years are Dearborn, Dubois, Ohio, Steuben, Vermillion, Wabash and Warrick.

In addition to the foregoing, much instruction pertaining to the home and household management has been given at the Institutes by farmers' wives. Nearly all of this instruction has been both acceptable and valuable.

YOUNG PEOPLE'S CONTESTS.

The reports of the Chairmen show that young people's contests of various kinds were held in 34 counties. These contests included the competitive growing and exhibiting of corn, oats, wheat, potatoes and poultry, and the making

and exhibiting of butter, bread and cake. The corn contests were by far the most numerous and popular and some of them were highly successful. In most cases, however, the exhibits showed a lack of training on the part of the contestants as to the standards of merit in the articles exhibited. In a number of instances the contestants received preliminary instruction and the exhibits of corn, in particular, were, in consequence, very creditable, being superior in quality and uniformity to those made by active farmers.

BOYS' AND GIRLS' SCHOOL CLUBS.

The desirability of organizing boys' and girls' school clubs for the purpose of training the young people in the growing and exhibiting of high class farm and dairy products has become apparent to the more observing and thoughtful Institute workers. For this reason the formation of boys' and girls' clubs, under the supervision of the county superintendents of schools assisted by the teachers has been recommended.

The following circular relative to school clubs and the accompanying tentative forms of constitution for such clubs were published and distributed early in the spring of 1908 in the hope that they might prove helpful in securing the organization and maintenance of a goodly number of school clubs during the year of 1908-09.

CONCERNING BOYS' AND GIRLS' SCHOOL CLUBS.

SUGGESTIONS FOR THEIR ORGANIZATION, SUPERVISION AND PLAN OF WORK.

In April, 1907, a circular, giving suggestions for conducting young people's contests of various kinds, under the auspices of the Farmers' Institute Associations, was sent out from the office of the undersigned to the Farmers' Institute workers and county school superintendents of the State.

In accordance with the suggestions offered, or in pursuance of other plans, contests in the line of growing or making and exhibiting farm and home products by the boys and girls were conducted in several counties the present season. Many boys and girls of the public schools were interested and some very creditable exhibits of corn, oats, wheat, poultry, bread, and butter were made.

In several instances the members of boys' corn clubs were previously instructed in the selection of approved types of corn, and the results were evident in the quality and uniformity of their exhibits. In most cases, however, the boys and girls received little, if any, definite previous instruction, and their exhibits clearly showed some lack of knowledge of the various points of excellence to be attained.

The experience of the present season has clearly demonstrated both the value and need of instructing the contestants as to the standards of excellence in the farm and culinary articles which they are encouraged to produce and enter in competitive exhibits at the Farmers' Institutes.

The great *practical* value of these young people's contests is evident to all intelligent observers. When carefully prepared for and properly conducted, these contests have, also, a very high *educational* value, and it is *this* feature which strongly appeals to the county superintendents of schools and teachers.

Experience has already shown that the systematic instruction of the young people in making or growing farm and household products and in selecting articles of the highest excellence for competitive exhibits can be secured through and by means of boys' and girls' school clubs. It has been shown also that such school clubs, when properly conducted, admirably supplement the work of the school.

It is believed that the conditions are now favorable in many sections of the State for the establishment and successful maintenance of boys' and girls' school clubs under the joint auspices of the Farmers' Institute Associations and the public schools. The local Farmers' Institute managements can furnish the necessary incentive in the way of premiums for an annual contest in growing or making, exhibiting and judging products of the farm and home, and in presenting papers describing the methods employed. The county superintendents of schools, assisted by their corps of teachers, can organize the boys and girls into school clubs and secure for them the necessary preliminary instruction to enable them to make truly

educational and highly successful competitive exhibits at the Farmers' Institutes the following season.

Where not already associated with existing school clubs, the boys and girls between the ages of, say, ten and twenty might be organized into township or county clubs. If a county club is organized it should be divided into township branches with the principal school in the township, if centrally located, as the headquarters for the club. As the work of the girls would properly differ much from that of the boys, it would be best, doubtless, to organize separate clubs for them. Each club should be officered, conducted and its programs largely rendered by its own active members under the guidance and assistance of one or more teachers. Each club might hold, on Saturdays, monthly, bi-monthly or quarterly meetings, according to the wishes or convenience of its members. When farm crops are to be considered, the meetings should be so timed that each topic may be taken up in reference to the season. At least half the time of each meeting should be devoted to the consideration of such subjects as will prepare the members for the annual contest at the end of the year. Some time may be devoted, also, to music, recitations and general subjects.

The following suggestive outlines of special subjects will serve to show what might be undertaken respectively by boys' and girls' clubs the first year:

I. SPECIAL TOPICS FOR A BOYS' SCHOOL CLUB FOR ONE YEAR.

FIRST MEETING.—*Special Topic:* Selection of seed corn from the standing crop—when, how and why. Members will bring desirable and undesirable types of stalk and ear for study and comparison.

SECOND MEETING.—*Special Topic:* Points of excellence in corn—study of the score card. Members will bring various types of ears for illustration and shell certain ears to get per cent. of grain and cob.

THIRD MEETING.—*Special Topic:* How to use the score card; an exercise in scoring ten ears of corn by each member.

FOURTH MEETING.—*Special Topic:* Comparison of home varieties of corn with the standard ear*, as to length, circumference, proportion of grain and cob, color of grain and cob, regularity in rows and uniformity in size and shape of kernels, etc.

FIFTH MEETING.—*Special Topic:* Testing and grading seed corn. Members will exhibit or demonstrate methods used. A second exercise by each member in scoring corn.

SIXTH MEETING.—*Special Topic:* Preparation of soil, planting and culture of corn to secure perfect stand and greatest yield.

II. SPECIAL TOPICS FOR A GIRLS' SCHOOL CLUB FOR ONE YEAR.

FIRST MEETING.—*Special Topic:* Winter and spring wheat—where grown, characteristics, and uses. The club should have samples of each for study and comparison.

SECOND MEETING.—*Special Topic:* Burr, roller-process, and whole-wheat flour—their characteristics, composition, and uses. The club should have and carefully examine samples of each kind of flour.

*Approved by the Corn Growers' Association for this section of the State.

THIRD MEETING.—*Special Topic:* Yeast—its nature and use in bread-making; effect of temperature on growth of yeast plants; hops in home-made yeast; wild yeast. Members will bring samples of home-made yeast mixtures and also of commercial yeasts.

FOURTH MEETING.—*Special Topic:* Bread—ingredients, mixing, rising, kneading. Study and use of score card. A loaf of bread is needed for demonstration.

FIFTH MEETING.—*Special Topic:* Baking bread—the objects; time and temperature for; effect of over and under baking; general appearance, form, size, color, crust, and crumb of a well baked standard* loaf of bread. Members will each bring a loaf of white yeast bread, baked the day before, and each will score one or more loaves of bread.

SIXTH MEETING.—*Special Topic:* Bread—examination and sampling of loaves of bread, baked by the members the day before, with mutual criticism. A second exercise by the members in judging bread by the score card.

The topics⁸ in the above outlines might be condensed and considered in four meetings or they might be easily extended for eight or ten meetings.

A highly successful corn grower and an expert judge of corn might be invited to address the boys' club on corn culture and on judging by the score card. In like manner a first-class bread maker and a good judge of bread might be asked to address the girls' club. With the above named possible exceptions, the work of the club should be performed by its own active members.

The second year the boys' club might give attention to corn improvement; the third year to culture and improvement of the small grains; the fourth year to fruit, and the fifth to dairying and so on.

The girls' club might consider in successive years: butter making; the stitches used in sewing—basting, gathering, over-casting, felling, button-hole, etc.; underwear; cotton waists and aprons. If thought best the club might take up, the same year, both bread and sewing.

Half-day sessions, beginning, say, at 9 a. m. or 1:30 p. m., will be most practicable as a rule. If but four meetings are held, it will be better to hold both morning and afternoon sessions. Whenever a judging exercise is undertaken, there should be two sessions, the forenoon being given to discussion and the afternoon to instruction in judging and to the scoring of corn or bread by the members.

In order to provide stationery and postage, procure reference books and illustrative material, the members should pay annual dues. The dues may be uniform for all, or graded as to ages, somewhat as follows: Under 12, 10c.; 12 and under 15, 15c.; 15 and under 18, 20c.; 18 and over, 25c.

The bulletins and special circulars of the Experiment Station, LaFayette, Indiana, will be furnished free. The farmers' bulletins of the National Department of Agriculture, Washington, D. C., on crops, foods, etc., can be had usually for the asking or for a few cents. These bulletins and circulars will prove very helpful to the members in preparing for the meetings of the club. Samples of approved forms of score cards for corn, bread,

*As given in the bread score card.

and butter, explaining the several points of excellence, will be sent from the office of the undersigned to each club upon request.

The Farmers' Institute Chairman, the President of the Woman's Auxiliary, and the committee having immediate supervision of the young people's contest should confer with the County Superintendent of Schools and the teachers in charge of the school clubs and agree upon premiums of real utility and educational value. The following will serve as examples of suitable premiums:

- (1) Books—Manuals, and on science, travel, biography, etc.
- (2) Useful articles as a seed-grader, universal bread maker, milk tester, etc.
- (3) Excursions to some place or point of interest as the State Fair, Experiment Station, a creamery, canning factory, a noted orchard, farm or herd.
- (4) Scholarships covering the expenses of attending the Farmers' Short Course, or the Winter School of Agriculture at Purdue University.

In several instances, boys have been awarded, as a premium, their expenses while attending the Farmers' Short Course or the Winter School of Agriculture of Purdue. This premium (expenses in the Winter School of Agriculture), should not be awarded to anyone who has not completed, at least, the common school course of study or to anyone under eighteen years of age. School boys and girls who may win a scholarship, in the Winter School of Agriculture, should complete the course of study in the home school before availing themselves of the premium won. Farmers' Institute officials should, therefore, be willing to hold the premium money in trust, in such cases, until the winners have completed the course in the public school. Further the boys and girls, who may win the above named premium and who have the necessary preparation, should have the option of entering the *regular* course in Agriculture or Household Economics of Purdue University.

In order to further aid in the establishment and maintenance of successful school clubs, the undersigned will render assistance gladly, if desired, in the way of information, suggestions or advice to Farmers' Institute officers and committees, County Superintendents of Schools and teachers, and also to the officers and committees of boys' and girls' school clubs.

Tentative forms of constitution for boys' and girls' school clubs accompany this circular. Others will be sent by the undersigned upon request.

W. C. LATTA,

Superintendent Farmers' Institutes.

Purdue University, LaFayette, Indiana, February 28, 1908.

PROPOSED FORM OF CONSTITUTION FOR A BOYS' SCHOOL CLUB.

Article I.—Name.

The name shall be the Boys' School Club of
Township, County, Indiana.

Article II.—Objects.

The objects shall be: (1) to gain knowledge of the best methods of Agriculture, (2) to prepare for the annual contest conducted by the Farmers' Institute Association, (3) to secure literary culture, and (4) to acquire a working knowledge of parliamentary usage.

Article III.—Members.

Any boy between the ages of ten and twenty years, living within the county, may become a member by signing the constitution and paying the annual dues.

Article IV.—Officers.

Section 1. The officers shall be a President, Vice-President, Recording Secretary, Corresponding Secretary, Treasurer, Critic, and a Door-Keeper.

Sec. 2. The officers shall be elected by ballot at the last (annual) meeting of the club each year. They shall take office the first meeting of the ensuing year and continue until their successors are duly elected.

Article V.—Duties of Officers.

Section 1. The duties of the President, Vice-President, Secretary, and Treasurer shall be those which usually appertain to these offices.

Sec. 2. The President shall appoint members to fill any vacancies that may occur by resignation or removal. The Critic shall call attention to mistakes in language, gesture, and general bearing, of those who take part in the formal proceedings of the club; look up and report upon disputed points as to grammar, choice of words, pronunciation, and parliamentary usage. The Door-Keeper shall see that the place of meeting is kept comfortable, tidy, and properly ventilated, and look after the comfort of the members and any invited guests.

Sec. 3. The President, Vice-President, and Recording Secretary shall be the executive and also the program committee of the club.

Article VI.—Duties of Members.

It shall be the duty of the members to attend each meeting of the club and perform every part assigned by the President or by the Program Committee. Absence or non-performance of duty, due to sickness or other unavoidable cause, shall be excused.

Article VII.—Dues.*

Section 1. The annual dues, payable at the opening of each year, shall be: For members under twelve years old, 10c; twelve and under fifteen, 15c; fifteen and under eighteen years, 20c; eighteen years and over 25c.

*The dues may be uniform if preferred.

Sec. 2. Three months' arrearage in dues will forfeit membership, but the member in arrears may be reinstated by a majority vote of the members present at any regular meeting, and the payment of dues.

Article VIII.—Meetings.

Section 1. The club shall meet on the Saturday
(1st, 2d, 3d or 4th)
in
(Name the several months in which the meetings will be held.)
..... at
(Name of the club headquarters.)

Sec. 2. The hour of meeting shall be fixed by the Program Committee.

Sec. 3. The date or place of meeting may be changed temporarily by vote of the majority of the members present.

Sec. 4. A special meeting may be called at any time by the President upon written request of five members.

Article IX.—Order of Business.

- (1) Call to order.
- (2) Roll call.
- (3) Reading minutes of previous meeting.
- (4) Reports of officers (for annual meeting only).
- (5) Reports of committees.
- (6) Miscellaneous business.
- (7) Appointment of committees.
- (8) Special order of the day.
- (9) Adjournment.

Article X.—By-Laws.

The Club may enact such by-laws, not in conflict with this constitution, as may seem necessary.

Article XI.—Parliamentary Guide.

Robert's Rules of Order.

Article XII.—Amendments.

This constitution may be amended at any regular meeting by a two-thirds vote of the members present, provided notice of the amendment was presented in writing at the previous regular meeting.

PROPOSED FORM OF CONSTITUTION FOR A GIRLS' SCHOOL CLUB.

Article I.—Name.

The name shall be the Girls' School Club of
Township, County, Indiana.

Article II.—Objects.

The objects shall be: (1) to gain knowledge of Household Economics, (2) to prepare for the annual contest conducted by the Farmers' Institute Association, (3) to secure literary culture, and (4) to acquire a working knowledge of parliamentary usage.

Article III.—Members.

Any girl between the ages of ten and twenty years, living within the county, may become a member by signing the constitution and paying the annual dues.

Article IV.—Officers.

Section 1. The officers shall be a President, Vice-President, Recording Secretary, Corresponding Secretary, Treasurer, Critic, and a Door-Keeper.

Sec. 2. The officers shall be elected by ballot at the last (annual) meeting of the club each year. They shall take office the first meeting of the ensuing year and continue until their successors are duly elected.

Article V.—Duties of Officers.

Section 1. The duties of the President, Vice-President, Secretary, and Treasurer shall be those which usually appertain to these offices.

Sec. 2. The President shall appoint members to fill any vacancies that may occur by resignation or removal. The Critic shall call attention to mistakes in language, gesture, and general bearing, of those who take part in the formal proceedings of the club; look up and report upon disputed points as to grammar, choice of words, pronunciation, and parliamentary usage. The Door-Keeper shall see that the place of meeting is kept comfortable, tidy, and properly ventilated, and look after the comfort of the members and any invited guests.

Sec. 3. The President, Vice-President, and Recording Secretary shall be the executive and also the program committee of the club.

Article VI.—Duties of Members.

It shall be the duty of the members to attend each meeting of the club and perform every part assigned by the President or by the Program Committee. Absence or non-performance of duty, due to sickness or other unavoidable cause, shall be excused.

Article VII.—Dues.*

Section 1. The annual dues, payable at the opening of each year, shall be: For members under twelve years old, 10c; twelve and under fifteen, 15c; fifteen and under eighteen years, 20c; eighteen years and over, 25c.

*The dues may be uniform if preferred.

Sec. 2. Three months' arrearage in dues will forfeit membership, but the member in arrears may be reinstated by a majority vote of the members present at any regular meeting, and the payment of dues.

Article VIII.—Meetings.

Section 1. The club shall meet on the Saturday
(1st, 2d, 3d or 4th)
in
(Name the several months in which the meetings will be held.)
..... at
(Name of the club headquarters.)

Sec. 2. The hour of meeting shall be fixed by the Program Committee.

Sec. 3. The date or place of meeting may be changed temporarily by vote of the majority of the members present.

Sec. 4. A special meeting may be called at any time by the President upon written request of five members.

Article IX.—Order of Business.

- (1) Call to order.
- (2) Roll call.
- (3) Reading minutes of previous meeting.
- (4) Reports of officers (for annual meeting only).
- (5) Reports of committees.
- (6) Miscellaneous business.
- (7) Appointment of committees.
- (8) Special order of the day.
- (9) Adjournment.

Article X.—By-Laws.

The Club may enact such by-laws, not in conflict with this constitution, as may seem necessary.

Article XI.—Parliamentary Guide.

Robert's Rules of Order.

Article XII.—Amendments.

This constitution may be amended at any regular meeting by a two-thirds vote of the members present, provided notice of the amendment was presented in writing at the previous regular meeting.

The following explanatory forms of score card have been prepared to enable the boys and girls more perfectly to understand the several points of excellence in corn, butter, and bread:

FARMERS' INSTITUTE SCORE CARD FOR CORN.

<i>Description</i>	<i>Standard.</i>	<i>Score.</i>
1. Uniformity of Exhibit, all the ears alike.....	10	_____
2. Shape of Ears, straight, nearly cylindrical.....	10	_____
3. Length of Ears, eight and one-half to ten inches, according to section of the state.....	10	_____
4. Color of Grain and Cob, even, typical, free from mixture	10	_____
5. Tips of Ears, covered with regular deep grains.....	5	_____
6. Butts of Ears, not swelled, not pinched, covered with regular grains	5	_____
7. Kernels, deep, uniform in size, shape and indentation. —(a) 10; (b) 5; (c) 10; see note 7.....	25	_____
8. Seed Condition, ears well matured and germ large and bright	15	_____
9. Proportion of Grain to Cob, at least 86 per cent. of grain for each ear.....	10	_____

Explanatory Notes by A. T. Wiancko, Professor of Agronomy, Purdue University, LaFayette, Indiana.

1. All the ears should be similar in size, shape and color, with rows, shape and indentation of kernels uniform.

2. The ears should be full and strong in the middle portion, whose circumference should be about three-fourths of the length of the ear. The rows of kernels should be straight throughout and not less than 16 nor more than 22 in number.

3. *The length of each ear should be 8½ inches in section 1; 9½ inches in section 2, and 10 inches in sections 3, 4 and 5 of the state. Deficiencies in length should be cut at the rate of 2 points for each inch.

4. White cobs in yellow ears, or red cobs in white ears, or 12 or more crossed grains in a single ear, should disqualify exhibit for premiums or for seed. For each crossed kernel, white in yellow ear, or yellow in white ear, cut the ear two-tenths of a point. If ear or cob is "off color" cut according to shade.

5. The tips of ears should be covered with straight rows of regular kernels of good form. Rounded shallow kernels are objectionable. Cut poor tips one-tenth to one-half point, according to judgment.

6. The rows of kernels should extend in regular order well over the butt end of the cob. Open, expanded, flattened, or tapering butts are objectionable. Cut defective butts one-tenth to one-half point according to judgment.

7. (a) In shape, the kernel should be twice as long as it is broad and of medium size. The edges of the kernels should be nearly straight so as to

*For sectional divisions of the state, see official score card of the Indiana Corn Growers' Association. Apply to the secretary, G. I. Christie, LaFayette, Ind.

leave only a slight crease between rows on the outside of the ear. There should be no space between the tips of the kernels, either on sides or edges.

Shrunk tips and badly rounded crowns should be heavily cut.

(b) The indentation of the kernels should be regular and fairly deep, but not pinched, which would make the edges of the crown sharp or chaffy.

(c) The kernels should be uniform, in size and shape, on each ear and throughout the exhibit.

8. The ears should be firm and sound. The germ should be well developed, fresh and healthy in appearance, indicating strong vitality. One or more dead ears should disqualify exhibit.

9. Each ear should shell at least 86 per cent. of grain, as compared with weight of grain and cob. For each per cent. below 86, cut the exhibit two points.

A copy of this score card will be sent to each School Club, on application to W. C. Latta, LaFayette, Ind.

FARMERS' INSTITUTE SCORE CARD FOR BUTTER.

Description	Standard.	Score.
1. Flavor, rich creamy, slightly but not sharply acid to the taste	45	_____
2. Body, moderately firm with a waxy texture.....	25	_____
3. Color, a bright yellow, resembling that of June butter.	15	_____
4. Salt, best dairy, moderate amount, well distributed, well dissolved	10	_____
5. Market Package, one pound print, standard size preferred, wrapped in parchment paper.....	5	_____

Explanatory Notes by O. F. Hunziker, Professor of Dairying, Purdue University, LaFayette, Indiana.

1. The flavor may be: (a) *weedy*, from weeds in pasture or feed; (b) *mouldy*, from mouldy, sour or fermented feed or from bad silage; (c) *unclean*, from unclean cows, stables or utensils; (d) *stale*, from old milk or cream, from exposure to impure air in kitchen, cellar or stable, or from milk tightly covered while cooling; (e) *fishy*, from unclean and fermented cream or poor quality of salt or impure wash water or storing butter at too high temperature; (f) *oily*, from overheating cream in cans and also from overworking butter; (g) *flat*, from cream not ripened enough, or from washing butter with too cold and too much water or from insufficient salt; (h) *rancid*, from over-ripe cream or starter or from exposure of butter to light, air and high temperature; (i) *bitter*, from frozen milk or cream or from keeping cream too long at too low temperature; (j) *metallic*, from galvanized iron or rusty milk pails. Remark: The foregoing are the most frequent but not the only causes of defective flavors in butter.

2. The body may be: (a) *tallowy*, from overworking at too low temperature; (b) *salvy*, from overworking at too high temperature; (c)

crumbly, from churning and washing too cold and not working enough; (d) *weak*, from not keeping cream cold long enough before churning or from churning at too high temperature; (e) *leaky*, from churning too cold into fine granules and not working enough.

3. The color may be: (a) *too high*, from use of too much butter color; (b) *too light*, from using too little color; (c) *mottled* or *wavy*, from uneven distribution of salt, or from excess of buttermilk and doubtless from other causes not yet satisfactorily demonstrated; (d) *milky*, from excess of buttermilk due to incomplete washing; (e) *specky*, having white specks from over-ripe cream or starter, or from cream or starter not properly strained.

4. Too heavy salting destroys the rich, creamy flavor of butter and tends to give it a "coarse" flavor. Poor, or too much salt, or insufficient working, causes gritty butter. Uneven distribution, or incomplete solution of salt, tends to cause mottled butter. Too little salt causes butter to lack flavor.

5. The standard size of butter print is $4\frac{1}{4}$ inches long, $2\frac{1}{2}$ inches wide, and $2\frac{1}{2}$ inches high and should weigh a full pound. The shape should be perfect. The wrapper should be of clean parchment paper neatly put on and folded.

A copy of this score card will be sent to each School Club, on application to W. C. Latta, LaFayette, Ind.

FARMERS' INSTITUTE SCORE CARD FOR BREAD.

<i>Description</i>	<i>Standard.</i>	<i>Score.</i>
1. Flavor, nutty	35	_____
2. Texture, even, elastic, but breaking readily.....	25	_____
3. Lightness, pores medium, uniform.....	15	_____
4. *Color of Crumb, creamy white.....	5	_____
5. Crust—color, thickness, texture.....	10	_____
6. Size and Shape, medium, symmetrical.....	5	_____
7. Moisture, not dry, not sad.....	5	_____
Total	100	_____

Explanatory Notes by Ivy F. Harner, Professor of Household Economics, Purdue University, LaFayette, Indiana.

Judging Bread—The items in the score card represent the points which figure in scoring bread. Bread to be scored should be 24 hours old and the sample should be taken from the center of the loaf.

1. The **FLAVOR** is best characterized by the word "nutty," meaning rich as opposed to a starchy flat taste. Good flavored bread is free from acidity, and from the odor of yeast.

*For brown bread a uniform shade.

2. TEXTURE refers not only to the coarseness or fineness of the pores, but also to the elasticity of the mass and to the ease with which it breaks.

3. LIGHTNESS is judged by the uniformity of the pores, which should be medium in size, and the weight of the loaf compared to its size. Baker's bread is usually too light.

4. The desirable creamy color of the crumb is an indication of a large per cent. of gluten in the flour and a desirable fermentation during the process of bread making.

5. The crust should be a medium brown, and its texture crisp rather than elastic. A uniform crust is best obtained by baking in a single loaf when the crust is continuous.

6. There is no standard size for a loaf of bread. A rectangular shape is desirable for the best results as the heat permeates the dough in the loaf more uniformly. A rectangular pan capable of holding about one and one-half pounds of dough is a good size. These pans may be obtained at any hardware store.

7. Moisture in bread is a relative condition depending upon baking and age, as well as care after baking.

References: The following bulletins of the United States Department of Agriculture, Washington, D. C., will prove very useful:

No. 67, Office of Experiment Stations, "Studies on bread and bread making."

No. 85, Office of Experiment Stations, "Digestibility and nutritive value of bread."

No. 112, Farmers' Bulletin, "Bread and the principles of bread making."

For Nos. 67 and 85, address Superintendent of Documents, Union Building, Washington, D. C. The price of No. 67 is 10c, and of No. 85, 5c. Send the coin, not stamps. Farmers' Bulletin No. 112 can be obtained free, by addressing Officers of Experiment Stations, Washington, D. C.

A copy of this score card will be sent to each School Club, on application to W. C. Latta, LaFayette, Ind.

For the reasons set forth in the foregoing circular, relative to school clubs, an earnest effort will be made to establish, in the fall and winter of 1908-09, such school clubs in the more progressive counties of the State.

SOME COMPARISONS.

As stated elsewhere the Farmers' Institute season of 1907-08 was the first in which the county associations received no State funds for local expenses. Thrown thus upon their own resources the county chairmen and their co-workers have rallied to the support of the Institute work in a way and with results that are highly gratifying.

The Institute work of 1907-08 surpassed that of the pre-

vious year in both number of meetings and number of sessions held, the excess of meetings being 48 and of sessions 132 for the past season. The aggregate attendance in 1907-1908 is also a little greater than in the previous year.

With a few exceptions, the quality and character of the instruction compared favorably with that of previous years. This is clearly shown by the majority of the official reports of the Institute secretaries.

An earnest effort will be made by the general committee on Institutes to maintain and even improve the quality of instruction given at the Farmers' Institutes. As the chairmen elect more fully understand the provision of the Institute Act of 1907 and as the county associations are getting into line to reap the full benefits of said act, it is believed that the Institute work of 1908-09 will, in both quality and quantity, surpass that of any previous year.

PLANS FOR THE INSTITUTE SEASON OF 1908-09.

The Institute work of next year will be of the same general character as in the past. An effort will be made, (1), to increase the number and efficiency of the Women's Auxiliaries; (2), to effect the organization of a considerable number of boys' and girls' school clubs; (3), to secure more general co-operation of county superintendents of schools and teachers with the local institute associations in providing work at the Farmers' Institutes of real interest and profit to the boys and girls.

In order that all who are interested may know the method of making up the schedule of Institutes for the coming season, we give below the letter of instructions and accompanying blank for advice sent out last February to the chairmen elect for 1908-09.

INSTRUCTIONS TO THE FARMERS' INSTITUTE CHAIRMAN-ELECT FOR 1908-09.

Dear Sir: Although the term of the Institute officers-elect will not begin until April 1st, they should have opportunity before the busy season to express their wishes as to the Farmers' Institutes for the coming year.

After consulting with your associate officers, please fill the enclosed blank and return it to the undersigned not later than March 31st. To aid you in this, I make the following suggestions:

1. Invite the officers of the Institute Association and also of the Woman's Auxiliary to meet you at some central point and convenient date to consider the needs of the work in your county. If a meeting is out of the question, confer by 'phone or mail. It is better to *meet* in order to more fully inform your associate officers.

2. Appoint Institute Vice-Presidents to fill any vacancies, get their consent to act, and invite them as under Number 1.

3. If you have no Woman's Auxiliary, invite interested farmers' wives from different sections of the county, as under Number 1.

4. Read this letter to these officers when they meet.

5. Express *clearly in the blank* the preferences of these officers and workers as to places, dates, and subjects for each Institute.

6. Bear in mind the needs of farmers living remote from places where recent Institutes have been held. Do not neglect good points off railroad.

7. One-day Institutes will permit a wider and more equitable distribution of meetings, but bear in mind that assigned speakers at *one-day* meetings can not remain, as a rule, for night sessions.

8. Select *general* subjects for the assigned speakers, leaving purely *local* subjects for *home* speakers.

9. Remember the needs of the farmers' wives and the boys and girls in your choice of subjects for the assigned speakers.

10. Plan for competitive exhibits by the boys and girls in connection with your Institutes next season. I believe this to be very important. The accompanying circular relative to boys' and girls' clubs suggests how they may prepare for these contests.

11. Do not undertake too much in the way of exhibits, but plan to do well what you do undertake.

12. After agreeing upon plans for next year, announce the same to the County Council and request that money be appropriated therefor in accordance with the Institute Act of 1907. I will send to the new officers the last Institute report containing full text of said act. Old officers already have this report.

Please do not lay this letter aside, or you may forget it. Kindly give it attention at the earliest practicable date and promptly return the blank, after filling it out, that the undersigned may consult it in arranging the Institute schedules for next season.

In case you have a Woman's Auxiliary, I will send the President of same a letter requesting her to be ready to respond when you call the officers together.

Very truly yours,

W. C. LATTA,

Superintendent Farmers' Institutes.

Purdue University, LaFayette, Ind., Feb. 28, 1908.

**THE COUNTY OFFICERS-ELECT FOR 1908-09 WILL PLEASE FILL
OUT THIS BLANK AND RETURN TO W. C. LATTA,
LAFAYETTE, INDIANA, BY MARCH 31, 1908.**

..... County is entitled to the equivalent of days
of State Institute work between November 1, 1908, and March 31, 1909.

Numbered subjects from which to select for assigned speakers:

- | | |
|--------------------------------|--------------------------------|
| (1) The soil. | (19) Live stock feeding. |
| (2) Drainage. | (20) Farm buildings. |
| (3) Manures and fertilizers. | (21) Farm machinery. |
| (4) Grain crops. | (22) Farm fences. |
| (5) Forage crops and pastures. | (23) Farm management. |
| (6) Garden crops. | (24) Tenant farming. |
| (7) Small fruits. | (25) Co-operative farming. |
| (8) Orchard fruits. | (26) The home. |
| (9) Forestry. | (27) Household management. |
| (10) Horses. | (28) Food and its preparation. |
| (11) Cattle. | (29) School improvement. |
| (12) Hogs. | (30) Industrial training. |
| (13) Sheep. | (31) Agricultural education. |
| (14) Poultry. | (32) Boys' and Girls' Clubs. |
| (15) Silos and silage. | (33) Reading courses. |
| (16) Farm dairying. | (34) Rural betterment. |
| (17) Creamery. | (35) Agricultural outlook. |
| (18) Live stock breeding. | (36) The highway. |

Please suggest for each meeting, in the space below, the number of days (not over two), number of speakers (not over two), three or four subjects by number, in order preferred, and month desired.

Place of Meeting.	No. of Days.	No. of Speakers.	Subject of Speakers.	Month.

Do you or will you have a Boys' Club for 1908-09?

Do you or will you have a Girls' Club for 1908-09?

What form of young people's contest will you have next winter—

(a) For boys?

(b) For girls?

Remarks:

Number consulted in filling this blank (1) Institute Officers.....;
(2) Auxiliary Officers.....; (3) Others.....;
Chairman.....; Postoffice.....;
Date of mailing.....; County.....

The advice of the chairmen is thus sought and carefully considered each year in placing the meetings and in assigning speakers. The right is reserved, however, to make such adjustments in arranging the schedule of meetings as the convenience of the speakers, movement of trains, and economy in traveling expenses render desirable.

SCHEDULE OF FARMERS' INSTITUTES FOR THE SEASON OF
1908-1909.

The schedule of meetings for 1908-09, alphabetically arranged by counties with dates and speakers assigned, is as follows:

ADAMS—

Berne, January 4, Burkhart, Mrs. Calvin.
Decatur, January 27-28, Burris, Cantley.

ALLEN—

Monroeville, November 30, Burris.
Nine Mile, December 1, Burris, Mrs. Kline.
Hoagland, January 26, Snow.
Harlan, February 1-2, Professor Latta (1), Miss Berry (2).
Huntertown, February 3, Miss Berry.
Fort Wayne, February 26-27, Freeman (26), Miss Berry (26), Benjamin (27).

BARTHOLOMEW—

Columbus, December 15-16, Burris, Cantley.
Elizabethtown, January 22-23, Mrs. Meredith (22-23), Billingsley (22), Allen (23).

BENTON—

Earl Park, December 9, Burkhart.
Wadena, December 10, Burkhart.
Boswell, December 11-12, Burkhart.
Fowler, December 21-22, Cantley (21-22), Mrs. Calvin (21), Davis (22).
Otterbein, December 31, January 1, Thompson.

BLACKFORD—

Hartford City, February 2-3, Burkhart, Billingsley.

BOONE—

Thorntown, December 5, Crane, Miss Berry.
Terhune, December 9, Miss Berry, Professor Smith.
Lebanon, January 1-2, Anderson (1-2), Billingsley (1), Cochel (2).

BROWN—

Pike's Peak, December 17-18, Billingsley.
Elkinsville, December 19, Billingsley.
Nashville, December 21, J. J. Doan.
Needmore, December 22, J. J. Doan.
Sprunica, December 23, J. J. Doan.

CARROLL—

Bringinghurst, December 10, Cochel, Miss Berry.
 Radnor, December 31, Prigg.
 Flora, January 1-2, Snow (1), Thompson (2).
 Deer Creek, February 8, Billingsley.
 Burlington, February 10, Burkhart.
 Pymont, February 11, Burkhart.

CASS—

Clymers, January 4, Burris.
 New Waverly, January 5, Burris.
 Twelve Mile, January 6, Burris.
 Royal Center, January 7, Burris.
 Walton, February 11, Burris.
 Young America, February 12, Burkhart.
 Logansport, February 17-18, Price (17), Snow (18).

CLARKE—

Marysville, December 17-18, Miss Berry, J. J. Doan.
 Prather, February 26-27, Burkhart, Mrs. Lindley.

CLAY—

Brazil, November 27-28, Martindale (27-28), Mrs. Calvin (27), Professor Latta (28).
 Clay City, December 4-5, Billingsley (4-5), Mrs. Bates (4), Allen (5).

CLINTON—

Pickard, February 1, Davis.
 Middlefork, February 2, Davis.
 Mulberry, February 5, Davis.
 Colfax, February 6, Davis.
 Frankfort, February 12-13, Burris (12-13), Cochel (12), Mrs. Calvin (13).

CRAWFORD—

Bowman, November 9-10, Anderson.
 Jericho, November 11-12, Anderson.
 English, November 27-28, Allen (27), Mrs. Calvin (28).

DAVISS—

Elnora, November 30, December 1, Burkhart.
 Alfordsville, December 3-4, Burkhart.
 Montgomery, December 29, Crane, Professor Hunziker.
 Washington, January 1-2, Miss Berry (1), Professor Christie (2).

DEARBORN—

Mt. Sinai, November 20-21, Mrs. Lindley (20), H. C. Mills (21).
 Chesterville, December 10-11, Billingsley (10), Anderson (11).
 Mt. Tabor, February 17-18, Miss Berry (17), Anderson (18).

DECATUR—

Letts, December 4-5, Prigg, Mrs. Carter.
 Greensburg, December 11-12, Billingsley (11), Anderson (12), Mrs. Calvin (12).

DE KALB—

St. Joe, December 29-30, Thompson (29-30), Professor Troop (29),
Price (30).

Butler Township, January 1, Price, Benjamin.

Corunna, January 2, Price, Benjamin.

DELAWARE—

Selma, January 9, Snow, Billingsley.

Muncie, January 29-30, Billingsley (29), Freeman (29), Mrs. Calvin
(30), Cantley (30).

Eaton, February 5, Miss Berry, Professor Latta.

DUBOIS—

Brooner School House, November 17, Anderson.

Holland, November 19, H. C. Mills.

Huntingburg, December 2-3, Rainbolt, J. J. Doan.

ELKHART—

Goshen, November 24-25, Mrs. Kline (24), Maish (25).

Bristol, December 2, Burris.

Millersburg, December 22, J. W. Mills.

Middlebury, January 6, Burkhart.

Nappanee, January 9, Burkhart.

Elkhart, February 15-16, Burris (15), Cantley (16).

FAYETTE—

Everton, January 1, Professor Christie.

Bentonville, January 19, Thompson.

Connersville, February 19-20, Anderson (19-20), Miss Berry (19), Vog-
ler (20).

FLOYD—

Horticultural Hall, November 10-11, Heacock (10), Martindale (11).

Grant Line, November 12-13, Martindale (12), Mrs. Carter (13).

FOUNTAIN—

Attica, December 22-23, Miss Berry (22-23), Prof. Christie (22), Prof.
Latta (23).

Newtown, January 2, Miss Berry, Davis.

Kingman, February 11, Cochel, Cantley.

FRANKLIN—

Metamora, December 10, Anderson.

Laurel, December 11, Woodbury.

Mixersville, January 28, Prigg.

Fairfield, January 29, Prigg.

New Trenton, February 4, Cantley.

Mt. Carmel, February 18, Miss Berry.

Brookville, February 19-20, Mrs. Meredith.

FULTON—

Rochester, January 20-21, Burkhart, Snow.

Akron, February 3-4, J. J. Doan.

Kewanna, February 5-6, J. J. Doan.

GIBSON—

Haubstadt, November 13, Martindale, Anderson.
 Mackey, November 14, Martindale, Anderson.
 Owensville, January 22-23, Cantley, McHenry.

GRANT—

Swayzee, December 18-19, Mrs. Lindley (18), Burkhart (19).
 Marion, January 6-7, Cantley (6-7), Mrs. Meredith (6), Miss
 Berry (7).
 Fairmount, February 4-5, Meads (4), Mrs. Kline (5).

GREENE—

Worthington, December 11-12, Miss Berry, J. J. Doan.
 Lyons, January 2, Crane, Billingsley.
 Bloomfield, February 8-9, Burkhart (8-9), Woodbury (8), Miss
 Berry (9).

HAMILTON—

Sheridan, December 15-16, Davis (16), Billingsley (15).
 Cicero, January 1-2, Burris.
 Noblesville, January 29-30, Cantley (29), Miss Berry (30).
 Carmel, February 5-6, Burkhart.

HANCOCK—

Eden, February 4, Billingsley, Davis.
 Greenfield, February 5-6, Cantley (5-6), Prigg (5), Miss Berry (6).

HARRISON—

Crandall, January 21, Martindale.
 New Middletown, January 22, Martindale.
 Valley City, January 23, Martindale.
 Palmyra, January 25, Billingsley.
 Corydon, January 29-30, Martindale (29-30), Heacock (29), Mrs. Lind-
 ley (30).

HENDRICKS—

Avon, January 2, Snow.
 Pittsboro, January 8-9, Burris.
 Danville, January 27-28, Burkhart (27-28), Mrs. Lindley (28).
 Clayton, February 5-6, Billingsley.

HENRY—

Shirley, January 2, Professor Latta.
 Newcastle, January 8-9, Davis (8-9), Snow (8), Mrs. Meeks (9).
 Middletown, January 18, Thompson.
 Lewisville, February 1, Billingsley.
 Mooreland, February 3, Davis.

HOWARD—

Russiaville, December 24, Miss Berry, J. J. Doan.
 Kokomo, January 29-30, Miss Berry (29), Prigg (30).
 Greentown, February 4, Burkhart, Miss Berry.

HUNTINGTON—

Bippus, December 3, Burris.
 Andrews, December 14, Burkhart.
 Roanoke, December 15, Burkhart.
 Union Center, December 16, Burkhart.
 Markle, December 17, Burkhart.
 Warren, December 18, Burkhart.
 Mt. Etna, December 22, Billingsley.
 Huntington, Huntington, January 9, Professor Latta.

JACKSON—

Uniontown, December 1, Billingsley, Miss Berry,
 Brownstown, December 2, Billingsley, Miss Berry.
 Kurtz, December 19, J. J. Doan, Miss Berry.
 Seymour, January 28-29, Benjamin (28-29), Heacock (28), Mrs. Lind-
 ley (29).

JASPER—

Rensselaer, December 7-8, Burkhart (7-8), Woods (7), Miss Berry (8).
 Fair Oaks, December 11, Cantley.
 Parr, December 12, Professor Smith.
 Wheatfield, December 16-17, Burnside.
 Remington, December 18-19, Mrs. Kline (18), Professor Skinner (19).

JAY—

Bryant, January 2, Professor Hunziker.
 Corydon, January 9, J. J. Doan.
 Salamonia, February 5-6, Mrs. Meeks (5), Allen (6).
 Pennville, February 19-20, Price (19), Allen (20).
 Portland, February 26-27, Mrs. Meredith (26), J. J. Doan (27).

JEFFERSON—

Saluda Township, December 4-5, J. J. Doan, Mrs. Lindley.
 Canaan, February 25-26, Burris, Woodbury.

JENNINGS—

Vernon, November 20-21, Billingsley (20), Woodbury (20), Allen (21),
 Mrs. Lindley (21).
 Paris Crossing, January 20, Martindale, Mace.
 San Jacinto, February 3, Cantley, Mace.

JOHNSON—

Trafalgar, December 3, Billingsley.
 Greenwood, January 9, H. C. Mills.
 Franklin, February 5-6, Vogler (5-6), Professor Smith (5), Fouts (6).

KNOX—

Freelandville, December 14-15, J. J. Doan (14), Maurer (15).
 Fritchton, December 15-16, J. J. Doan, Miss Berry.
 Oaktown, December 29-30, Miss Berry (29-30), McHenry (29), Prof.
 Christie (30).

KOSCIUSKO—

North Webster, December 7-8, Thompson.

Warsaw, January 8-9, Freeman (8), Benjamin (8), Allen (9), Miss Berry (9).

Mentone, February 3, Meads, J. W. Mills.

Sydney, February 25, Benjamin, Freeman.

LAGRANGE—

Lagrange, January 7-8, Burkhart (7-8), Miss Berry (8).

Shipshewana, February 16, Burris.

Lima, February 17, Burris.

Wolcottville, February 18, Burris.

South Milford, February 19, Burris.

Topeka, February 20, Burris.

LAKE—

Hobart, January 7, Thompson.

Leroy, January 9, Crane.

Crown Point, January 25-26, Snow (25), Miss Berry (26).

West Creek, February 9, Burris.

Shelby, February 8, Burris.

Merrillville, February 10, Burris.

LAPORTE—

Rolling Prairie, January 7-8, Billingsley.

Laporte, February 19-20, Martindale (19-20), Prigg (19), Prof. Latta (20).

Wanatah, February 23-24, Benjamin.

Westville, February 25-26, Cantley.

LAWRENCE—

Mitchell, November 18-19, Martindale, Anderson.

Bryantsville, February 12, J. J. Doan.

Williams, February 16, Anderson.

Heltonville, February 17, Anderson.

Stonington, February 23, Burris.

MADISON—

Summittville, December 19, Professor Troop.

Pendleton, January 8-9, Mrs. Meeks (8), Prigg (9).

Elwood, January 29, Burris, Professor Troop.

Anderson, February 17-18, Snow (17), J. J. Doan (18).

Alexandria February 27, Prigg.

MARION—

Bridgeport, February 3-4, Anderson.

Southport, February 5-6, Anderson (5), Professor Goss (6).

New Augusta, February 10-11, J. J. Doan (10), Shoemaker (11).

Lawrence, February 12-13, Shoemaker (12), Burkhart (13).

MARSHALL—

Plymouth, December 30-31, Burris (30-31), Prof. Troop (30), Miss Berry (31).

Bremen, January 6, Miss Berry, Thompson.

Culver, February 23, Cantley, Price.

MARTIN—

Loogootee, December 1-2, Crane (1), Burkhart (2).
 Trinity Springs, February 19, Burkhart, Heacock.
 Burns City, February 20, Burkhart, Heacock.

MIAMI—

Peru, December 29-30, Prigg (29-30), J. W. Mills (29), Mrs. Calvin (30).
 Macy, January 18-19, Burkhart, Snow.

MONROE—

Reeves School House, December 8-9, Burris, Mrs. Bates.
 Bloomington, December 18-19, Anderson, Heacock.

MONTGOMERY—

Brown's Valley, December 17, Thompson.
 Waveland, December 26, Miss Berry, Allen.
 Darlington, December 30, Cochel.
 Newmarket, December 31, Benjamin, Mrs. Kline.
 Ladoga, February 24, Anderson.
 Wingate, February 25-26, Anderson.
 Crawfordsville, February 27, Mrs. Calvin.

MORGAN—

Paragon, January 4-5, Prigg, Davis.
 Mooresville, January 26-27, Billingsley (26-27), Cantley (26), Professor Latta (27).

NEWTON—

Kentland, January 6-7, J. J. Doan, Prigg.
 Morocco, February 17-18, Cantley, Martindale.

NOBLE—

LA OTTO, January 19, Burris.
 Wolf Lake, January 20, Burris.
 Cromwell, January 21, Miss Berry, Burris.
 Cosperville, January 22, Miss Berry, Burris.
 Albion, January 23, Miss Berry, Burris.

OHIO—

Pleasant Ridge Church, December 28-29, Burkhart, W. S. Smith.

ORANGE—

_____, February 17, Burkhart, Heacock.
 _____, February 18, Heacock, Burkhart.
 _____, February 24-25, Heacock, Davis.

OWEN—

Freedom, December 9-10, Thompson.
 Quincy, December 11-12, Thompson.
 Spencer, December 16-17, Anderson (16-17), Crane (16), Mrs. Carter (17).

PARKE—

Rockville, January 1-2, Prigg (1), Cochel (1), Mrs. Calvin (2), J. J. Doan (2).
 Bloomington, February 16, Miss Berry, Burkhart.
 Bridgeton, February 26-27, Martindale.

PERRY—

Tell City, November 10-11, Mrs. Lindley (10-11), Prof. Christie (10),
Heacock (11).

Bristow, November 12-13, Heacock, Mrs. Lindley.

PIKE—

Winslow, December 3-4, Miss Berry (3), McHenry (4).

Pleasantville, January 20, Cantley.

Union, January 21, Cantley.

Stendal, January 22, Heacock.

Otwell, January 23, Billingsley.

PORTER—

Chesterton, January 6, Billingsley, Price.

Valparaiso, January 8-9, Woods (8-9), Thompson (8), Professor
Troop (9).

Hebron, February 22, Benjamin, Cantley.

POSEY—

New Harmony, January 18-19, Mrs. Lindley (18-19), Anderson (18),
Professor Christie (19).

Wadesville, February 22-23, Burkhart, McHenry.

PULASKI—

Star City, January 4-5, Mertz (4), Woods (4), Cochel (5), Wyatt (5).

Winamac, January 22-23, Burkhart, Snow.

PUTNAM—

Cloverdale, December 28-29, Crane (28), Davis (29).

Filmore, January 6, Anderson.

Roachdale, January 7, Anderson.

Russellville, January 8-9, Anderson.

Greencastle, January 29-30, Professor Christie (29), Heacock (30).

RANDOLPH—

Modoc, December 14, Thompson.

Lynn, December 15, Thompson.

Parker, December 16, Thompson.

Ridgeville, December 17-18, Burris.

Union City, December 19, Burris.

Winchester, January 28-29, J. J. Doan (28), Mrs. Meredith (29).

RIPLEY—

Sunman, November 20-21, Martindale (20-21), H. C. Mills (20), Bil-
lingsley (21).

Versailles, January 18-19, Martindale, Cantley.

RUSH—

Carthage, February 15, Snow.

Manilla, February 16, Snow.

Milroy, February 17, Benjamin.

Arlington, February 18, Benjamin.

Rushville, February 19-20, Benjamin (19-20), Snow (19), Miss Berry
(20).

ST. JOE—

Wyatt, January 5, Woods, Miss Berry.
 North Liberty, January 26-27, Martindale (26), Miss Berry (27).
 New Carlisle, February 2, J. J. Doan.
 Walkerton, February 10-11, Billingsley (10), Miss Berry (11).
 Lakeville, February 24, Cantley.

SCOTT—

Leota, December 18, Woodbury.
 Scottsburg, January 27-28, Mrs. Lindley (27), Martindale (28).
 Lexington, February 24, Burris.

SHELBY—

Flat Rock, January 26, Burkhart, Thompson.
 Morristown, January 27, Vogler, Martindale.
 Shelbyville, January 29-30, Burkhart, Thompson.

SPENCER—

Newtonville, November 30, Anderson, J. J. Doan.
 Gentryville, December 1, Anderson, J. J. Doan.
 Rockport, December 11-12, Heacock (11-12), Davis (11), Mrs. Lindley (12).

STARKE—

Aldine, January 25-26, Martindale (25), Mertz (26).
 Grovertown, January 27-28, Mertz (27), Miss Berry (28).
 Knox, January 29-30, Woods (29), Burris (30).

STEUBEN—

Angola, January 20-21, J. W. Mills (20-21), Meads (21).
 Orland, January 25, Burris.
 Salem, January 26, Burris.
 Hamilton, February 1, J. J. Doan.

SULLIVAN—

Pleasantville, January 6-7, Davis (6-7), McHenry (6), Woodbury (7).
 Carlisle, January 28-29, Mertz, McHenry.

SWITZERLAND—

Moorefield, November 20-21, Anderson.
 Patriot, December 30-31, Burkhart.
 East Enterprise, February 15-16, Benjamin.

TIPPECANOE—

Monitor, December 19, Thompson.
 Klondike, January 2, Professor Smith.
 Pleasant Grove, January 4, Cantley.
 Odell, January 5, Cantley.
 Pleasant Hill Church, February 4, Burris.
 West Point, February 5, Burris.
 Montmorenci, February 6, Burris.
 Romney, February 19, Cantley.

ANNUAL CONFERENCE OF FARMERS' INSTITUTE WORKERS.

The third Normal Institute for speakers was held at Purdue University, October 13-14, 1908. This was immediately followed by the eleventh annual conference of Farmers' Institute Workers, October 15-16, 1908. The programs of these meetings are given below:

PROGRAM OF NORMAL INSTITUTE.

9:45 A. M., TUESDAY, OCTOBER 13TH, GENERAL SESSION.

A. G. Burkhardt, Tipton, Presiding.

Opening Remarks,

Professor W. C. Latta, Superintendent Farmers' Institutes

Theme: The Qualifications of the successful Farmers' Institute Instructor:

(a) Up-to-date Knowledge of his Business,

Dr. W. E. Stone, President Purdue University

(b) Successful Experience, past and present,

Prof. J. H. Skinner, Dean School of Agriculture

(c) Kindling Enthusiasm and Conscientious Service,

Prof. G. I. Christie, Dep't of College and Station Extension

(d) Discernment, Courtesy and Tact,

Dr. Stanley Coulter, Dean School of Science

(e) Round Table on the Above.....Conducted by Professor Latta

2 P. M., TUESDAY, SECTIONAL ROUND TABLES.

First Section—Soils, Crops and Live Stock, Room 104:

(a) Soils,

Conducted by Mr. S. D. Conner, Associate Chemist Exp't. Station.

(b) Types of Butcher's Stock.....Conducted by Dean Skinner

Second Section—Horticulture and Gardening, Room 103:

(a) Site and Location in Relation to Fruit Growing,

Conducted by James Troop, Professor of Horticulture

(b) Fruits and Vegetables for the Family,

Conducted by Mr. C. G. Woodbury, Associate Horticulturist
Exp't. Station.

Third Section—Dairying, Room 117:

(a) The Farm Dairy as it is and as it should be,

Conducted by Mr. H. C. Mills, Ass't. Dairy Extension Work.

(b) What the General Farmer should know about Cows,

Conducted by O. F. Hunziker, Professor of Dairying

(c) Conditions Essential to making first-class Butter,

Conducted by Mr. J. D. Jarvis, Instructor in Dairying

Fourth Section—Household Economics, Room 206:

- (a) Message to actual Home Makers,
Conducted by Mrs. C. N. Lindley, Salem
- (b) Message to Prospective Home Makers,
Conducted by Mrs. Henrietta W. Calvin, Professor of Household Economics.

7:30 P. M., TUESDAY, GENERAL SESSION, ROOM 209.

J. M. Cantley, Logansport, Presiding.

Illustrated Lecture: Cement, Cement Making, and the Uses of Cement on the Farm:

W. K. Hatt, Professor of Civil Engineering
Questions and General Discussion.

9:00 A. M., WEDNESDAY, OCTOBER 14TH, SECTIONAL ROUND TABLES.

First Section—Soils, Crops and Live Stock, Room 104:

- (a) Forage Crops,
Conducted by M. L. Fisher, Assistant Professor of Agronomy
- (b) Corn.....Conducted by A. T. Wiancko, Professor of Agronomy
- (c) Feeding Problems,
Conducted by Prof. W. W. Smith, Ass't. Professor of Animal Husbandry.

Second Section—Horticulture and Gardening, Room 103:

- (a) Indiana as a Fruit State.....Conducted by Professor Troop
- (b) How Encourage Horticulture and Gardening,
Conducted by Mr. Woodbury
- (c) Sprays and Spraying, a demonstration,
Conducted by Mr. J. G. Boyle, Assistant in Horticulture

Third Section—Dairying, Room 117:

- (a) The Breeding and Feeding of the Dairy Cow,
Conducted by W. W. Smith, Assistant Professor of Animal Husbandry.
- (b) Sanitation in the Farm Dairy,
Conducted by Dr. R. A. Craig, Professor of Veterinary Science
- (c) Up-to-date Methods in Dairying,
Conducted by Professor Hunziker

Fourth Section—Household Economics, Room 206:

- (a) Household Management,
Conducted by Mrs. V. C. Meredith, Cambridge City
- (b) Home Sanitation,
Conducted by Miss Ethel E. Berry, Jewell City, Kansas
- (c) Household Conveniences.....Conducted by Professor Calvin

2:00 P. M., WEDNESDAY, GENERAL SESSION.

Mrs. C. N. Lindley, Salem, Presiding.

Theme: The Instructor's Message:

- (a) Its Range.....Professor Christie
 - (b) Its Preparation.....Mr. Woodbury
 - (c) Its Presentation.....Professor Christie
 - (d) Its discussion by audience.....Professor Fisher
 - (e) Round Table on the Above.....Conducted by Professor Latta
- 5:00 p. m., Assignment to Lodging Places, Professor Troop.

7:30 P. M., WEDNESDAY, LECTURE ROOM, ELECTRICAL BUILDING.

A. F. Strain, Princeton, Presiding.

Lecture, Electricity on the Farm:

With laboratory demonstration of how to protect buildings and live stock from lightning,

H. T. Plumb, Associate Professor of Electrical Engineering
Questions and General Discussion.

PROGRAM OF CONFERENCE.

9:30 A. M., THURSDAY, OCTOBER 15TH, GENERAL SESSION.

H. M. Stoops, Brookville, Presiding.

Prayer.....Rev. D. Tillotson, Pastor Trinity M. E. Church, LaFayette
Greeting.....President Stone

Theme: Duties and Needs of the County Chairman:

- (a) Their duties in relation to:
 - (1) The State Superintendent.....Professor Latta
 - (2) The Institute Speakers.....D. F. Maish, Frankfort
 - (3) The Audience.....A. J. Logan, Warsaw
- (b) Their Needs—Round Table,

Conducted by C. B. Benjamin, Crown Point

11:30 a. m., Assignment to Lodging Places, Professor Troop.

1:00 P. M., THURSDAY, TOUR OF INSPECTION.

Conducted by Professor Christie.

3:00 p. m., Thursday, Sectional Meetings.

- (a) For the Men.....A. W. Peter, Mulberry, Presiding
- What the Farmers' Institute Chairman Should Expect of
- (1) Assigned Speakers.....J. H. Barrett, Greenfield
 - (2) Local Co-Workers.....Omer Summers, Huntington
 - (3) The Places where Institutes are held,
- C. J. Whistler, LaFayette
- (4) Round Table on the Above.....Conducted by Professor Latta

- (b) For the Women. Room 206. . . . Mrs. J. W. Mills, Lagrange, Presiding
 The Women's Auxiliaries:
 (1) How to organize and finance them. Professor Latta
 (2) How to conduct them. Professor Calvin
 (3) Round Table on the Above. Conducted by Miss Berry
-

7:30 P. M., THURSDAY, GENERAL SESSION.

Mrs. Benjamin Brown, Covington, Presiding.

Music. Purdue Girls' Glee Club
 Prayer. Professor C. A. Waldo, Head of Dept. of Mathematics
 Music. Glee Club
 The Education of Women for their Profession. Professor Calvin
 Opportunities for Farmers' Daughters. Miss Berry
 Our Country Schools. George L. Roberts, Professor of Industrial Education
 Questions and General Discussion.

9:00 A. M., FRIDAY, OCTOBER 16TH, GENERAL SESSION.

C. L. Cates, Greentown, Presiding.

Prayer. Rev. L. S. Smith, Pastor St. Paul's M. E. Church, LaFayette
 Theme: The Relation of Purdue University and the Experiment Station
 to the Farmers:
 (a) The University. President Stone
 (b) The School of Agriculture. Dean Skinner
 (c) The Experiment Station,
 Professor Arthur Goss, Director Experiment Station
 Round Table: How the Farmers and Purdue can be in the highest
 Degree mutually Helpful. Conducted by Professor Latta

2:00 P. M., FRIDAY, GENERAL SESSION.

Captain Ellis House, Bicknell, Presiding.

Theme: How to Promote and Finance the Farmers' Institute Work:
 (a) Young People's Clubs and Contests; How to Organize and Con-
 duct them. Professor Christie
 (b) Raising Funds for the Work;
 (1) The Method prescribed by the State Law,
 President Stone
 (2) Other Methods. E. G. Small, Laporte
 Round Table on the Above. Conducted by Professor Latta
 Adjournment.

Purpose of the Normal Institute.—The Normal Institute is designed especially for the assigned speakers. Other speakers as well as the Farmers' Institute Chairmen and the Presidents of the Women's Auxiliaries are invited to attend any or all the sessions.

All Chairmen and Lady Presidents are *specially invited* to attend the closing session of the Normal Institute on Wednesday evening.

Purpose of the Conference.—The purpose of the conference is (1) to instruct the Chairmen and Lady Presidents as to the duties of presiding officers, speakers, fellow officers and committees; (2) to aid the County Associations in organizing and conducting Boys' and Girls' School Clubs and Contests; (3) to devise the best ways of meeting the local expenses of the Farmers' Institute work; (4) to give Institute officers and assigned speakers opportunity to get acquainted and confer about the Winter Institutes; (5) to suggest how Farmers' Institutes may promote the improvement of the rural schools.

Who are Expected to Attend.—Each speaker who is assigned three or more weeks of Institute work in the printed schedule of Institutes is expected to attend all the sessions of *both the Normal Institute and the Conference*. Other assigned speakers will also be invited to attend throughout.

Each Chairman of the County Farmers' Institute Association and each President of a County Women's Auxiliary is expected to attend *all the sessions of the Conference*, October 15-16. Each delegate is urged to be present *promptly ON TIME*.

Regular railway rates will be charged. Delegates will please travel by the most direct routes and the least expensive lines. From competing points some reduction in rates can be secured by purchasing through round-trip tickets. This is notably true in the case of competing steam and interurban railway lines. Those living near small railway stations should see ticket agents at least a week in advance, that they may have time to procure the proper ticket forms.

Hotels, Restaurants and Lodgings.—LaFayette has ample hotel accommodations at prices ranging from one to three dollars per day. Some hotels furnish rooms and meals separately at 25 to 50 cents each. Numerous restaurants in LaFayette and West LaFayette furnish meals and business lunches at 25 and 15 cents.

Private lodgings in West LaFayette will be engaged for all who request the same not later than October 10th.

Concerning Traveling Expenses of Delegates.—The railroad fare (1) of each County Farmers' Institute Chairman or his substitute, (2) of each President of an active County Women's Auxiliary or her substitute, and (3) of each speaker assigned work in the printed schedule of winter meetings, who attends the Conference, will be paid from the State fund.

Owing to the large number invited to attend the Conference and the full schedule of meetings arranged for the coming year, the County Chairmen and the Lady Presidents or their accredited substitutes will charge their other expenses to their respective local Associations.

Purdue University Calendar.—Short Course for Experienced Creamery Butter-Makers, December 7-18, 1908, provided a sufficient number apply for same.

Farmers' Short Course, January 11-16, 1909.

Winter Course in Agriculture will begin January 18, 1909, and *continue eight weeks*.

The State Dairy Association will meet at Purdue University January 6-7, 1909.

Agricultural Scholarships.—Each County Farmers' Institute Association is authorized to elect two persons to Annual Free Scholarships in the School of Agriculture. Each County Women's Auxiliary may elect two young women to such scholarships.

For program or further information address PROFESSOR W. C. LATTA, LaFayette, Indiana.

Eighty-five counties were represented at the conference by the chairmen of the Institute Associations, and the presidents of the Women's Auxiliaries, or their substitutes. The counties not represented are Fulton, Monroe, Newton, Noble, Ohio, Pulaski and White.

Seventy-four counties were represented by the chairmen or their substitutes and thirty-one counties by presidents of the Women's Auxiliaries or their substitutes. The thirty-one counties whose Women's Auxiliaries were represented at the conference are: Adams, Allen, Bartholomew, Blackford, Boone, Cass, Clay, Clinton, Elkhart, Fayette, Fountain, Franklin, Grant, Hancock, Howard, Jasper, Jennings, Kosciusko, Lagrange, Laporte, Montgomery, Morgan, Perry, Pike, Posey, Putnam, Randolph, Rush, Tippecanoe, Vanderburgh and Whitley.

The "Round Table" feature of the programs, introduced this year, proved to be both pleasing and profitable. It is believed that the several discussions brought out clearly the qualifications, rights, duties, and responsibilities of the assigned speakers, chairmen and presidents of the Women's Auxiliaries, and that, as a result, the Institute workers will be able to co-operate more intelligently and effectively in the future.

The Interest manifested in the discussion of the subject, "Our Country Schools," indicated a growing sentiment in favor of rural school improvement. Elementary agriculture is being taught to some extent even in the one-room schools. In a few cases there is also a little elementary instruction in Domestic Science.

The interest in the discussion of the subject "Young People's Clubs and Contests" was marked and very encouraging. The next general advance in the Farmers' In-

stitute work will undoubtedly be in the way of interesting and enlisting the boys and girls of the farm in an effort to attain excellence in the production of agricultural and household products. The young people's contests are proving an excellent means to this end, and it is, therefore, highly gratifying that they are steadily growing in favor.

To be of the greatest value, these contests should be prepared for in boys' and Girls' School Clubs under the supervision of the County Superintendent of Schools and his corps of teachers. The premiums to be awarded in these contests should also be of real utility and educational value.

ACKNOWLEDGMENTS.

In behalf of the general committee on Farmers' Institutes, the undersigned begs to express sincere appreciation of (1) the many courtesies of the press in giving publicity to the Farmers' Institute work, (2) the cordial cooperation of speakers and local officers, and (3) the valuable gratuitous services of members of the faculty of Purdue University and of the Experiment Station staff.

W. C. LATTA,

Superintendent Farmers' Institutes.

Purdue University, LaFayette, Ind.,

November 3, 1908.

The Indiana State School for the Deaf

SIXTY-FIFTH ANNUAL REPORT

OF THE

TRUSTEES AND THE
SUPERINTENDENT

FOR THE

FISCAL YEAR ENDING SEPTEMBER 30, 1908

To the Governor

INDIANAPOLIS :
WM. B. BURFORD, CONTRACTOR FOR STATE PRINTING AND BINDING
1909

THE STATE OF INDIANA,

EXECUTIVE DEPARTMENT,

January 5, 1909.

Received by the Governor, examined and referred to the Auditor of State for verification of the financial statement.

OFFICE OF AUDITOR OF STATE,

INDIANAPOLIS, January 11, 1909.

The within report, so far as the same relates to moneys drawn from the State Treasury, has been examined and found correct.

JOHN C. BILLHEIMER,

Auditor of State.

January 12, 1909.

Returned by the Auditor of State, with above certificate, and transmitted to Secretary of State for publication, upon the order of the Board of Commissioners of Public Printing and Binding.

MARK THISTLETHWAITE,

Secretary to the Governor.

Filed in the office of the Secretary of State of the State of Indiana, January 12, 1909.

FRED A. SIMS,

Secretary of State.

Received the within report and delivered to the printer January 12, 1909.

E. O. THOMPSON,

Assistant Clerk Printing Board.

LETTER OF TRANSMITTAL.

TERM CALENDAR FOR 1908-1909.

Annual session begins September 23.

Annual session ends June 9.

First term ends November 30.

Second term ends January 31.

Third term ends June 5.

Grade days—December 1, February 1; second and third terms begin.

Mid-year examinations (written) begin January 18.

Final examinations (written) begin May 19.

Graduation exercises—June 9.

Departure for home—June 10.

Holidays for Pupils.

November 26—Thanksgiving Day, Thursday.

December 25-26—Christmas, Friday, Saturday.

January 1—New Year, Friday.

February 22—Washington's Birthday, Monday.

May 30—Decoration Day, Sunday.

June 8—Lawn Social, Tuesday.

June 9—Graduation exercises, Wednesday.

June 10—Departure for home, Thursday.

LECTURE COURSE, 1908-1909.

October 10—

Albert Berg, "Noted Events of the Summer."

October 24—

Henry Bierhaus, "The Election of President and Congress."

November 14—

N. Field Morrow, "The Sun, Moon and Stars."

December 19—

August Jutt, "The National Parks."

January 30—

Sidney J. Vail, "The Search for the North Pole."

February 20—

Utten E. Read, "Aerial Navigation."

March 27—

Orson Archibald, "Photography in the West."

April 24—

William H. DeMotte, "The Outlook in Life."

May 29—

Albert Berg, "Noted Events of the Year."

LITERARY SOCIETIES, ETC.

The literary societies will meet during the year as follows:

Girls' Literary Society—November 7, March 20.

Johnson Literary Society (Boys')—December 12, April 17.

Joint Celebrations—January 16, May 15.

Practice Nights—Alternate Fridays.

Pupils' Parties, etc.

November 26—

Thanksgiving social.

December 25—

Christmas celebration and party.

January 1—

New Year social.

February 13—

Valentine masquerade party.

June 9—

Lawn social and supper.

Holidays for Pupils.

November 26—

Thanksgiving Day.

December 25-26—

Christmas.

January 1—

New Year.

February 22—

Washington's Birthday.

May 30—

Decoration Day.

June 8—

Lawn party.

On Thanksgiving, Christmas, New Year, Washington's Birthday and Decoration Day holidays, school and work for pupils will be suspended the entire day, and the usual exercises incident to the times will be observed.

REPORT OF BOARD OF TRUSTEES.

To the HON. J. FRANK HANLY, Governor of Indiana:

Sir—The Board of Trustees of the Indiana State School for the Deaf submits for your consideration and action the following report for the fiscal year ending September 30, 1908:

The high standard of the school has been maintained as well as could be in all things and along all lines during the year. Officers and teachers have been faithful to their respective trusts, earnestly striving to accomplish the good expected of them; and the pupils generally have diligently applied themselves to their various duties and studies. We feel, however, that the limit of satisfactory progress has been reached in our present location, with our present environment; and are fully conscious of the fact that in educational work non-progression is the starting point of retrogression.

We confidently look forward to better things in our new school in Forty-second street when fully completed and occupied, and earnestly hope that prompt and generous aid will be extended by the coming General Assembly with that end in view at an early date.

The present buildings are old, in great need of repair, and wholly inadequate for the needs of the school in every way. The school-house, although containing thirty-one rooms, is too small for present attendance, and the shops are dilapidated, contracted and ill-adapted for the right sort of industrial training. As an educational institution we are constricted in our scope, and many changes and improvements contemplated by the superintendent along literary and industrial lines, especially the latter, cannot be put into successful operation with present conditions.

Because of existing conditions the enrollment each scholastic year is held down to about 300. With enlarged capacity, such as provided for in the new school, vigorous effort will be made to bring into the school all of Indiana's youth who are too deaf to be properly educated in the common schools. If the present school laws of the State concerning truancy and non-attendance do not apply to the deaf, appeal will be made for a law which will apply to them as now prevails in other states. This means a very much larger

school than we now have, one with a probable attendance within the next five years of five hundred or more pupils.

Referring to the building of the new institution north of the city it is to be reported that satisfactory progress has been made during the past year. At the present time the schoolhouse, the dining hall and kitchen-bakery buildings, the power house and tunnels, three buildings of the boys' dormitory group and three of the girls' dormitory group, all that are possible of erection under existing appropriation, are rapidly nearing completion. The school, however, cannot be removed from its present site to the new location until further appropriations are made and other necessary buildings added to the group. The superintendent refers to this matter in his report to this board and your attention is called thereto. A report of the Building Commission, consisting of yourself, the Attorney-General and this Board of Trustees, is also on file in your office, wherein detailed information is given as to appropriations, expenditures, progress and further needs.

The total receipts of the old institution during the year have amounted to \$74,500.00 (maintenance \$70,000.00, industries \$4,500.00) and the disbursements to \$74,139.04 (maintenance \$69,999.99, industries \$4,139.05), thus leaving unexpended and for return to the general fund \$360.96 (maintenance 1 cent, industries \$360.95). There was no excess allowance for a daily average over 325 pupils each month, as allowed by law, as this number was not reached because of the limit placed upon attendance, it being the intention of the board to hold the enrollment of pupils at about 300 as long as we are in these old buildings.

To this unexpended balance of \$360.96 above referred to there should be added \$850.32, which was paid out of our maintenance fund for clothing for pupils and which will be repaid the State Treasury by counties whence the pupils come; and the further sum of \$789.90 paid into the State Treasury as cash earnings, thus making a total credit for the institution of \$2,001.18, as against the total appropriation of \$74,500.00 (maintenance \$70,000.00, industries \$4,500.00).

During the year 81 of the 92 counties in the State have been represented by pupils, the total enrollment being 341. Of this entire number 14 only were discharged by graduation or otherwise, thus leaving entitled to enrollment and return 327; but of this number 39 are still absent at the close of the year (September 30). In this connection it is to be stated that the number entitled to the benefits of the school is much larger than the number shown at the end of any one year, for such a statement refers only to those who

have actually been in attendance at some time during the year, those of preceding years not discharged, although entitled to readmission, being dropped from consideration—and these average about thirty yearly. This is deplorable of course, but on account of the crowded condition of the present school and its lack of proper facilities, appropriation, etc., discharges are more freely made than would otherwise prevail, no effort is made to cause absent ones to return, and no inquiry or search made for pupils who have never been in school. In the new school this policy will be reversed in all ways, and the deaf children of the State given that which is both their privilege and right—an education.

During the past summer the Indiana Association of the Deaf met at the School in seventh triennial reunion. Representatives were in attendance from all parts of the State. Their appearance and conversation, their occupations, home life and future prospects, their apparent material prosperity, and their general happiness, all combined to indicate the good results of their former school life and training along mental, moral and industrial lines. As wage-earning, honorable citizens of our State they stand themselves the most convincing argument for adequate and liberal education of the deaf. The resolutions adopted by the association are given in a subsequent part of this report.

This school has been represented at various professional gatherings during the year—National Educational Association; National Society for Promotion of Industrial Education; National Convention of American Instructors of the Deaf—in all of which Indiana has taken an active part. Attendance upon such meetings as these are productive of great good to the school, insuring live and up-to-date administration.

The needs of the school for the coming biennial term, October 1, 1909-September 30, 1911, are fully explained in the report of the superintendent, and we fully approve of same.

For detailed information concerning receipts and disbursements for maintenance and industries, concerning expenditures for clothing, receipts of cash earnings, farm and garden products, per capita expense, and for various other matters, fiscal and scholastic, your attention is called to statements and exhibits in the superintendent's report hereto attached and made part of this report.

Respectfully submitted,

HENRY B. BROWN,
ELE STANSBURY,
WILLIAM W. ROSS,
WILLIAM P. HERRON.

SUPERINTENDENT'S REPORT.

To the Board of Trustees:

Gentlemen—I submit for your consideration the following statement concerning financial transactions, scholastic record, and other matters pertinent to the Indiana State School for the Deaf for the fiscal year ending September 30, 1908; it being my twentieth annual report as Superintendent and the sixty-fifth annual report of the School.

APPOINTMENT OF TRUSTEES.

During the year the Hon. William P. Herron, whose term expired January 1, 1908, was reappointed by Governor J. Frank Hanly for a term of four years ending January 1, 1912.

CONCERNING OFFICIAL ROSTER.

The changes among officers, teachers and employes are reported as they occur from time to time during the year and it is not necessary to make report thereof in detail at this time. Briefly, the corps of teachers in the literary department remains as it was the beginning of the year. Miss Louise O. Sims, normal student, having completed the full two-year course in June, accepted a position as teacher in the Louisiana School. The normal class this year consists of Misses Nelle C. LaGrange and Blanche Van Deveer, who are completing their second year in training, and Mattie V. McClary and Allie Arnold, who have just entered for the first year of the course. In the industrial department Mr. Will G. Ross, who had served one year as instructor in typography and as editor of the *Silent Hoosier*, the school paper, retired in June to enter business for himself as owner and publisher of a weekly newspaper. He has been succeeded by Mr. John E. Travis, who comes to the work thoroughly equipped in all ways. Albert F. Bales and Thomas Matthews, boys' supervisors, have been succeeded by Thomas Bloomer and Frank Morris.

ADMISSIONS, ATTENDANCE, ETC.

The following tabulations will show admissions, discharges, attendance and non-attendance for the year:

	<i>Boys.</i>	<i>Girls.</i>	<i>Total.</i>
Actual attendance October 1, 1907.....	140	134	274
Late in returning.....	18	7	25
Readmitted after absence of year or more.....	6	5	11
New pupils received during the year.....	15	16	31
<hr/>			
Total enrollment during year.....	179	162	341
Discharges during the year.....	9	5	14
<hr/>			
Leaving enrolled for new year.....	170	157	327
Actual attendance September 30, 1908.....	150	138	288
<hr/>			
Showing absentees from last school year.....	20	19	39

CAUSES OF DISCHARGE.

	<i>Boys.</i>	<i>Girls.</i>	<i>Total.</i>
Removal from State.....	..	2	2
Non-attendance	1	1	2
Improper conduct	3	..	3
Graduation	5	2	7
<hr/>			
Totals	9	5	14

CAUSE OF NON-ATTENDANCE.

	<i>Boys.</i>	<i>Girls.</i>	<i>Total.</i>
Death	1	..	1
In public school.....	..	1	1
Tired of school	1	1	2
Working	2	..	2
Housework at home.....	..	2	2
Ill health	1	2	3
Removal from State.....	1	3	4
Cause unknown.....	4	5	9
Will return later.....	9	6	15
<hr/>			
Totals	19	20	39

RESIDENCE OF PUPILS.

Your attention is called to a tabulated statement, arranged by counties, in a subsequent part of this report, showing the number of pupils received, the number discharged and the number remain-

ing entitled to the benefits of the school. The number entitled to its benefits is larger than the number shown at the end of any one year, for this statement refers only to those who have been in attendance at some time during the fiscal year, those of the preceding years, although entitled to readmission, being dropped from consideration—these number about thirty yearly. An inspection of the statement will show that pupils have been received from eighty-one of the ninety-two counties, those not represented being Brown, Crawford, Decatur, Franklin, Jennings, Martin, Parke, Randolph, Scott, Union and Warren.

INFIRMARY MATTERS.

The case record below shows 303 cases registered in the infirmary during the year, 146 boys and 157 girls; but this does not include the many little complaints and accidents treated by the nurse and her assistant during each day of the school year—pills, pellets and drops, tonics, salves and bandages, and with them all, consolation in the way of soft words and gentle actions.

During the year it became necessary to employ a special nurse at various times to properly care for contagious or serious cases needing isolation and constant attention at a total cost of \$152.50 for 61 days' service, and this amount was charged to drugs, medicines and appliances.

All cases of sore throats were promptly and carefully examined for diphtheria. Many cultures from the throat for this purpose were made for microscopic examination. Fourteen cases of diphtheria were presented, in each of which antitoxine was immediately injected and the patient completely isolated under the care of a special nurse. In no case was a patient released until microscopic examination of a culture showed complete absence of diphtheritic germs. In some instances immunizing doses of antitoxine were administered.

No deaths occurred during the year and all cases made satisfactory recovery. Every possible attention to those in illness was given by the physician and the nurses.

INFIRMARY CASE RECORD.

	<i>Boys.</i>	<i>Girls.</i>	<i>Total.</i>
Accidents	9	2	11

GRADUATIONS.

At the close of the school year in June the usual commencement exercises were held, five young men and two young women who had completed the full course of study being presented for graduation honors. Their names, residence and subjects of essays or recitation follow:

Class Sentiment—*No Success Without Effort.*

Essay—"The Young Man of Today".....	Walter George Wilson, Cutler
Recitation—"The Ivy Green" (Dickens) ..	Antoinette Grace Truax, Paragon
Recitation—"The Name of Old Glory" (Riley)	
.....	William Frank Albright, Hope
Essay—"Three Noted Women of Olden Time"....	Essie May Wall, Dugger
Recitation—"Cavalry Song" (Stedman)—	Walter Frederick Stoltz, Wanatah
Recitation—"The Liquor Traffic" (Governor J. Frank Hanly)	
.....	George Edward Clark, Attica
Essay—"The Evolution of the Farmer".....	
.....	William Seyferlich Yoder, Shipshewana
"The Star-Spangled Banner".....	By the Class

The address of the day was delivered by the Hon. James Bingham, Attorney-General of the State, and presentation of diplomas made jointly by the president and secretary of the Board of Trustees. On Sunday afternoon, May 31st, the baccalaureate sermon was delivered by William H. DeMotte, LL. D. The commencement programme was remarkable this year in that it bore the names of three former graduates of the school: Rev. Austin W. Mann, class '58, Cleveland; Rev. Philip J. Hasenstab, class '79, Chicago, and Rev. Charles O. Dantzer, class '81, Philadelphia.

THE SCHOOL.

It cannot too often be stated that this institution is open to all the deaf of the State, with or without speech, and free of charge, provided they are of suitable age and capacity and too deaf to be properly educated in the common schools; and that it is in no sense an asylum for the deaf nor a place of refuge for those who cannot talk—neither is it a prison, a reform school, an almshouse, a children's home, nor a hospital. On the contrary, it is strictly an educational institution, a school in its widest and best sense, and really a part of the common school system of the State, wherein deaf children receive an education as matter of right, not of charity.

This being the case, our every effort is, as it must be, along educational lines approved by modern pedagogies, to the end that those going out from the school shall be properly prepared to become useful citizens and of material worth to the State. The preservation and prosperity of a free people, or of any form of government which is of the people, depends not upon those in high place, not upon those of brilliant minds, not upon those who accumulate the riches of earth, but most decidedly upon the average, self-supporting men and women, who are of stout hearts, clear heads, skillful

hands and good morals. This is the class which embraces the true manhood of our country, and constitutes its bone and sinew, and its bulwark of liberty. It is into this class we strive to graduate our deaf boys and girls—and a knowledge of what our former pupils, now men and women, are doing throughout the State tells of our success.

INDUSTRIAL TRAINING.

But there are many things not now done which would make for greater success and which we would do were our facilities and environment different from those now prevailing. While the literary or academical training would be strengthened and enlarged, especially so would be the industrial training which should be made of wider scope and more perfect for the needs of the times. The general trend of education at present is toward a combination of cultural and utilitarian processes, toward vocational schools. Industrial training is permeating the classrooms everywhere, from the little country school to the great university, and with such force that old-time specious argument cannot withstand its just demands.

In the establishment of vocational schools the schools for the deaf throughout the country assumed the initiative long years ago and have ever insisted upon co-ordinating the head, the heart and the hand with cultural-utilitarian end in view whatever the subject or line of work. But withal, we have strayed along in an easy-going rut and are not doing at present what the needs of the deaf, the demands of the times, and our bounden duty require of us.

Consider a moment. Thirty-eight and one-half per cent. of the deaf over ten years of age (as against fifty per cent. of hearing-speaking of same age) are gainfully employed, entering into nearly every occupation pursued by the people of the United States (forty-three per cent. of the deaf if over twenty years of age); and eighty-one per cent. gainfully employed of those who have had schooling, thus indicating the value of education such as we have given them. Concerning the small percentage of the deaf over ten years of age who are reported as gainfully employed, it is to be noted that a great majority of those under twenty years of age are in schools. Comparing the per cent. of the deaf and the per cent. of the general population over ten years of age gainfully employed, we find that in three leading groups (agricultural pursuits, manufacturing and mechanical pursuits, domestic and personal service) the deaf number 89.7 per cent., the general population 79.3 per cent. In trade and transportation (deaf 6.9, general population 16.4), and in pro-

fessional services (deaf 3.4, general population 4.3), which generally require hearing and speaking power, we find 10.3 per cent. for the deaf and 20.7 per cent. for general population.

With such facts before us the value of vocational training looms up large and demands that in our schools for the deaf greater scope shall be given to such training, that better facilities be provided, and that the most efficient teachers trained by education and practice to teach the "*How*" and "*Why*" shall be employed. Shall we give heed to the necessity? And shall we give to the deaf the opportunities their welfare in life, therefore the welfare of the State, demands?

If relative values of industrial and academial training were to be expressed numerically in percentages, I believe that the great importance of the former and its influence upon the lives and welfare of the deaf should be listed at sixty per cent., the latter at forty per cent., at the least, fifty and fifty, respectively; and that in the industrial course there should be a combination of manual-training and trade-teaching ideas so correlated with the academial course as to make for cultural training in all things. Then would we send out into the world in greater degree than now self-respecting, self-supporting and self-made men and women, who would be independent and of worth and of material value to the State.

In Indiana we hope to make better the existing conditions if appropriations by the State will permit of proper industrial buildings and facilities in our new school—otherwise we cannot. And this matter of scant appropriations (as well as too much insistence upon other things—cultural, speculative and theoretical), I take it, is one of the main reasons why our various state schools for the deaf over the country have rested somewhat satisfied in following out the old line of industrial training. A change, however, is taking place—some of the schools are up and doing through generous aid and their deaf students are being greatly benefited, as is their right.

Shall the deaf of Indiana be denied that which is given to their more fortunate hearing-speaking brother at home when with equal opportunity the deaf one may become his equal, in many cases his superior? Shall Indiana lag behind?

At present the boys with us are given opportunity for instruction in printing—composition and presswork; carpentry, cabinet-making and woodturning; painting, varnishing and glazing; shoe-making and repairs; harnessmaking; tinsmithing; baking and cooking; floriculture, and barbering. The girls have opportunity

for training in light household duties; laundry ironing; scientific cooking; various kinds of needlework; typewriting, and various forms of art work—sketching, designing, wood carving and painting in oil and water colors and in pastel.

In the new school, in addition to the branches now presented and which will be strengthened, it is intended to introduce from time to time, as future circumstances may permit and require, mechanical drawing, pattern making, molding, bricklaying, lathing, plastering, papering, decorative painting, cement work, tile-setting, bookbinding, millinery and garment cutting and making, etc.; and following the laboratory plan, give instruction in scientific agriculture (selection of seeds, composition and fertilization of soils, care, use and sale of products, knowledge of farm machinery and its mechanism, keeping of farm accounts, etc.); in horticulture (knowledge of fruits, selection of trees, budding, grafting and spraying, gathering and care of fruits, etc.); and in dairying (selection, care and feed of cows, the sanitary production, cooling and preservation of milk, the making of butter, etc.). The boys' and girls' industrial buildings have been planned with these things in view.

In a general way it is hoped to establish in connection with their academical work a course of industrial education for the boys which shall cover both the manual-training and trade-teaching ideas, as follows: A manual-training course covering a number of various kinds of labor, including sloyd, wood and iron work, which all must follow for four or five years, after which they will pass into individual trades, to be followed exclusively for three or four years. This combined industrial course is to be supplemented by a post-graduate course of one year, during which the entire time is to be devoted to the trade in hand; and by the establishment of a summer course of six weeks for present or former pupils under certain conditions.

For the girls, in addition to the occupations enumerated, there will be provided a course in general housekeeping. A portion of the girls' industrial building, entirely separate from that for the boys, has been planned as a residence containing five bedchambers, sitting-room, dining-room, kitchen and basement laundry. Classes of four girls each will be assigned in rotation to "a week in residence," during which time they must do their own housework—cooking, baking, laundering for selves and of household linens, cleaning, etc. All of this work will be under the direction of the supervising teacher of girls' industries, who will room in the residence as chaperon to the girls and live with them.

TRIENNIAL REUNION OF THE DEAF.

The Indiana Association of the Deaf met in seventh triennial reunion at the School on Friday, Saturday and Sunday, June 5-7. The sessions were held in the school chapel. The writer delivered the address of welcome on behalf of the institution and the Honorable Charles A. Bookwalter, Mayor of Indianapolis, extended hospitalities on behalf of the city. On Sunday a handsome oil portrait of the late Dr. William H. Latham, a teacher in this school for forty-eight years, and for nearly sixty years a teacher of the deaf, was presented to the school by the deaf of the State.

The portrait was unveiled by Mrs. Quincy Trout, one of his first pupils in the Ohio School in 1846, and by Mrs. John Wharton, one of his pupils in the Indiana School in 1901.

Representatives were in attendance from all parts of the State, and many from other states. Much important business was transacted and preliminary steps were taken for the establishment of a Home for the Aged and Infirm Deaf of Indiana, a board of trustees for the endowment fund and a committee of fifteen to serve with the president and secretary of the association, being appointed for the purpose. A visit was made to the new school in course of erection in Forty-second street and a banquet was held before final adjournment, at which a long list of "toasts" was responded to. The reunion was an enjoyable affair in every way. In this connection it may be added that all expenses incurred, of whatever kind, were met in full by the association which made a charge sufficient for the purpose upon each member in attendance.

The resolutions adopted by the association were vigorous ones and are given in full elsewhere in this report. The officers elected by the association for the ensuing three years are as follows:

President, Arthur H. Norris, Daleville.

Vice-Presidents—

Northern district, Mrs. George G. Roots, Michigan City.

Central district, Orson Archibald, Indianapolis.

Southern district, Mrs. Dennis Dunn, New Albany.

Recording Secretary, Robert E. Binkley, Indianapolis.

Corresponding Secretary, Miss Cora E. Coe, Yates City, Illinois.

Treasurer, N. Lee Harris, Indianapolis.

Endowment Fund Trustees—

President, Henry Bierhaus, Indianapolis.

Secretary, Philip J. Hasenstab, Chicago.

Treasurer, August Jutt, Indianapolis.

PROFESSIONAL GATHERINGS.

During the year the writer attended the meeting of the National Educational Association, in Cleveland, the meeting of the National Society for the Promotion of Industrial Education, in Chicago, and also that of the convention of American Instructors of the Deaf, in Ogden, Utah. At the latter meeting he was in charge of the Kindergarten Section, served as chairman of committee on resolutions, was elected a director and member of the executive committee of the association and appointed member of a standing committee on Carnegie Fund Extension.

At this meeting the writer presented and discussed briefly the following papers by Indiana teachers:

Miss Nellie J. Schrock—"Speech and Speech-Reading in Kindergartens."

Miss Nora V. Long—"The Opened Eye-Gate, or Oral Work in Primary Grades."

Miss Amelia DeMotte—"The Mission and Possibilities of Oral Work in Advanced Grades."

Miss Jolliette E. Constantine—"The Value of Rhythm in Oral Work."

In the appointment of standing committees for the ensuing three years three of our teachers were selected—Miss Schrock, as chairman of the Kindergarten Section; Miss Constantine as member of the Auricular Section; and Miss Frances L. Glenn as member of the Oral Section.

THE NEW INSTITUTION.

Continuing the story of the building of the new institution in Forty-second street, reference to which has been made in detail in the last four annual reports of the school, it is to be reported further that the buildings and mechanical equipment provided for in the appropriations heretofore made and reported are rapidly nearing completion. The work now under contract comprises the Schoolhouse, the Dining Hall and Kitchen-Bakery buildings; the power house and tunnels; the smokestack; the boys' dormitory group, less one wing; the girls' dormitory group, less one wing; and the mechanical equipment in part (about one-third). It will of course be impossible for the school to be removed from its present site to the new location until further appropriations are made and other necessary buildings added to the group.

The appropriations thus far made for the purpose have amount-

ed to \$682,277.00, to which should be added various receipts for interest, lease rent, sale of crops, etc., amounting to \$12,852.98, thus making total receipts to date \$695,129.98. To complete the institution, according to original plans and for grading of grounds, building of fences, walks and driveways, outside fire, water and lighting systems, sewers, and for complete equipment, etc., making use of unexpended balances at this time (\$7,345.83), will require \$402,033.67. This will make the total gross cost of the new institution, built for a century to come and with ample capacity (500-720), including cost of grounds, all expenses incident thereto, and for supervision, architects' fees, etc., \$1,097,163.65. If from this gross cost we deduct the proceeds arising from the sales of our old grounds and buildings, and miscellaneous receipts incident thereto (\$207,598.98), the total net cost to the State will be \$889,564.67.

In this connection attention is called to the following resolution passed by the Indiana Association of the Deaf, which made thorough examination of the new buildings and the proposed scope of the new school at its triennial meeting, held in Indianapolis during the past summer:

Resolved, That we urge the speedy completion by the State of the new Indiana State School for the Deaf in Forty-second street according to the original plans which in every way we thoroughly approve and endorse. As citizens and tax-payers vitally interested in the education of the deaf, we ask the members of the next General Assembly to make sufficient appropriation for such completion to the end that Indiana shall rejoice in substantial buildings of ample capacity, offering increased educational facilities, and in every way commensurate with the school's growing needs and the dignity of a great State. A false economy in the beginning but leads to extravagance in the future. This school has been in operation for sixty-four years—the new buildings will stand for a century to come if made right from the beginning.

RECEIPTS AND DISBURSEMENTS.

The regular appropriations for maintenance, industries and repairs for each year of the biennial term ending September 30, 1909, were as follows:

	1907-08.	1908-09.
Maintenance	\$70,000 00	\$70,000 00
Industries	4,500 00	6,000 00
Repairs (nothing).		

And in addition thereto, for maintenance, \$195.00 per capita per annum for each pupil present over a daily average of 325 each month, styled "Excess Allowance." There was nothing received on this account during the past year.

The disbursements during the year just closed were for maintenance, \$69,999.99 (which included repairs, \$879.49); for industries, \$4,139.05. Cash earnings received amounted to \$789.90, which were paid into the State Treasury; and clothing accounts against divers counties for various pupils, amounting to \$850.32, were filed with the State Treasurer for collection. Neither the earnings nor the collections for clothing inured to the benefit of the institution, but passed into and were credited to the General Fund. These various accounts are set out in detail in exhibits in a subsequent part of this report.

We completed the year ending September 30, 1907, when the appropriation was \$70,031.76 (including excess allowance, \$31.76), without deficit only because that fiscal year was made to cover but eleven months instead of twelve. While our annual appropriation was reduced one-twelfth (\$5,833.33), we were at the same time relieved of the expense during that year of the month of October, always the heaviest of the year. Had the year continued to be one of twelve months and the reduction not made, we would have faced a deficit.

For the past year of twelve months ending September 30, 1908, with increasing prices and expenses and certain absolutely necessary repairs to be made, we also closed the year without deficit, returning to the General Fund one cent of the fund for maintenance, and \$360.95 of the fund for industries. This was made possible only by the very closest "trimming" to meet conditions, by leaving undone altogether certain necessary things, and by postponing until the new year came in certain other expense which could not be avoided. The condition is growing worse; we are robbing Peter to pay Paul, and, without some relief for the current year, the school year may have to be shortened.

Concerning repairs and considering the fact that probably it will be September, 1910, before we are able to occupy the new institution, some assistance is needed along this line. At the present time all expenditures for repairs which are unavoidable must be made from the fund appropriated for maintenance, which is inadequate for its own purpose. During the past year these repairs amounted to \$879.49, an itemized list of which will be found in exhibit No. 3 following.

In this connection it may be stated that prior to October 31, 1903, there was appropriated annually for current repairs the sum of \$4,000.00. For each of the four years following, this amount was reduced to \$1,000.00, and for the past and current years we have

had no appropriation at all for the purpose; in other words, the sum of \$20,000.00 for repairs has been withdrawn during the six years. This fact, and the further fact that the buildings, equipment and apparatus are old, very old, as inspection will show, will indicate the hapless condition that a State school, established sixty-four years ago, is now in—dilapidated and unfit and unsafe for habitation, many boys and girls having to sleep in dormitories on the fourth and fifth floors. The old buildings are clustered closely together—all connected by wooden corridors—and present a fine condition for some terrible catastrophe by fire or accident. This is one of the reasons we advanced for a new institution on the segregate plan and also one of the reasons for now holding the attendance down to 300, although this is greatly in excess of what the enrollment should be under existing conditions. Parents and others are objecting to the lack of security of their children, and we have called legislative attention thereto divers times in the past.

We respectfully ask that for the current year ending September 30, 1909, specific appropriations be made as follows: For maintenance, \$2,000.00; for repairs, \$1,000.00.

FOR BIENNIAL TERM 1909-1911.

Concerning appropriations for the biennial term, October 1, 1909, to September 1, 1911, it is to be noted that the first year of the term we shall still be in our present location—with the attendance of pupils during the scholastic year limited to about 300, our present limitation; during the second year of the term we hope to be in the new location with greatly enlarged facilities in every way, especially in the industrial department, and with an attendance during the school year of probably 350-375 pupils, necessitating greater expense and larger appropriations. We therefore ask that the regular appropriations be made as follows:

For first year of biennial term, in old location, October 1, 1909-September 30, 1910.

Maintenance	\$72,000 00
Industries	5,000 00
Repairs	500 00

For second year of biennial term, in new location, October 1, 1910-September 30, 1911.

Maintenance	\$83,000 00
Industries	8,000 00
Repairs	1,000 00

Or, for the second year for maintenance the same as for the first year and \$195.00 per capita per annum for each pupils present over a daily average of 325 each month during the school year.

NET AND GROSS PER CAPITA EXPENSE, REGULAR FUNDS.—FOR
FISCAL YEAR ENDING SEPTEMBER 30, 1908.

Gross maintenance for year.....	\$69,999 99
Less value of clothing, etc., furnished indigent pupils, and which will be refunded State by counties	\$850 32
Less cash earnings received and paid into general fund by institution.....	789 90
	<hr/>
	\$1,640 22
Net cose of maintenance.....	\$68,359 77
The cost of industries.....	4,139 05
	<hr/>
Total net cost to State for year.....	\$72,498 82
Average daily number of pupils, 291.472.	
*Net per capita cast of maintenance.....	\$234 5328
The per capita cost of industries.....	14 2005
	<hr/>
**The total net per capita cost.....	\$248 7333

During the year the number of different pupils enrolled was 341. If this number be used as the divisor, the net per capita cost would be \$212.60, instead of \$248.73—the gross per capita cost \$217.41, instead of \$254.36.

In conclusion, your attention is called to Course of Study in Detail, to Rules Concerning Admissions, to a statement showing Pupils by Counties, to Roster of Pupils, and to Exhibits 1 to 10, inclusive, giving classified and itemized statement of a fiscal nature for the year ending September 30, 1908, all of which are hereinafter set out and made part of this report.

Respectfully submitted,

RICHARD O. JOHNSON,
Superintendent.

*Gross per capita cost, \$240.1602.

**Total gross per capita cost, \$254.3607.

RESOLUTIONS ADOPTED BY THE INDIANA ASSOCIATION OF THE DEAF.

Resolved, By the Indiana Association of the Deaf, assembled in Seventh Triennial Reunion at the Indiana State School for the Deaf, Indianapolis, this 6th day of June, 1908:

First. Whereas, Superintendent Johnson has served the institution faithfully for twenty-five years, over five years as secretary and over nineteen years as superintendent; and

Whereas, The trustees of the institution, at a board meeting September 30, 1907, saw fit to recognize his services by appointing him superintendent to serve during his pleasure, and for life as far as lay in their power; and

Whereas, During his incumbency Mr. Johnson has made the institution one of the best in the country, and has administered it in a thoroughly efficient and non-partisan manner, for the benefit of the deaf and the welfare of the State; therefore, be it

Resolved, That the Indiana Association in convention assembled June 6, 1908, heartily endorses the action of the board; and be it further

Resolved, That the association extends to Mr. Johnson its best wishes for many more years of usefulness in the service of the deaf and of the institution.

Second. Resolved, That we urge the speedy completion by the State of the new Indiana State School for the Deaf in Forty-second street according to the original plans, which in every way we thoroughly approve and endorse. As citizens and taxpayers vitally interested in the education of the deaf we ask the members of the next General Assembly to make sufficient appropriation for such completion, to the end that Indiana shall rejoice in substantial buildings of ample capacity, offering increased educational facilities, and in every way commensurate with the school's growing needs and the dignity of a great State. A false economy in the beginning but leads to extravagance in the future. This school has been in operation for sixty-four years—the new buildings will stand for a century to come if made right from the beginning.

Third. Resolved, That in the Honorable J. Frank Hanly, Governor of the State, the deaf of Indiana have a friend who has evinced great interest in their education and general welfare, and one with broad and correct views as to the status of the deaf and of the school established for their education—and to him we express our heartfelt appreciation and tender our sincere thanks.

To the Honorable James Bingham, Attorney-General, and to the Trustees of the school, constituting with the Governor the Building Commission, to Superintendent Johnson, and to others who have had to do with the building of the new school we also express appreciation and thanks for their great interest in the undertaking.

Fourth. Resolved, That we unreservedly endorse the preamble and resolutions concerning the education of the deaf, a veritable bill of rights, adopted by the Eighth National Convention of the Deaf, held in Norfolk, Virginia, July 4-6, 1907, especially calling attention to the following, which we most heartily approve:

“Resolved, That education of the deaf on the part of the State is sim-

ply fulfillment of its duty as a matter of right and justice, not of sympathetic charity and benevolence to the deaf.

"That schools for the deaf should not be known and regarded nor classified as benevolent and charitable institutions. On the contrary, they should be known and regarded and classified as strictly educational institutions, a part of the common school system of the State under the advisory supervision of the regularly constituted school authorities, instead of being supervised by boards of charity, legislative benevolent committees and the like, which tend to foster a spirit of dependence in the pupils and mark them as objects of charity, wards of the State, which they are not any more so than are the children with hearing who attend the public schools.

"That we enter our vigorous protest against the constant association and comparison in convention assemblies of whatever nature, and in published reports, etc., of deaf children with the feeble-minded, the epileptic, the insane, the incorrigible, the physically deformed and the diseased, with inmates of penal institutions and others of like classes, generally referred to as 'defectives,' a term which we resent as opprobrious, when applied to the deaf, used as it commonly is to designate mental, moral and physical degeneracy.

"That for the furtherance of more complete emancipation from the thralldom of the past, with its ill-conceived and false notions concerning those who can not hear, or hear but imperfectly, we recommend the appointment of a committee of five to work for its attainment in Indiana and earnestly urge agitation of the matter upon every member of the Legislature." And be it further

Resolved, That the published proceedings of this Seventh Reunion of the Indiana Association of the Deaf give the aforesaid preamble and resolutions in full, and that same shall stand as our faith and belief.

Fifth. Resolved, That the action of the United States Civil Service Commission denying to the educated deaf the privilege and right of competitive examination for public position, which had been theirs for twenty-three years prior to 1907, and the approval thereof by the President, be severely condemned. Contrary to intimation of the commission the deaf do not expect created offices or vacancies, do not expect consideration of personal necessities, do not ask for sympathy, official or otherwise, do not ask to be relieved by self-constituted official guardians of "the trouble and expense of the process" of examination—but they do ask that which is their birth-right in this democratic country of ours, the right of honest and upright citizens and taxpayers, to aspire to public position through competitive examination. And neither the arbitrary ruling of a created and subordinate commission, endorsed though it is by the President, nor the "relentless rejection" of appointees by prejudiced department officers, should prevail. The whole thing is unjust—the action of the commission and President a backward step—and one that in reason should be reversed. The much-vaunted "square deal" has not been given the deaf. And every effort should be made to the end that it shall be given.

Sixth. Resolved, That the sincere thanks of the association are extended to Superintendent Johnson and United States Senator Beveridge for their earnest effort to influence the United States Civil Service Commission to recede from its unjust stand in excluding deaf-mutes from the examina-

tions for positions under the government. Although their efforts, so far, have not met with success, we entertain the hope that their continued agitation of the subject will result favorably. We respectfully ask the assistance in this matter of our Senators and Representatives in Congress from Indiana, and of all who believe in right and justice, to the end that the obnoxious ruling of the commission shall be reversed.*

Seventh. Resolved, That the thanks of the convention be and are hereby tendered to the Board of Trustees and to the Superintendent for the use and hospitality of the institution buildings and grounds during our meeting; to Mrs. C. E. Johnson, matron; Miss Mary E. Cook, housekeeper, and their assistants, for the admirable manner in which they arranged for our entertainment; to Messrs. Clarence A. Carll and Utten E. Read for their most helpful services; to Heinzmann Brothers, contractors for the new school, and their assistants, for courtesy shown; and to the retiring officers and committees of our association for their faithful and highly successful labors.

Eighth. Resolved, That we thank the Honorable Charles A. Bookwalter, Mayor of Indianapolis, for his attendance at our opening session, and the Board of Public Parks for their action in naming these old beloved grounds of ours Willard Park in memory of the founder of our school.

Ninth. Resolved, That a committee of five be appointed by the president to solicit a fund with which to erect a bronze statue of William Willard in Willard Park and that said committee report progress at the next triennial reunion.

Tenth. Resolved, That all the persons named in the foregoing resolutions and the individual members of boards and commissions named, be recorded as honorary members of this association, together with Rev. G. F. Flick, Mrs. P. J. Hassenstab, Mrs. J. F. Creelman, Mrs. Mary Dundon, Miss Ruby Martin, Miss Mary V. Johnson, Prof. R. P. McGregor.

*On December 1, 1908, President Roosevelt issued an Executive Order rescinding former action, and in the Civil Service Manual issued in January, the words "total deafness" have been omitted from the list of "defects" debarring persons from examination for positions in the classified service.

*COURSE OF STUDY IN OUTLINE.

PRIMARY GRADES.

Grade 1—

Language—Past, present and future tenses, active voice, with auxiliaries be and have; positive, negative and interrogative; vocabulary, parts of speech and sentence models as prescribed. Arithmetic—Notation 1 to 31, with Arabic and number-words; addition and subtraction to 10, teaching plus and minus signs; mental and written. Penmanship—Instruction with pencil and crayon, followed by pen and ink exercises. Letter Writing. Good Morals and Gentle Manners. Object and Observation Lessons.

Grade 2—

Language—First grade verb forms and sentence models continued, with added auxiliaries; present progressive; present habitual; conjugation; vocabulary, parts of speech and sentence models as prescribed. Arithmetic—Notation 1 to 100, Arabic and number words; Romans and ordinals to 12; addition and subtraction to 100; mental and written. Penmanship—Copy-book work, Nos. 1 and 2. Drawing—First principles, blackboard, slate and paper; drawing book, No. 1. Letter Writing. Good Morals and Gentle Manners. Object and Observation Lessons.

Grade 3—

Language—First and second grade forms and sentence models with auxiliaries continued; infinitive; imperative mode; conjugation; vocabulary, parts of speech and sentence models as prescribed; journal writing. Arithmetic—Notation 1 to 1,000; Arabic and number words, Romans and ordinals to 100 and higher; addition and subtraction; dollars and cents; measuring; mental and written. Geography—Introductory work by teacher; positions, cardinal points, locations, plans, etc. Penmanship—Copy-book work, Nos. 3 and 4. Drawing—Drawing books, Nos. 2 and 3. Letter Writing. Good Morals and Gentle Manners. Object and Observation Lessons.

Grade 4—

Language—Previous verb forms and sentence models continued; present perfect tense; passive voice; conjugation; vocabulary, parts of speech and sentence models as prescribed, introducing idioms; journal writing. Arithmetic—Numbers above 1,000, with Arabic and number words, Romans and ordinals to correspond; addition and subtraction, multiplication and division, with not more than two figures in multiplier and divisor, teaching multiplication and division signs; aliquot parts; dollars and cents; measuring; buying and selling; mental and written. Geography—Third grade work continued and enlarged, concerning institution, city, county and state, showing principal towns, rivers, lines of railway, highlands, lowlands, mineral and agricultural products; map drawing. Penmanship—Copy-book work, Nos. 5 and 6. Drawing—Drawing books, Nos. 4 and 5. Letter Writing. Good Morals and Gentle Manners. Object and Observation Lessons.

* Elaborated in form for primary grades in "Course Limitations," wherein is detailed the monthly development and limitations in language, arithmetic and geography.

***Grade 5—**

Language—Previous verb forms and sentence models continued; past perfect tense; present participle; systematic instruction in idioms; vocabulary, parts of speech and sentence models as prescribed; journal writing. Arithmetic—Practical problems in the four fundamental rules, introducing properties of numbers; weights and measures; United States currency. Geography—First lessons; general division and features of land and water, and form of earth; map drawing. Penmanship—Copy book work, special selection. Drawing—Drawing books, Nos. 6 and 7. Letter Writing. Good Morals and Gentle Manners. Object and Observation Lessons.

INTERMEDIATE GRADES.**B Grade—**

Language—General review of primary-grade verb forms and sentence models; future perfect tense; potential and subjunctive modes; past and past perfect participles; systematic instruction in idioms continued; journal writing. Arithmetic—Cancellation; fractions and decimals begun; United States currency; practical problems in money; bills and accounts. Geography—Elementary mathematical, physical and political; map drawing. History—First and second terms, introductory work by teacher, concerning institution, city, county and state; third term, stories of American history. Drawing—Special selection. Good Morals and Gentle Manners. Object and Observation Lessons.

A Grade—

Language—Grammar; idioms and general reading continued; compositions. Arithmetic—Fractions and decimals completed; denominate numbers and measurements; exercises in commercial forms. Geography—World's mathematical and physical; globe and map studies; map drawing. History—Elementary United States.

ACADEMIC GRADES.**Junior Grade—**

Language—Grammar; general reading and idioms continued; compositions. Arithmetic—Percentage, practical problems in profit and loss, commission, insurance, taxes, duties, etc.; exercises in commercial forms. Geography—World's political; map drawing. History—Complete United States and stories of.

Middle Grade—

Language—Grammar and general reading; compositions. Arithmetic—Interest; discount; exchange; partnership; ratio and proportion. History—First and second terms, general history; third term, English; selections, and stories of both. Physiology and Anatomy—Elements of, and lectures, making use of anatomical models, skeletons, etc.

*The future perfect tense, the potential and subjunctive modes, except as introduced under auxiliaries, and the past and past perfect participles, are to be taken up in the intermediate grades.

Senior Grade—

Language—Grammar and literature; compositions. Arithmetic—Analysis; roots; mensuration; general review. Natural Philosophy—Lectures and experiments. Moral Philosophy—Lectures. Civics—Outline in general, United States in particular. Current Events.

*TEXT-BOOKS USED.

Grade 1—No books; lesson-papers.

Grade 2—No books; lesson-papers.

Grade 3—First Reader (Cyr); lesson-papers.

Grade 4—Stories for Language Study (Kellogg).

Arithmetic (Original Work by Teacher).

MS. Geography (Teacher).

Lesson-papers.

Grade 5—Stories of Great Americans (Eggleston).

Arithmetic (Original Work by Teacher).

First Lessons in Geography (Monteith).

Lesson-papers.

B Grade—First Lessons in Language. Part I (Tarbell).

Stories of American Life and Adventure (Eggleston).

Elementary Arithmetic (Walsh).

Elementary Geography (Frye).

MS. History (Teacher).

First Book of American History (Eggleston).

A Grade—First Lessons in Language. Part I (Tarbell).

Book of Tales (Edited by Swinton).

Complete Arithmetic (Walsh).

Complete Geography (Frye).

Elementary History of the United States (Quackenbos).

Junior Grade—First Lessons in Language. Part II (Tarbell).

Old Stories of the East (Baldwin).

Complete Arithmetic (Walsh).

Complete Geography (Frye).

History of the United States (Higginson).

Middle Grade—Lessons in Language. Part II (Tarbell).

Ten Great Events in History (Johonnot).

Complete Arithmetic (Walsh).

General History (Anderson).

English History (Higginson and Channing).

Physiology, "Our Bodies and How We Live" (Blaisdell).

Senior Grade—Lessons in Language. Part II (Tarbell).

Primer of English and American Literature (Clarke).

Shakespearean Primer (Institution edition).

Complete Arithmetic (Walsh).

Natural Philosophy (Cooley; lectures and experiments).

Moral Philosophy, lectures.

Civics (Townshend's Shorter Course).

* Various other text-books and supplementary readers for reference and general reading are made use of in the different classes.

RULES

CONCERNING THE ADMISSION AND RETENTION OF PUPILS AND WHAT SHALL BE TAUGHT THEM.

1. This institution is open to all the deaf of the state free of charge, provided they are of suitable age and capacity, and are too deaf to be educated in the common schools.

2. Pupils will be considered of proper school age between the years of eight and twenty-one, but the admission of pupils between the years of seventeen and twenty-one will depend upon circumstances. No child who is idiotic or feeble-minded or who is afflicted with sore eyes, or with a contagious or offensive disease, or who is an invalid so confirmed as to prevent study, or who is in a badly crippled condition and unable to go up and down flights of steps, or who is unable to care for self in a general way, will be received as a pupil.

3. This institution is in no sense an asylum for the deaf, nor a place of refuge for those who can not talk—neither is it a prison, a reform school, an almshouse, a children's home nor an hospital. It is strictly an educational institution—a school in its widest and best sense, and a part of the common school system of the State, wherein the deaf children of the State receive an education as a matter of right, not as a matter of charity.

4. Application for the admission of pupils must be made upon the regular blank form of the institution, which will be furnished the applicant by the superintendent. All questions on said form must be fully answered, and the requirement of certificates of a physician and of a justice of the peace on the back thereof (that the person seeking admission as a pupil is eligible physically and mentally and is a legal resident of the county named), must be complied with. (See Sec. 2999, R. S. 1901.)

5. No child shall be brought to the school as a pupil until the proper application has been filed with, and acted upon, by the superintendent, and due notice of admission sent by him to the applicant.

6. Those for whom applications have been made and favorably acted upon will be admitted as pupils on the following conditions: (a) They must be provided with clothing, and brought to the institution punctually at the time designated by the superintendent, unless detained at home by sickness. (b) They are to remain in school until the second Wednesday in June of each year. (c) No parent or guardian will be allowed to take a pupil out of school during the session without some very urgent reason. (d) Pupils will not be allowed to go home during the holidays, nor at Easter time, the annual session being a continuous one without a vacation.

7. The annual session of school usually begins on Wednesday of the week preceding the first day of October and closes on the second Wednesday in June. Pupils must report promptly at the beginning of the session. No pupil, unless under extraordinary circumstances, will be received at any time other than at the beginning of the annual session, because of the classes being graded and the work progressive from the first day.

8. The pupils will be sent home to spend the summer vacation on the day following the close of school.

9. The institution will provide for each pupil regularly admitted, boarding, lodging, washing, superintendence of conduct, manners and physical needs, instruction, school supplies, etc., but will not pay traveling expenses of pupils in coming to or going from the institution, nor supply them with clothing, except under certain conditions mentioned in Paragraph 12.

10. All traveling expenses of pupils to and from the institution must be defrayed by the parents, guardians or friends. They are also required to furnish annually to each pupil sent by them a sufficient quantity of suitable clothing to last until the close of the term. (See Sec. 3000, R. S. 1901.) A good, stout trunk must also be supplied. The name of the pupil must be written in indelible ink upon all articles of clothing, as they are liable to be lost when not so marked. While close and constant attention will be given to the preservation of pupils' clothing, the institution disclaims any responsibility for worn-out, lost or misplaced articles.

11. The applicant must deposit with the superintendent, when the pupil is admitted, a sum not less than \$5.00 to defray incidental expenses (shoes, repairs, etc.) for said pupil during the year. If any part of said deposit should remain unexpended at the close of the annual session, it will be returned or carried forward to the next session, as the applicant may desire.

12. When it is established that a pupil is in indigent circumstances, or when the parents, guardians or friends are either unable or neglect to furnish the necessary clothing, or to pay the necessary traveling expenses (going from the institution), then the same will be provided for by the superintendent in pursuance of the following legislative enactment:

Sec. 3001, R. S. 1901. In all cases where suitable clothing and means for defraying traveling expenses are not otherwise supplied to the pupils, the same shall be provided by the superintendent, who shall make out and file with the treasurer of state accounts therefor, separate in each case, against the respective counties from which the pupils are sent, in an amount not exceeding forty dollars per annum for every such pupil; which accounts shall be severally signed by the superintendent and attested by the seal of the institution under his charge; and the treasurer of state shall charge each account, thus certified, to the county from which the pupil named therein was sent, and credit the amount to the current expense fund of the proper institution.

Sec. 3002, R. S. 1901. The treasurer of state shall forward each account so filed with him to the treasurer of the proper county, who shall cause it to be paid out of the county treasury to the treasurer of state; and such county shall, in the name of the county, and by suit, if necessary, collect the amount of such account from the parents or estate of such pupils, as the case may be, where there is ability to pay: Provided, That at least three hundred dollars of the property shall be exempt from the payment of such account.

13. The regular course of study in the institution is so arranged as to cover ten years, and is divided into primary, intermediate and academic courses. The primary and intermediate courses embrace spelling, reading, writing, drawing, arithmetic, geography, history and grammar. The two courses are divided into seven grades, five primary and two intermediate,

and the time required to complete them is seven years. The academic course comprises a three years' course of advanced primary and intermediate work, and of other studies. In addition to the above, a kindergarten department, with two years' instruction, is provided for the younger and selected pupils. The regular kindergarten work for hearing-speaking children is adapted to the needs of the deaf, the second year merging into primary work. The number of years a pupil may remain in school is regulated by a time schedule, and depends upon the mental ability, progress and conduct of the pupil himself. He may remain certainly five years, subject to conditions named in Paragraph 14, and as much longer, up to thirteen years, as his conduct and promotions from year to year may warrant.

14. The superintendent shall have the power at any time to discharge a pupil from the institution for inability to receive an education, for non-progression or non-attendance, for violation of the rules of the institution, or where his retention would prove a detriment to others or to the school. He may also, when he thinks the facts warrant it, extend the period of instruction in individual cases.

15. It is the intention of the trustees to render the pupils self-supporting in greater or less degree after leaving the institution, by requiring them to become proficient in some useful trade or occupation, or in the underlying principles of several trades, while in attendance at the institution. In accordance with this design, all pupils will be required to labor a portion of each day, the girls performing the lighter kinds of housework, cooking, the various kinds of needlework, and dressmaking and millinery in all of their branches; the boys at various trades—typesetting, presswork, carpentry, cabinetmaking, woodturning, painting, glazing, cutting, fitting, making and the repair of shoes, harnessmaking, tinwork, baking, cooking, floriculture, barbering and farming. Pupils will be assigned to one or more of these occupations, or others, as the superintendent may deem them most fitted for. Drawing, freehand and mechanical, will be taught to all pupils during the first five years, and in the four higher grades all girls and selected boys will be taught sketching, designing, modeling, wood carving and painting in oil, water colors and pastel, etc.

16. In the education of the deaf there are two methods and one system of instruction generally recognized.

The manual or French method (using sign-language, manual alphabet and writing), of which there is a variation that may be called the "Alphabetic," wherein only the manual alphabet and writing are used.

The oral or German method (using speech and speech-reading and writing), of which there is a variation that may be called the "Auricular," wherein special attention is given to the development and training of the hearing, when possessed in any degree, by means of which instruction is partially given.

The Combined system (a so-called combination of the two methods).

Some of the leading German instructors, after long years of experience, favor the French method; some of the French schools have adopted the German method, but no country, other than America, has generally adopted the Combined system, which, in justice, should be called the American system.

The general system of instruction used in this institution is known as the American (combined) system, under which all known methods and their variations may be used for the attainment of an object common to all. Speech and speech-reading are regarded as very important, but mental development, and the acquisition of language and general knowledge, are regarded as still more important. It is believed that with a great many of the new pupils now entering, the necessary mental development and acquisition of language and general knowledge may be as well attained by the Oral method, which results in speech and speech-reading, as by the Manual method, which precludes this much-to-be-desired result. So far as circumstances permit, such method (or methods) is chosen for each pupil as seems best adapted to his needs and capacity after thorough trial. In short, the rule will be: *Any method for good results—all methods, and wedded to none.*

17. The institution is nonsectarian, but thorough moral and religious instruction will be given, especially on the Sabbath, the nature of it being general, and such as is accepted by all churches and creeds.

Sec. 3070, R. S. 1901. No sectarian tenets of religion shall be taught in the institution to any pupil thereof.

18. The parents and friends of the pupils may visit them as often as they wish and whenever they deem it proper, but they should be careful not to abuse this privilege to the harm of the pupil, who must be withdrawn from schoolroom or shop for the purpose. Parents and friends, or those bringing pupils to or taking them away from the institution, can not be furnished meals or lodging.

19. Being Sec. 3004, R. S. 1901. Whenever it shall be deemed necessary by the proper officers of the institution in accordance with the by-laws and regulations to have any pupil removed, either temporarily or on account of ill health, or the vacation of the school, or permanently on account of having completed his course of instruction, or been found disqualified from any cause for a longer continuance in the school, the parents or guardians of such pupil, if he have any, shall promptly remove him upon the requirement of said officers; and, in case he shall not be thus provided for, it shall be the duty of the superintendent of the institution to cause him to be removed and delivered to the trustees of the township where he resided before coming to the institution; and the expense of such removal shall be refunded in the same manner as provided in sections 3001 and 3002; and the county treasurer shall charge the same to the proper township and collect it in the manner as provided in aforesaid sections.

20. All business letters or letters of inquiry in regard to pupils or their concerns, or in regard to new pupils whom it may be designed to place in the institution, must be addressed to the superintendent, and not to subordinates (officers, teachers, attendants or employes)—otherwise no attention will be paid to such letters.

PUPILS BY COUNTIES.

The following table shows, by counties, the number of pupils admitted and discharged during the fiscal year, and the number remaining and entitled to the privileges of the Institution on September 30, 1908:

State of Indiana, Marion County, ss:

Personally appeared before me, a Notary Public, in and for said State and county aforesaid, Richard O. Johnson, Superintendent of The Indiana State School for the Deaf, who, being duly sworn, upon his oath says that the foregoing is a complete *itemized inventory of all property, real and personal, belonging to the said State School or to the State of Indiana and connected therewith, or in use in or about the same on the 30th day of September, 1908.

There are no liabilities.

Subscribed and sworn to before me this 18th day of December, 1908.

CLARENCE A. CARLL,
Notary Public.

[Seal.] My commission expires March 22, 1910.

*The itemized inventory, of which the foregoing is a recapitulation, is on file in the office of the Institution.

View of "Tippecanoe Park," an ideal forest-grove outing and fishing resort on the Tippecanoe River
near Yeoman, Indiana.

STATE OF INDIANA

EIGHTH ANNUAL REPORT

OF THE

State Board of Forestry

1908

W. H. FREEMAN, Secretary

To the Governor of Indiana

INDIANAPOLIS:

WM. B. BURFORD, CONTRACTOR FOR STATE PRINTING AND BINDING,
1908.

THE STATE OF INDIANA,

EXECUTIVE DEPARTMENT,

December 7, 1908.

Received by the Governor, examined and referred to the Auditor of State for verification of the financial statement.

OFFICE OF AUDITOR OF STATE,

INDIANAPOLIS, December 14, 1908.

The within report, as far as the same relates to moneys drawn from the State Treasury, has been examined and found correct.

JOHN C. BILLHEIMER,

Auditor of State.

December 14, 1908.

Returned by the Auditor of State, with above certificate, and transmitted to Secretary of State for publication, upon the order of the Board of Commissioners of Public Printing and Binding.

L. K. BABCOCK,

Secretary to the Governor.

Filed in the office of the Secretary of State of the State of Indiana, December 14, 1908.

FRED A. SIMS,

Secretary of State.

Received the within report and delivered to the printer, December 14, 1908.

HARRY SLOUGH,

Clerk Printing Board.

Letter of Transmittal

STATE OF INDIANA, BOARD OF FORESTRY,
INDIANAPOLIS, IND., December 1, 1908.

HON. J. FRANK HANLY, *Governor*:

DEAR SIR—In compliance with the law we have the honor to submit herewith the manuscript of the Eighth Annual Report for the Department of Forestry. It contains recommendations for the further promotion of the work of forestry in several valuable features as in the judgment of the Board are essential to all good. Also will be found papers and illustrations by the several field men who have been detailed by the Board to make investigations in forestry and render report upon the same for the information and guidance of the public in its forestry conduct. Statements of the work and experiments in forestry at the State Forest Reservation and Experimental Station and the work accomplished by the office are also included, with discussions for the education of the general people in the matter of general and special forestry work and the wisdom of the same.

We express our sincere appreciation of the interest you have manifested in this department and the cause represented by it, and further feel that the subject of forestry and the work accomplished should and is receiving an intelligent and thoughtful observation by the people as a matter of much importance to them in their general interests.

Yours very truly,

FINLEY C. CARSON, President.

WM. H. FREEMAN, Secretary.

Preface

From year to year as the subject of forestry is advanced, in either its general or special features, it is received by the most thoughtful and intellectual persons with a marked degree of interest. At all public or special gatherings for the purpose of advanced consideration of interests largely affecting the general welfare of the State or the Nation no greater consideration is accorded any subject of thought than is given the matter of forests, forestry and their related influences.

It is not an easy thing to assert the magnitude of forestry work in the State because of the lack of definite data and the impossibility to secure the same with the present means and arrangements. Only conservative generalities can now be given. Until a better system of close co-operation in the work of forestry can be arranged between the communities and the Department a definite knowledge cannot be obtained and given out. More funds and men are necessary in order to fully investigate forestry conditions and work in the various communities of the State and render accurate reports upon the same. The funds now provided are inadequate to meet the demands of travel, correspondence, arrangement and distribution of good literature, such as will educate in right forestry conduct, and to conduct the general office with the added expense of superintending the Forest Reservation and Experimental Station. To act and co-operate with the people of every community intelligently is beyond our possibility at the present, but it is asked and hoped such means will be provided the Department as will enable the fullest duty to the subject and the people. At the present a great amount of work is neglected because of insufficient funds.

The experiments in progress at the State Forestry Experimental Station are very satisfactory and are an indisputable evidence against certain opposition to the forestry cause. These certain opposing elements are individual roarbacks and scientific theories. But such an advanced state of forestry experiments is at this time attained that the practicability of forestry upon the cheap broken lands in the State is beyond successful discouragement. The experiments as object lessons of forestry conduct are the most practicable

kind, and the Reservation for this feature alone is a success beyond our own expectations. The Board feels its own good judgment in its plans of object lesson teaching further by the fact that the United States Department of Forestry is now instituting similar experiments upon the National Forest Reserves. The following is from a clipping which conveys the plans:

“Forest experiment stations will soon be established in a number of the National Forest Reserves of the States of the West. These new stations are expected to do the same for the development of the American forests that agricultural experiment stations have done for the improvement of the farms. One of the most important parts of the work will be the maintenance of model forests typical of the region. These areas will furnish the most valuable and instructive object lessons for the public in general.”

This feature of the work by the United States Department was agreed upon this last year and is just now being instituted upon the National Reserves. The State Board planned this course of conduct six years ago and the Forest Reservation and Experimental Station of 2,000 acres in Clark County was purchased and the work begun immediately thereon. This tract of land is a most fitting type of the cheap lands so abundant in southern Indiana and the experimental forestry tracts thereon are also models of practical forestry and have been so pronounced by the best forestry experts from the United States Department sent to view them.

The Board very highly appreciates the efforts of the press in forming a right forestry sentiment, and also that of the various literary and civic clubs which have shown such keen interest in the advancement of the forestry movement. The organization of farmers to the cause of forestry through and by means of the farmers' institute is another splendid factor for good, and the Board sincerely hopes and believes that it is the best instrument of effort throughout the rural communities.

The Board urges a concerted action upon the part of all to aid the forestry spirit to its fullest development because of its vast economic relations.

THE BOARD OF FORESTRY.

Financial Statement

October 1, 1907, to September 30, 1908.

Annual appropriations by the General Assembly, 1907.

1. Office—

Salary of Secretary of Board.....	\$1,800 00
Salary of stenographer of Secretary.....	600 00
Salary of four Board members.....	400 00
Mileage of four Board members.....	71 24

General office expense and mileage of Secretary of Board. 1,000 00

Total \$3,871 24

2. Forest Reservation and Experimental Station..... \$3,000 00

3. Specific—Improvements:

Forest cultivation	\$1,800 00
Field cultivation	900 00

Total specific \$2,700 00

Sum total of appropriations for year..... \$9,571 24

Expenditures.

Office—Salary:

W. H. Freeman, Secretary of Board.....	\$1,800 00
Amy Stoops, stenographer to Secretary.....	300 00
Lucy Townsend, stenographer to Secretary.....	300 00
Finley C. Carson, Board member	100 00
Finley C. Carson, Board member, mileage.....	34 38
Stanley Coulter, Board member	100 00
Stanley Coulter, Board member, mileage.....	14 36
Larkin M. Stultz, Board member,	100 00
Larkin M. Stultz, Board member, mileage.....	9 18
Samuel Burkholder, Board member	100 00
Samuel Burkholder, Board member, mileage.....	13 32

Total \$2,871 24

Office—General expenses:

Traveling and hotel.....	\$290 25
Postage	160 00
Expressage	11 01
Field work investigation.....	362 26
Telephone rents and tolls, office at State House and at Forest Reservation and Experimental Station.	92 60
Supplies	93 88

Total	\$1,010 00
-------------	------------

In this statement there is an expenditure of \$10 in State voucher No. 31 more than for which the State warrant was drawn, and for which no refundment is made to the Secretary of the Board, who paid the items contained in the voucher.

Reservation and Experimental Station Expense—

Equipment—Tools, implements, machinery and fur- nishings	\$777 94
Building and improvement materials—Lumber, hard- ware, cement, brick, sand and gravel.....	475 77
Labor	678 25
General incidentals and management.....	1,068 04

Total	\$3,000 00
-------------	------------

Improvement—Specific	\$2,738 52
----------------------------	------------

Overdraft \$38.52, and same returned to State Treasurer,
Quietus No. 14,682.

Total of all expenditures.....	\$5,971 24
--------------------------------	------------

Receipts from sales at Forest Reservation and Experimental Sta-
tion and remitted to State Treasurer upon recommendation of
State Auditor

\$644 24

Report of Office Work and Suggestions

The things done in forestry by the office the past year were of the same nature as of former years. The efforts were directed towards stimulating systematic practical forestry efforts throughout the agricultural communities of the establishment of farm woodlots, post and timber plantings, and the Arbor Day observances for ornament and shelter purposes. These features received the most emphasis in the richest agricultural sections of the State, where the land is most fertile and valuable for intense farming. Upon the cheap hilly and less productive lands of southern Indiana the extensive commercial forestry features were progressed with a very marked degree of success. This feature of forestry is taking hold upon the people and the owners of hilly forest lands are prizing them highly and giving them attention by cultivation and protection against forest fires and forms of vandalism. Not nearly so much personal attention was given the work in the communities as asked, because the funds were not sufficient to carry out any extended system of investigations and plans for the counties. The correspondence and personal inquiry the past year was far greater than any previous year, and the advice was given by correspondence and conversation at the office instead of personal visits, because of insufficient means to do it. All indications are for a better forestry interest by the masses.

The amount of literature distributed was not as great as in past years. This fact is due solely to the financial penury of the Department. Only such literature was distributed as requested by correspondence, personal calls and through the aid of the presidents of farmers' institutes. By such means more than 3,000 of the annual reports of 1906 and 1907 were given directly to individuals requesting them. The plan of general mailing was not possible, in view of the other plans emphasized by the Board. Most attention was directed to the development of the experiments at the Reservation, in order to show the subject from the objective point of things doing and done, rather than by the plan of abstract exhortation. The amount of forestry literature sent into the State from the United States Department was more than in any former

year; however, it had for its purport more the general conservation of the natural resources and waterways projects.

The plans of education as planned by the Board and to be conducted from the office were more successful than in any former year, and go farther to prove the growth of the forestry movement than was expected. In the district schools a vast amount of work was done by both pupils and teachers. In the high schools throughout Indiana a splendidly organized study was carried on, both by the instructors and the pupils. This splendid educational grounding can but lead to one end, the success of the forestry cause, because the hope lies most surely in the right education of the coming generations to the principles and cause therefor.

The many literary organizations everywhere have assisted very much in the educational crusade. In all their meetings and courses of reading forestry has been given a very prominent recognition. The lecture plan was continued before civic organizations of every kind, and also before commercial and agricultural assemblages. The Board has insisted that education is the one hope for the successful establishment of forestry, and has acted accordingly.

As much attention as possible was given individual forest plantings and cultivations. Only a meagre effort was extended applicants for help in this feature for lack of means to do it. Not a community in the State can be found but has forestry work in progress, but the exact extent and nature is not known. Following are a few descriptions of individual plantings that were secured in a casual manner in connection with the other lines of forestry work. Thousands of efforts in forestry are in progress, but no means is at hand to secure the data and render complete report on them or to afford the personal supervision and direction asked by those making the efforts and asking for visits and personal advice.

There is no doubt in the minds of the people as concerns the merit and necessity for a strenuous forestry conduct. There are doubts in the individual minds as to the processes they should follow. So long as the Department is penuriously equipped with men and money to completely investigate and render the desired advice and assistance, just that long will the forestry cause be hindered and the people defeated in their wishes and desires. Good systematic organized effort must be secured in every community in the State. Good men must be obtained to do the investigating and render the advice. To get men means they must be paid as much as their services are worth. Good efforts by good men and good support to carry forward the work in every locality will result in

good forestry conduct, and consequently general good to all mankind and his institutions. One man cannot do all the work. The Secretary of the Board, in addition to the actual office duties, is Superintendent of the Forest Reservation and Experimental Station in Clark County. He should have at least two good capable assistants and means to accomplish the aims sought.

In addition to the individual plantings investigated, a study of the Wabash River region was made. The purposes are fully set forth in the report rendered, as is also the topics of investigation. No further explanation of this work will be given. A perusal of the full report will reveal the aims and results of the investigation. This feature of the work was undertaken to determine facts in accord with the present popular agitation, the waterways movement. The report is herewith submitted.

INFLUENCE OF DEFORESTATION ALONG THE WABASH RIVER.

FRED A. MILLER, Purdue. E. E. DAVIS, Wabash.

INTRODUCTION.

It is now generally admitted that there is a relation between forests and stream flow. To the existence of this relation, however, it must be understood that the forest is an expanse of trees sufficiently dense to form an unbroken canopy of tops, and not a scattered growth of trees and shrubs. It must also be remembered that there are many modifying influences which may cause a wide variance in this relation. This fact has been developed in recent investigations and it is now understood that geological, topographical, hydrographical, climatic, and soil conditions must be considered before all fluctuations in a river system can be explained. The cutting away of the forests from the drainage basin of any river is only one factor in determining the character of the run-off. It has been stated that the geological formations of a region may be of such a nature that the cutting off of the timber would not appreciably affect the water supply of the stream in that region. On the other hand it may be such, that destructive lumbering would cause a diminution in water level, and in some cases an actual drying up of the stream for certain months of the year. Examples of this last phenomenon are not uncommon in the United States, and even in Indiana there is evidence of failing springs and a lowering

of the underground water level, which can be partially explained by deforestation.

The earlier work upon this subject was largely a recording of opinions, and even now experimentation and recording of accurate measurements are in an early stage of development. This is not surprising when it is remembered that comparative data is difficult to obtain where there is such a wide difference between the various river systems as is found in this country. Sufficient investigations have been carried on, however, to establish the existence of this relation between forests and stream flow beyond any doubtful stage, and although the majority of these investigations have been conducted in European countries, some measurements have been made on streams in the United States.

Much has been said in this State concerning the cutting away of the forests and the consequent effect upon stream flow. These statements, many times exaggerated and without reasonable foundation, have caused no little uneasiness and much speculation on the part of many. People, and especially farmers, living in close proximity to streams, have experienced an annual loss because they have not understood the nature of the problem at hand. Advice, which has been based largely upon theory, has been given by many and followed by few. The experiments performed by individuals have in most cases never been recorded, and observations by the United States Weather Bureau, which cover a period of not longer than thirteen years, have never been summarized. This condition of affairs suggested to the board of directors of the State Department of Forestry the beginning of a series of observations upon the waterways of the State for the purpose of determining the local effects of deforestation upon stream flow.

The investigations were begun at Bluffton, Wells County, Indiana, and continued as far as Vincennes. The Wabash River was traversed between these two points by canoe, except between Markle and Peru, where the river was found to be too shallow for canoe navigation. Observations were made and photographs taken at all important points along the river course. Along the upper Wabash old inhabitants were the only source of information concerning the early conditions of the river, and but little data of a reliable nature could be obtained. However, when Logansport, Delphi, Lafayette, and Terre Haute were reached, information of a more authentic nature was obtained from city engineers, steamboat pilots and captains, ferrymen and others. County records and editorial files were also examined and found to contain interesting and

valuable articles. Lastly, and largely for corroborative purposes, government and State publications were thoroughly reviewed. All observations were made on a comparative basis and the object in view was to compare the present river conditions, now that the forests are practically removed, with those of fifty years ago when the forests of the State were in a primitive condition.

DRAINAGE BASIN AND STREAM BED.

The drainage basin of the Wabash River embraces an area of 33,000 square miles. Of the total number, 24,350 square miles are within the border of Indiana. This is slightly more than two-thirds the area of the State, the total area being 35,910 square miles. Of the portion in Indiana, about one-half is embraced in the drainage areas of the East and West White Rivers.

*“The valley occupied by the Wabash River has not had a uniform development from source to mouth. In its upper part, from the source to Huntington, the valley has been entirely formed by the present stream and is a narrow shallow trench.” The channel is still comparatively narrow, figures 2 and 3, and for the most part through Niagara and Clinton Limestone. “At Huntington the river enters the old westward outlet of a glacial lake that occupies part of the basin of Lake Erie, and which has a valley several times as large as that occupied by the Wabash above this point. This old lake outlet opened a new or post-glacial line of drainage in its westward course across Indiana, except for a few miles in the vicinity of Lafayette, where it courses or follows a preglacial valley for a few miles. It has been compelled to do considerable excavating in rock from Huntington down as far as Covington, and still carries rapids at several points. Below Covington the stream follows very nearly the line of a partially filled preglacial valley, and its work has been largely the removal of a portion of the glacial deposits left in that valley. It makes some deflections, however, into the edges of the uplands, cutting off points of the bluffs. At such places the channel is occasionally in process of excavating rock. The cause of these deflections is not in all cases clear.”

The condition of the stream bed, with the exception of a few local and periodical changes, is practically the same as it was fifty years ago. Changes affecting any stream bed are exceedingly slow and are dependent largely upon the character of the geological formations. From Bluffton to Huntington, as was stated before, the river has cut its channel through a solid outcropping of stone.

*Eighteenth Annual Report of the U. S. geological survey.

Fig. 2. View of Wabash River at Bluffton, Indiana, showing the shallow, narrow channel.

and any changes which may have taken place are very slight. No apparent change is noted in the character of the bed until Wabash is reached. At this point the native rock assumes the character of the hard flint, which is replaced further down the stream by shale and limestone. From Delphi, although the underlying strata as far as Lafayette is a continuation of the rock formation found above, no outcropping was observed and the river bed is composed of shifting sand and gravel. Sandbars become more numerous at this point and often extend in their characteristic delta formation almost across the channel. Perpendicular banks of clay and sand are more frequent in the vicinity of Lafayette, figures 4 and 5, and washing of banks on one side and the formation of sand and gravel bars on the other is not an uncommon occurrence, figure 6. Though a more rapid shifting of the channel and a more frequent formation of bars are found, there is no evidence pointing to a change in the nature of the bed, during the last half century.

From Lafayette the coal regions are soon reached and frequent outcroppings of the characteristic strata were often noted in close proximity to the river banks. This formation extends in a comparatively wide strip along the remaining course of the Wabash River. No marked differences or peculiarities occur except the frequent admixtures of conglomerate which are found after passing Terre Haute.

As a whole, the distance covered did not show any marked evidences of change in the condition of the stream bed over those of fifty years ago. The river along its extreme upper course was found clearer of drift and snags, while below Lafayette these were found to be more numerous. The government snag boats which once plied between the mouth of the river and points as far north as Terre Haute, have done no work for several years, with the result that the channel has gradually accumulated much drift. Figure 7. On the other hand the clearing up and ditching of the northern portion of the State has left the channel quite clear. The cutting away of timber has gone on as rapidly in the southern part of the State, especially along the river, but the tendency here has been more towards a rapid washing of the banks and a more frequent formation of sandbars. It is said by steamboat captains and pilots that during early steamboat navigation, which for certain seasons of the year extended as far as Delphi, a channel was left open through these bars by the motion of the boat's wheel. The practical value of this last statement cannot be stated from actual observations, and can be given only passing notice at this time.

COMPARATIVE FOREST AREAS.

Accurate figures covering the comparative forest area of the State have been difficult to obtain. Notwithstanding this fact it is readily admitted that the amount of standing timber now remaining within the State is exceedingly small. The larger amount remains in the southern hill counties, where the difficulty of removing it has been one of the principal reasons for its preservation. The northern and central counties, through which the chief rivers of the State pass, have retained but very little timber land, and this now exists in the form of open pastures and small wood lots. Little has been done to increase this amount by planting on waste lands, and the consequent rapid decrease has steadily continued.

* As given by the latest tabulated report only 3,838,042 acres of timber land, including wood pastures, remain standing within the State. The total area of the State is 23,260,000 acres, which places an approximation upon remaining timber land of Indiana at fifteen per cent. of the total area. Approximating further upon a basis of the investigations along the Wabash River, the percentage should be lower along the principal river courses. The amount of timber now standing along stream banks, together with its character and quality, is hardly worthy of consideration. Throughout the entire distance of three hundred and fifty miles traveled along the Wabash, but few first-class wood lots were found. The prevailing scene is open pasture, cultivated fields and bare river banks. Only where the persistent willow, cottonwood, and sycamore could gain a foothold is there any evidence of a forest covering or a protection for the river banks. Figures 8 and 9. A few elm, linden, maple, ash, and hackberry, also find a poor existence possible until the undermining force of the water loosens their less retentive roots and they are swept away to form choking drifts and troublesome snags in the channel below.

ANNUAL RAINFALL.

As shown by the accompanying chart, the annual precipitation has not changed during the last thirty years. The chart prepared by Mr. W. T. Blythe, sectional director of the U. S. Weather Station at Indianapolis, Indiana, gives the complete records of rainfall since the establishment of the weather bureau at this point. At present there is considerable difference of opinion upon the subject of forest and its influence upon rainfall. It was long believed that because rainfall was most abundant where forests grew, forests

*Report of Department of Statistics, 1901.

Fig 8. View showing river bank protected from washing by growth of trees.

Fig. 9. View showing the willow to be the most useful tree in preventing erosion of river bank.

were exerting an important influence on the amount of precipitation. A more reasonable inference, however, quoting from forest experts, is that rainfall is the great factor in controlling the distribution and density of forests. In this connection it may be said that forests of the true type do not occur in the United States where the mean annual precipitation falls below eighteen and twenty inches, except on restricted areas where unusual conditions prevail. European nations have taken the lead in the number and extent of observations upon this problem of rainfall, and it is still claimed that the data is so conflicting that a definite answer is not possible.

NOTE—Bold-faced figures denote greatest and least monthly and annual values.

VARIATIONS IN STREAM FLOW.

Records of water levels on the Wabash River have been kept by the United States Weather Bureau at Mt. Carmel, Illinois, only for the past thirteen years. Earlier occasional measurements of annual maximum levels were recorded, but no monthly mean levels were taken. Thirteen years ago forest conditions in Indiana were practically the same as at the present time, which fact renders these records worthless for comparative purposes. They have been utilized, however, together with those upon precipitation, in constructing the curves in figure 10. These show the monthly fluctuations in the river and the relation between precipitation and variation in water level. It has been said by authorities that the amount of precipitation and the height of rivers is not proportional. It is seen here, however, that a fairly constant relation exists between the amount of precipitation and the river height from November to June, while for the remainder of the year no relation exists. Measurements of highest water levels were obtained at Terre Haute which shows that the high water mark has remained practically constant since 1828. Figure 11.

The variations in stream flow, and especially the constancy of this flow has been found to be more dependent upon the distribution of the available water supply than upon the actual quantity of the supply itself. This supply, which divides itself naturally into superficial run-off and underground drainage, affects the flow of streams in two ways. The superficial or surface run-off gives to the stream its excessive fluctuations and periodic overflows, while the underground drainage gives to it its permanent condition or constancy.

It is the regulation of this supply, therefore, which is to determine the variation and degree of constancy in the flow of streams. That the forest is one of the important factors in regulating this supply there is no longer any doubt. This fact has been confirmed by recent investigations and in Indiana, where it has been shown that the mean annual rainfall has not decreased in amount during the last thirty-six years, it has been found that the streams are less constant than they were fifty years ago, when the forests of the State were in their original condition. The Wabash River rises and falls more rapidly now than it formerly did, and a height that was only attained after a lapse of two or three weeks, at that time, is now reached within as many days. After a maximum height is once reached the subsidence is equally rapid. In connection with

this sudden rise and fall of the river it has been said that the number of freshets throughout the year is greater now than it was fifty years ago. With regard to this statement, however, the authorities of the United States Weather Bureau say that there is still a difference of opinion and that the matter is now the subject of a special investigation which will be reported upon later by the National Conservation Commission. The evidence collected along the Wabash River points to an increased number of freshets, but this evidence was of such a nature that its real scientific value is doubtful.

The problem, then, of variations in stream flow resolves itself into one of conservation of water supply. The forest, as stated before, has been found to be one active agent in this work of conservation and since primitive time has been one of nature's methods of furnishing the streams with a constant and regular supply of water. The degree to which the forest controls this supply is of course dependent upon the density of the forest cover as well as upon the extent and area of the catchment basin, together with climatic, topographical, and geological conditions. How important a part geological formations may play in this question of water supply may be suggested by the following quotation which was taken from a report by the secretary of agriculture in relation to the forests, rivers and mountains of the southern Appalachian region. "In studying the streams of the more northern states it seems that the numerous lakes and the deposits of sand and gravel spread over the hills and valleys of that region by the glaciers serve to store the water and to preserve the uniformity in the flow of the streams, and would accomplish much in this direction, even were the forests in that region entirely removed. In this southern region the preservation of the soil and the stream is a task which the forests alone must accomplish, and to that end they must be effectively protected." It is now a well-known fact that the greater part of Indiana was once covered by the northern ice sheet or glacier, which dredged out extensive areas at one place by its shearing and erosive force, while it built up at another by depositing the accumulation of drifts as terminal and lateral moraines. Evidences of the first are found in the northern portion of the State, which is dotted with glacial lakes and traversed by slow streams and extensive swamps of the same origin, while the locations of the latter are marked by glacial boulders which lie scattered about over various parts of the State.

For the above reason it would not be expected to find the rivers of Indiana showing such variations and changes due to deforestation.

tion as are found in mountainous regions where the character of the geological formations differ from those of glaciated regions. However, the cutting away of the forest cover from the head waters of the principal streams of the State has had an appreciable effect upon the character of the overflow of these streams. The manner in which the forest acts in regulating this water supply has been thoroughly discussed in several government publications and its treatment here will be brief.

For convenience of discussion the forest cover may be divided into forest canopy and forest floor. With each of these divisions the action upon the rainfall is purely a mechanical one. The forest canopy retards evaporation from the soil, breaks the force of the rain, and allows it to reach the ground more slowly and in a more finely divided state, which permits of a ready and complete absorption by the forest floor. It is well known that a slowly falling rain, even on a naked soil, is all taken up, while a heavy downpour, falling on the same soil, largely escapes as surface run-off. In the first place, each separate drop of rain has time to be absorbed by the soil, while in the latter the accumulation of drops is too rapid to allow such complete absorption. This accumulation which would have been largely obtained had there been a covering of trees, now runs off to lower levels and the future supply of water at this point is decreased. Next in importance to the forest canopy in lessening this run-off is the forest floor.

The forest floor or layer of humus is no more than an accumulation of dead tree trunks, branches, bark, twigs, and leaves in a natural state of decomposition, forms a perfect absorptive surface for the rainfall. It is loose, porous and retentive, and in old forests often forms a layer several feet in thickness. The rain first checked in its descent and broken up into smaller drops by the overhanging canopy of branches, twigs, and leaves, is taken up readily and retained in large quantities by the permeable spongy layer of humus. Even when the rainfall is abnormal and the accumulation on the ground great, the run-off is intercepted by this uneven covering of debris and held back until most or all of it sinks beneath the surface. After the water once sinks beneath the surface soil it enters the interstices of the subsoil and the open channels formed by the roots of trees and shrubs, adding to the supply of deep seepage. It is this deep seepage which maintains the constancy of stream flow and any increase or decrease in the amount of this seepage, as well as that of surface run-off, will be noticeable in the annual fluctuation.

tuations of the river. Measurements have been made in this country to show the true relation of the forest to constancy and periodic variations in stream flow, and the following is a review of some of these measurements: **"How active a part is played by the forest in regulating the run-off is clearly shown by actual measurements of the flow of streams which drain forested and unforested watersheds. A typical illustration of streams from barren, treeless watersheds may be found in the flow of Queen Creek, in Arizona. This stream discharges only in violent freshets, recurring usually as great flood-waves which subside almost as soon as they arise. The area of the drainage basin is 143 square miles, of which 61 per cent. is above an elevation of 3,000 feet. The rainfall is estimated to be about 15 inches. The maximum flood discharge of Queen Creek in 1896 was 9,000 cubic feet per second, and the mean discharge was 15 cubic feet per second; during a large portion of the year the stream was entirely dry."*

"Cedar Creek, in Washington, is typical of streams flowing from timbered watersheds. The basin of Cedar Creek lies on the western slope of the Cascade Mountains, and is covered with a dense forest and a very heavy undergrowth of ferns and moss. The drainage area is the same as that of Queen Creek, 143 square miles. The precipitation for the year 1897 was about 93 inches for the lower portion of the basin, and probably 150 inches on the mountain summits; in spite, however, of the fact that the precipitation in Cedar Creek basin was from six to nine times more than that in Queen Creek basin, the maximum flood discharge of Cedar Creek for 1897 was but 3,601 cubic feet per second, as against the 9,000 cubic feet of Queen Creek. On the other hand the flow of Cedar Creek was continuous throughout the year, and the minimum discharge was never less than 27 per cent. of the mean for the year. The mean discharge for Cedar Creek was 1,089 cubic feet, as against 15 feet for Queen Creek. This radical difference between the behavior of the two streams can be explained only by the difference in the soil cover of the two basins. Cedar Creek basin is covered with a heavy forest, while Queen Creek basin is almost entirely bare, with but a few scattered pinion trees and a little brash or grass." This excellent illustration of the effects of deforestation upon violent freshets and constancy of stream flow is considered of more value than any amount of theoretical discussion. It demonstrates beyond doubt the practical nature of the problem and gives to it the stamp of scientific accuracy. In speaking of the practica-

*United States Geological Survey, Eighteenth Annual Report. Part 4, Hydrography.

bility of the problem, its relation to navigation should receive brief mention.

With the constancy of small navigable streams decreasing and their flood periods gradually becoming of shorter duration, navigation must consequently be injured. Fifty and sixty years ago the flood periods on the Wabash River were of long enough duration to allow regular steamboat traffic as far as Delphi until the month of April. Press announcement of the arrivals and departures of steamboats were even found for Logansport, and history records the successful visit of one steamer to old Chief Godfroy's Village, situated near the mouth of the Mississinewa River, a point only a few miles above Peru. Now, however, this same volume of water, which was then held back by dense forests and maintained a flood stage of sufficient duration to permit of such navigation, rushes swiftly into the river from cleared fields and bare slopes, through extensive systems of surface drainage, causing a rapid rise and fall of the river in its passage to lower levels.

The following records from early newspapers will give some idea of the extent of early navigation on the upper Wabash.

ARTICLES TAKEN FROM THE DELPHI ORACLE.

Advertisement, December 15, 1837. "The new and substantial, fast running, light draught steamboat, Logansport, will ply between Cincinnati and Logansport, as a regular packet, all the ensuing spring, touching at the various points on the Wabash River. The Logansport has superior accommodations for freight and passengers."

Arrival and departure of steamboats, Port of Delphi:
March 29, 1837.

"Steamboat Saline, departed from Delphi for Salt Works."

April 13, 1838.

"Steamboat, Logansport, from Cincinnati; left same day for Logansport and arrived on same day from Logansport, and left same day for Cincinnati."

April 26, 1838.

"Steamboat, Rochester, from Cincinnati, left same day for Louisville."

Other press records were received at Covington, Indiana, which indicate that exceptionally low water stages were experienced as early as 1853. Such evidence, together with other data, leads to

the statement previously made, that the greatest change the Wabash River has undergone as a consequence of deforestation has been in a shortening of the flood periods and not in an appreciable decrease in the total discharge of the river.

The following items appeared in the "Covington Friend," published at Covington, Indiana, on the corresponding dates:

January 19, 1850.

"The river is free from ice, in fine order for navigation and rising. Two or three steamers have passed up."

February 9, 1850.

"Until Thursday night this week, ice closed the river; it then 'flushed out,' and during the succeeding day, from above, came down with a rushing din. Now the Wabash coast is clear and the channel ditto, with water in it sufficient for steamboat navigation."

March 9, 1850.

"The Wabash is high over the bottoms and rising. Steamboat trade was never so brisk."

November 20, 1852.

"The steamer, Julia Ann, passed up on Thursday morning. She is light draught and intended for the upper Wabash trade. The river is in fair stage."

November 25, 1852. Advertisement.

"The regular packet, Julia Ann, leaves Terre Haute on Thursday and Friday at 7:00 a. m., immediately after the arrival of the cars, and reaches Covington at 9:00 of the same morning following. She leaves Lafayette on Monday and Thursday at 8:00 a. m., and reaches Covington at 5:00 p. m. of same days. She is new and light draught, built especially for the Wabash trade."

April 16, 1853.

"The Wabash, because of low water, is useless. Even the little Phillips and Julia Ann are compelled to lay up. Several steamers are grounded below, laden with merchandise."

April 23, 1853.

"A slight rise in the river is very fortunate for merchants and steamboat owners. Steamers pass almost every hour."

April 3, 1861.

"The river is still very high, but falling. It was within three feet of being up to high water mark. We see the steamboat, Samuel Orr, is advertised to leave Cincinnati today for the Wabash River."

About this time the Wabash and Erie Canal was put in operation and its influence upon river navigation in changing the trend of trade from the south to the north was considerable. The following appeared July 5, 1861, in the above mentioned papers: "The canal packet, Little Dixie, leaves Attica daily, immediately after the arrival of the trains from the East, for Covington and all immediate points, and leaves Covington at 2:20 for Attica."

May 1, 1867. (Same paper.)

"The steamer Romeo is making regular trips between Covington and Terre Haute."

March 18, 1868.

"We learn that the steamer Romeo, on her way up from Hutsonville, struck a snag just below York, and sunk. She had a load of 600 barrels of pork, but was run close to shore and the freight was removed."

Later records of regular navigation on the Wabash River could not be found.

DAMAGE BY RIVER.

It has been found that the character and extent of the damage done by the Wabash River throughout the extent of its course investigated is not as serious as is generally believed. The character of these damages is largely a washing away of fences and farm crops, tearing out of wagon roads and railways, and the breaking of river levees. The damage from fences is not considered, while that resulting from loss of farm crops is largely due to a retardation in the time of planting. However, this loss of crops is largely compensated for by the enrichment of the land by deposition of silt. The tearing out of the wagon roads and railways is due to insufficient protection of grades, wrong materials and poor construction, while the breaking of levees results from similar causes. The breaking of levees (figure 12) is perhaps the worst form of damage done by the river, for the reason that the principles underlying its proper construction will often alleviate the danger from other sources when properly introduced. For this reason it is deemed advisable to include a discussion upon the proper construction of levees.

"In selecting a route for a levee, care should be taken to locate on suitable ground where there is sufficient room for borrow pits on the river side, to keep a foreshore of timber between the location and open water, to cross sloughs and old channels by the shortest

Fig. 12. View of break in Wabash River levee.

courses, and to avoid places where the levee would be exposed to erosion by currents or waves.”*

“The height should be not less than three feet above high-water mark. This is necessary to prevent overtopping of the levee by waves by an unexpected rise in the flood plains, or by the lowering of the crown by the crossing of animals, erosion,” etc.

“The injurious effects of waves and currents are materially decreased as the slopes (of the levee) are flattened and of burrowing animals as the area of the cross section is increased. A flat slope is cheaply maintained, as grass grows over it more readily.”

“After a levee is completed the slopes should be smoothed off and sown in grass. In latitudes where it will grow, Bermuda is the best, as it makes a thick sod and grows readily on slopes. In other latitudes a mixture of bluegrass and redtop gives better service.” All of these grasses grow in this latitude. “The bluegrass will grow on the upper part of the slopes and the crown, while the redtop will grow on the berm and borrow pits. These grasses make a tougher and better sod than any other tame varieties.”

“On the completion of a levee efficient measures should immediately be taken for its maintenance. One of the first features to be looked after is the protection of the slopes from high water, currents and waves. When there is a foreshore of thick-growing timber there will not be much trouble from this source. Thick, small timber which will not bend before the force of the waves, is better than large timber, as it breaks up the waves more effectually. Where there is no native timber a good protection can soon be secured by planting of willows, maples and cottonwood in and along the borrow pit (see diagram figure 13). No timber should be allowed nearer the slopes than 20 feet, as the roots will penetrate the base of the levee and when they decay will cause seepage. Occasionally a green root will cause seepage of water under pressure.”

“Another protection to the levee slope is a crossing of tough sod, which retards erosion occasioned by rain storms, currents, and waves. The vegetable growth on the levee, and on the slopes of each side should be kept cut, since weeds growing and decaying on the slopes loosen the surface. Bushes also keep the surface loose and increase the danger of injury by waves and currents. Any neglected growth over the levee affords protection to burrowing animals, making it difficult for hunters to locate them. Another method of protecting the slopes which is lasting but expensive, is

a revetment of rock 6 to 10 inches thick laid over the exposed slopes."

LAND EROSION.

Land erosion along streams may be divided into two classes; first, that which affects the river banks; and, second, that which affects the hills and slopes which form the river valley. The extent of this erosion along streams is dependent upon a complication of conditions, the more important of which are: nature of the river currents, density and character of soil covering, climatic variations, texture of surface soil, and the nature and abundance of rock formations.

Along the upper Wabash, extending as far down the river as Delphi, there was little evidence of erosion along the banks. The reason of this is the rocky character of the channel from Bluffton to this point. For the greater part of this distance the river has cut its channel through solid rock, which resists to a degree the action of erosive agents.

Farther down the river, however, the banks are composed largely of layers of loam, sand and gravel, and the action of the currents and waves on these is considerable. Every year acres of land are washed from one field, only to be carried down the river and deposited on another. The light soil particles make up the silt deposits of these lower fields, while the heavier sand and gravel is deposited where the first break occurs in the current. This usually happens at a bend in the river and at these points extensive bars are constantly forming. At first they are composed entirely of sand and gravel and are void of vegetable growth. Gradually, however, there is an accumulation of soil near the original bank of the river and various forms of resistant herbs, together with willows, cottonwood, maple and sycamore reclaim the bars to fertile conditions. Figure 14.

Different conditions are found on the hills and slopes bordering the river and the effects of erosion are about the same throughout the extent of the territory investigated. In most cases these hills and slopes have been stripped of all tree growth and are only dependent upon a covering of bluegrass or other straggling herbage to resist destructive erosion. At points where the slope is not too great, and where the land is not too heavily pastured, this covering of bluegrass, if it be sufficiently heavy and luxuriant, will prevent erosion and hold the soil in place during excessive rainfall. On steep hillsides, however, this covering of sod will not suffice and a stronger, more effective covering is necessary to prevent a rapid

Fig. 14. The strip of land lying to the left of the wagon road has been reclaimed by vegetation.

washing away of the soil and a consequent formation of deep gullies. Figures 15 and 16, taken along the canal near Fairview Park, Indianapolis, Indiana, show the effect of continued hillside erosion. This example is only one of hundreds of such which may be found in the State. For years this hillside has been washing and caving backward, gradually infringing upon one of the most beautiful as well as most useful sections of the park, yet no efforts have been made to check its recession. Nature alone has worked incessantly in an effort to establish some growth upon the more gradual slopes, but the bare surface of hard stony clay, which offers poor conditions for germination and growth, has prevented any interruption of erosive action.

A heavy growth of trees has been found most effective in preventing erosion on slopes and steep hillsides. However, it is not to be understood that no timber can be safely removed from such places. There are methods of partially clearing hilly land which, when properly carried out, permit of a safe cutting away of the timber, and even allow a large per cent. of the acreage to be brought under cultivation. The most effective of these systems, especially where the land is desired for cultivation, is that of terracing, figure 13. This system of hillside cultivation generally employed to prevent washing, consists of a series of small ridges constructed across the slope on contour lines at intervals, the width of which must depend upon the degree of the slope. **"These ridges are sometimes placed as close together as 20 feet, and as the ridges are at least 4 feet in width, 16 per cent. of the land is thus occupied. The object in this construction is to retain the rainfall until it can pass into the soil by slow percolation. In some cases the trench on the upper side of the terrace is given a gentle grade for the purpose of leading an accumulated volume of water to some point where it can be taken to the stream at the foot of the slope. Often instead of a ridge or dike being made for the retention of the surface water, the terrace is made level and seeded to meadow grass, which is mowed for hay each season. The effect of a terrace of this kind is to check the flow of water and cause such a part of it as is not absorbed by the soil to pass to the next tier of land without concentration. The growing grass in summer and its stubble in winter serve to arrest the soil matter suspended in the water."* Many times owners of these hill lands wish to remove the timber without cultivating the cleared space. This may be done safely by cutting the timber from strips instead of removing it from the entire slope at one time.

*Annual Report of Irrigation and Drainage Investigations, 1904.

Fig. 15. An extreme case of land erosion which could be prevented by tree planting.

These strips should follow the same general plan as the terraces, their width always depending upon the steepness of the slope. Between such cleared strips there remains a belt of standing timber of equal width which should never be cut until reproduction is well established upon the cleared spaces.

Fig. 16. View of excessive land erosion.

CONCLUSIONS.

The various ways in which the forest may exert a modifying influence on stream flow have been dealt with and in most cases sufficient conclusions have been reached under the general headings. The following, however, is necessary in connection with the investigations. So far as could be determined, the actual volume of the Wabash River is as great now as it was fifty years ago. Maximum and minimum records of water level are practically the same and the conditions of the stream bed, except for a more rapid formation of bars throughout the lower course, has not undergone great change.

The forests have been completely removed from the entire region investigated and the banks of the river are only dotted here and there with scattered wood lots and clumps of cottonwood and willows. With this protective covering removed the clay banks of lower sections of the river shift rapidly. The shifting is now increased by the sudden rise and fall during freshets, which, though of longer duration in early years, had their force broken by the forest cover along the banks.

This decrease in the duration of freshets has been found to be the greatest change which the river has undergone on account of deforestation. The lakes of northern Indiana, together with large areas of swamp land, extensive deposits of sand and gravel, act as conservative reservoirs to the unchanged amount of rainfall, thus furnishing a constant overflow to several streams. On the other hand, during seasons of exceptional precipitation, the modifying influence and conserving power of the once extensive forests are no longer felt. At such time the increased surface run-off forms the short, sudden freshet of today.

In this manner deforestation about the head waters and along the lower course of the Wabash River has caused a lessening in the duration of flood periods and a consequent decrease in navigability; bars form across the channel more quickly now on account of the large amount of material brought down from cleared and cultivated fields; clay banks wash rapidly since the cutting away of trees in close proximity to the stream, and the channel which was once held firmly by these trees is now shifting its course continually.

FOREST PLANTINGS IN INDIANA.

E. E. DAVIS.

The number of forest plantations in Indiana has increased quite rapidly in the past few years and shows that a practical interest is being taken in the work. It is particularly gratifying to find that the landowners in the southern part of the State are taking hold of forestry, because it is here that thousands of acres of hilly land, covered with poor soil, are found which in many cases has eroded so as to be unfit for agricultural purposes.

Many of these plantations at first consist of only a small experimental plant, but in some cases the acreage of this is increased year by year. Sometimes, however, one is unfortunate in the selection of a species, which is either unsuited for growth on the site selected, or is a prey to some insect pest or fungous growth. When this is the case poor results usually follow and further attempts are discouraged.

After the site has been chosen for a plantation, it is of the utmost importance that only species suitable for growth on this particular situation should be selected. Elevation, soil, drainage and depth of water-table are to be considered, and where a planting of mixed species is desired, only these which are adapted to grow with one another should be chosen. One should also be careful to choose for planting the species which when mature will best serve the purpose in mind.

It is a mistake to make large, pure stand plantings of some species in those sections where destructive pests are certain to attack the plantation, for in many cases a mixed stand serves as a check on these pests. For instance, several pure stand black locust (*Robinia pseudacacia*) plantations in the State have been almost completely destroyed by the locust borer (*Cyrtene robinia*), which does not work on other species in mixed stand with the black locust.

The Forest-planting leaflets, issued free by the United States Forest Service, and several of which are reprinted in the annual report of the State Board of Forestry for 1907, are recommended to prospective planters for information as to the proper species to plant.

Fig. 2. Row of *Catalpa speciosa*, planted along the highway by Mr. Tilson, intended for use as live fence posts.

CATALPA PLANTING.

Mr. S. M. Tilson, living four miles west of Greenwood, Johnson County, Indiana, has been quite successful in his experiment of growing the hardy catalpa (*Catalpa speciosa*) along fence rows for live posts. The trees were spaced thirty feet apart and were set along most of the fences on the farm. They calliper from eleven to sixteen inches in diameter at breast height, and average about thirteen inches. The clear length of stem averages only about eight feet, which is due to topping the seedlings when four years old. This removed the terminal bud and prevented further height growth, but probably hastened the diameter growth. The living trees are utilized for posts and those first used were injured by nailing the fencing directly to the tree, which would overgrow the wire (Fig. 2). Mr. Tilson found a remedy for this by fastening the fence to each tree with two $\frac{1}{2}$ -inch x 12-inch iron spikes, which were left to protrude six or eight inches to allow for growth of the tree. The spikes were driven into holes which were bored near the ground and at the height of the fence respectively, so that only the bottom and top of the woven wire fencing is fastened to hooks on the end of the spikes, and in this manner is kept from touching the bole of the tree.

The trees, which number about 500, were grown from seeds gathered by Mr. Tilson and sown in the spring of 1889. The following spring the seedlings were transplanted to nursery, where they were left for two years, when they were set in their permanent positions. In the early spring of the next year the trees were pruned and topped, but since then no further attention has been given them, except the occasional pruning of a low branch.

It was a mistake to top these trees, since a much greater height growth could have been obtained with a correspondingly greater number of posts to the tree if this had not been done. (See Fig. 3 for example of tree not topped.) The soil here is mostly upland clay, and therefore is not the most favorable for the growth of the catapla, but these trees have done quite well.

MIXED PLANTING.

Mr. Nicholas Volz, of Morris, Ripley County, Indiana, has $4\frac{1}{2}$ miles south of town an 80-acre forest reservation and plantation consisting of 20 acres woodlot, 50 acres of plantings and about 10 acres of cleared land, which will be planted in seedlings later.

One hundred and ten thousand black locust (*Robinia pseudo-*

Fig. 3. *Catalpa speciosa* used for live fence posts on farm of Mr. Tilson, near Greenwood, Ind.

caria), 5,000 hardy catalpa (*Catalpa speciosa*), 2,000 black walnut (*Juglans nigra*), and 1,000 Russian mulberry (*Morus alba tatarica*) seedlings have been planted since the spring of 1906, at which time about 18 acres were planted. In the spring of 1907 this was increased to 40 acres, which was again enlarged last spring (1908) to 50 acres.

The plantation is situated in rough land with poor clay soil, much eroded and unfit for cultivation. The catalpa is unsuited for both this type of land and soil, as proven by the seedlings planted three years ago, and which have made scarcely any perceptible growth.

The black locust seedlings are doing well for trees which have had little or no cultivation, and those in the hollows have made better growth than the ones on the hills. The locust borer has not yet begun work on this plantation, but it is working in the vicinity. One small plantation of four-year-old black locust near Morris has almost every tree infested with this pest, so that the plantation is now absolutely worthless.

The black walnut and Russian mulberry have been planted here and there over the plantation, and some are doing nicely.

Mr. Andy Bauman, two miles southwest of Lake, Spencer County, Indiana, has a small hardy catalpa plantation in which one-half acre of seedlings were set, spaced 6 x 8 feet, in the spring of 1903. These trees now average three inches in diameter at breast height. In the spring of 1904 one acre of seedlings were set adjoining the small plat spaced 6 x 5 feet, and they now average only one and one-half inches in diameter. None of the three has been cut back and the great difference in growth is only partially due to the difference in spacing, as the trees first planted are on richer and moister soil.

Many of the trees in this plantation would be straighter if they had been cut back during the second year, and the growth would be greater where the spacing is close. Cutting back also lessens the need for artificial pruning.

Mr. Bauman has set a number of black locust around the farm-yard for shade, and one tree now nine years old measures 23 inches in diameter at the butt and 18 inches at breast height. (Fig. 5).

Mr. R. L. McCoy, two and one-half miles southwest of Lake, Spencer County, Indiana, has a one-acre plantation of black locust, two years old. The trees average about 2½ inches in diameter and run to 20 feet in height. They are set 8 x 8 feet and are on rich soil. Although all of the trees are of the same age, those which

were transplanted directly from the seed-bed to the plantation have made a much better growth than those which were heeled in (set in a nursery) before being planted.

Fig. 5. A nine-year-old Black Locust tree on the farm of Andy Bauman, Lake, Spencer County, Indiana. Tree 18 inches in diameter at breast height.

Mr. McCoy also raises black locust nursery stock for sale. Eighteen acres were sown to seed in rows 24 inches apart last May and June, and the seedlings now (the last of August) run up to 24 inches in height and show evidence of careful cultivation.

There are a great many in this vicinity who are putting in black locust plantations which promise well, providing the locust borer keeps out.

Senator Hemenway and Thos. P. Littlepage, his secretary, have a black locust plantation near Gentryville, Spencer County, Indiana. The plat is an example of much of the southern Indiana land which is broken and in places badly eroded. The soil is of a poor quality yellow clay, but the locust seems to grow well on it.

Thirty-five acres of seedlings were put out in the fall of 1906 and 1907, under the direction of Mr. Littlepage. He will have put in this fall, adjoining the locust plantation, 35 acres mixed species. American chestnut, Osage Orange and Russian mulberry will probably be selected, as they make a fairly good growth on this type of soil and all make good posts, the object in mind.

The locust plantation has had no cultivation, but the seedlings are doing nicely, considering the fact that they have passed through a very dry summer.

The locust borer has not made its appearance in this plantation, but in the near-by planting of Mr. R. E. Roberts the borer has got a good start and it will take prompt measures to check its progress. Mr. Roberts has had 10,000 black locust seedlings put in and intends to double the number this fall. Some of his trees which are now four years of age have made excellent growth, but the borers seem to be working on the best trees.

It is very important to growers of the black locust that they should begin controlling the locust borer as soon as it makes its appearance, else it will do great damage and soon infest the whole plantation. Remedial suggestions for the control of the locust borer are embodied by A. D. Hopkins, of the Bureau of Entomology, in a bulletin reprinted in the annual report of the State Board of Forestry for 1907, and this is recommended to those interested in the black locust.

The few descriptions given are types of the forestry planting by individuals, and will suffice for the thousands found throughout the State. Thick planting for trees at the start is recommended, in order to have the straight bole formed early and overcome numerous branching. But thinning should be done as soon as the trees begin to crowd. If neglected disease and injury results. Five

and six feet part at beginning is proper, but at three and four years every other tree should be removed and transplanted elsewhere.

Catalpa speciosa growing naturally in fields. These trees were never cut back to induce straight boles.

BIG FOUR RAILROAD CO. CATALPA PLANTATION.

The Big Four Catalpa Plantation is situated about two and one-half miles northeast of Brightwood. The planting contains thirty-five acres. The trees were planted in rows six feet apart, the distance between individual trees of each row being from four to six feet. This plantation is now eight years old and has made poor progress during that time. At present the estimated diameter is not greater than two inches, with a clear bowl length of ten feet. The railway company, probably advised by some professed silviculturist, made a poor choice in selecting this plat for a catalpa plantation.

The soil of three-fourths of the thirty-five acres is a compact clay, running together with each successive rain and becoming so hard during the dry months that it can hardly be penetrated by ordinary tools. At the extreme east side of the plat this clay shades off into a loam of greater depth and porosity. This change in the depth and character of the soil shows its effect upon growth by having produced the best developed trees of the entire plantation. The soil as a whole is strikingly deficient in organic substance and is completely covered with a growth of resistant grasses and weeds. It is known, however, that the catalpa is a tree which requires a deep, fertile soil for its best development. Forming an extensive root system, especially during the first few years of growth, the soil must be deep and porous to permit of a ready penetration to considerable depths. Therefore, the low average diameter of this planting is not astonishing, the trees having grown under extremely adverse conditions during their entire existence.

There is some evidence of disease among the trees, although not yet of a serious nature. Heart rot, which in most cases had started at the base of the trunk, has resulted in the death of several trees. This planting was not cut back until the trees had reached an age of five years, at which age the boles were of considerable size. The heart rot seems to have had its starting point in these old stumps and entered the present growth at the point of contact. Three years is thought to be the proper age for cutting back catalpa plantings, and any longer time only increases the chances for injury from disease and insects through the old stump.

As a whole, the planting is in poor condition. Cultivation, apparently discontinued some time ago, has not been resumed in any way during the present year. Indeed, there is no effort being made by the present management to better the conditions of the individual trees, or to even improve the general aspect of the plantation.

View showing the effects of prevailing winds in causing the boles of the trees to grow arched and crooked.

View of extreme western side of Big Four Catalpa planting and where the best developed trees were found because of the good soil and moisture conditions.

A medium general view of the Big Four Catalpa plantation.

View of the extreme eastern side of Big Four Catalpa planting and where the poorly developed trees are found because the soil conditions were bad. The soil here is hard compact clay.

CATALPA PLANTINGS OBSERVED AND REPORTED BY DR. G.
HENRI BOGART.

The urgent necessity of re-forestation, whether as a climatic necessity, or for the production of timber is coming to be universally understood.

But while the individual may fully comprehend the communal need, humanity is so constituted that we want to be convinced that the individual may himself profit, and at a period not too far in the future.

Catalpa growing as shown by Indiana examples certainly solves the question, from any and all viewpoints.

In May, 1905, William Wible planted one thousand trees on his farm, six miles northwest of Sullivan.

The trees were planted four feet apart, rows each eight feet distant from the other.

The soil is a "runny" white clay, overlying coal.

The ground had been previously plowed deep and well pulverized.

Back furrows were thrown out for the rows, and the plants, steadied by a little earth, were plowed in.

Mr. Wible and hand were a little less than a day in planting the 1,000, and lest the unknowing may consider that this planting was carelessly done, we point to the result of 999 trees now living.

The little plantation was set with yearling shrubs, thirty inches or better in height.

The soil was then planted in potatoes and carefully cultivated.

The second year a crop of pumpkins was put in. This is considered an ideal crop for the second year, as it does not necessitate stirring the earth too close to the young trees; while the vines effectually shade the ground and keep down weeds during the latter part of the season.

The third year the ground was seeded to grass, and the young trees were ready to fight their own battles.

During the cultivation of the crop of trees, Mr. Wible carefully kept his trees trimmed to a small cluster at the top; the extent of his pruning being best described by the photograph.

This pruning was principally accomplished by the thumb and fingers, the side shoots being removed while soft and tender.

This not only saved much labor, but avoided one detrimental feature of catalpa growing; i. e., when woody branches are cut away, there is a tendency for the resulting knot to remain as a loose plug, and afford an inlet for a species of decay.

When the photo was made in June, 1908, the Wible grove consisted of trees which average four and one-half inches in diameter and twenty feet high; a fine showing for three years and a month from planting.

The trees and planting cost the owner \$47.90 and he had a good crop of potatoes and one of pumpkins to his credit.

This summer he refused a lump sum of \$500 for his grove. This seems like a remarkable profit and may sound unreasonable. To be convinced write to William Wible, R. F. D. No. 2, Sullivan, Ind., or if earnestly considering the pecuniary side of the matter, do as the writer, and journey a little pilgrimage to the spot.

A mile away, Frank Wilson also planted a grove at the same time. Mr. Wilson's land is a part of a former swamp drained by a public ditch.

In the illustration water may be seen at the lower left hand corner. The soil is black and peaty.

Mr. Wilson pursued a similar course in this dissimilar soil.

During the first season he became too zealous in his trimming and for a time stripped everything except a cluster of leaves at the top and stunted some of his trees, therefore, they do not display so remarkable a uniformity as the neighboring grove.

Each of these groves covers about three-fifths of an acre of ground.

Both gentlemen ascribe their success to carefully following the instructions of Mr. Frank V. Felt, Greenfield, Ind. Mr. Felt has been for many years an enthusiast in the catalpa growing.

In an interview with the writer he said that whoever would plant catalpas must expect to give his plantation perfect care and cultivation for its first two years.

If this is not done the resulting failure will prove more disastrous than its mere loss, as it will create a distrust and so set back this relatively new industry. For example, catalpa trees were at one time set along the right of way of the E. & T. H. railway in Sullivan county.

The trees were not cultivated, and worse yet, were of the wrong variety, and it was with great difficulty that these two gentlemen were induced to enter into the enterprise.

Since the unqualified success that has crowned their efforts, more than 100,000 trees have been sold in that section.

R. W. McKeen, the Terre Haute capitalist, has 40,000 planted on twenty acres of sand soil on his Spring Hill farm south of the city.

The best results seemed to be attained by planting year old plants. The catalpa roots rapidly and strikes deep. If planted early there is no stunting.

At the time of planting of the Wible and Wilson groves, a neighbor, who was too impatient to wait, purchased and set a grove of three year old plants. He was at much more initial expense for trees. His bill for planting was several times as much as that of his neighbors, and at the present time, his trees are not as large as the yearlings, and even though they should attain equal size at some dim future period, there will be an immense loss of opportunity for good. No tree requires more careful handling when young, and none are hardier when once well started.

Close planting does best apparently, as the self-pruning and erect habit of growth are thus best induced.

The grove may then be culled of posts or stakes. The Wible and Wilson groves will cut posts next year; when the alternate trees are removed.

Perhaps the best example of this fact in Indiana is the Binford grove, six miles southeast of Greenfield, in Hancock County.

This grove was originally planted six by six feet, or 1,200 trees to the acre. The planting was done either fifteen or sixteen years ago.

The original owner is dead so that the exact date could be no nearer determined.

As the trees began crowding, they were culled until now there are not more than 900 of the original 2,000 standing. The trees measure an average of about eleven inches in diameter and will cut poles thirty-five feet high with six inch top. The photo was made at an open space, near one edge of the grove.

The tendency to send out side branches, after trimming will be observed.

The grove is on thin yellow clay land along the course of a bank of a gently sloping ravine. The remainder of the field, in which the grove is located is in corn this year, and will yield probably twenty-five bushels per acre, but I am assured that the land was far more fertile when the grove was planted. Certain it is, that while the catalpa will succeed on many different soils, the best results will follow on the best grounds.

Proper care in selecting the variety, and freedom from hybridizing of the seeds are absolutely indispensable to success. From Indianapolis to Richmond the Pennsylvania Railroad has a great

many catalpa planted, which have the broad branching tops characteristic of the apple trees in the orchard.

Omer Ratcliff of Richmond, Frank Felt of Greenfield, and the writer have this autumn secured seed pods from these trees and find the short pods and small seeds of the catalpa bignonioides.

Now as to the labor of the planting on the R. W. McKeen tract, seven men and three boys planted 10,000 trees in one day, and quit early. One of the first recorded instances of the recognition of the value of the catalpa speciosa, is when William Henry Harrison in a speech at Carthage, Ohio, 1826, advocated the planting of this tree for certain purposes.

The general had lived where this tree was a native, along the lower Wabash, and had used it for posts which are still in firm soilidity, at Vincennes.

According to reports of the last World's Fair the catalpa speciosa will grow in twenty years to twenty inches in diameter, and forty feet high.

In fifty years, as shown by the growth rings, it has attained 100 feet in height and thirty-seven inches diameter, in native forest.

As fence posts it has remained sound for eighty-five years in the east.

As fence rails in the air, and sun, and rain, it has remained solid for eighty years.

As railroad crossties it has remained sound and firm for thirty-two years.

It makes magnificent furniture.

As an interior house trimming lumber, it makes a finish equal to any American wood, considered either for beauty or polish.

Every portion of either freight or passenger coaches can be made from catalpa, as was shown by the Barney & Smith exhibit at the last World's Fair.

It can be handsomely carved, readily yielding to the chisel.

Trim, straight, durable telegraph and telephone poles can be grown in a dozen years.

No timber yields more kindly to bending or retains its bent wood shapes better.

In cabinet work it does not warp nor shrink.

It will grow into railroad ties in one-twelfth the time of white oak, and will more than doubly outlast that timber.

It makes pulp, from which the finest book paper can be made.

Catalpa speciosa planting of William Wible, Sullivan, Indiana. These trees were planted from seedlings in May, 1905. The photograph was taken June, 1908.

Catalpa speciosa planting of Frank Wilson, Sullivan, Indiana. These trees were planted May, 1905, and photographed by Dr. G. Henri Bogart, June, 1908.

NUT ORCHARDING.

By MASON J. NIBLACK, Vincennes, Indiana.

"Nature plants groves and man plants orchards."—Prof. H. E. VAN DIEMAN.

It seems safe to say that nut culture in Indiana is as yet an unexplored field. There are no nurseries that profess to supply young nut trees specially fitted to be transplanted into orchards within the confines of this territory.

In years gone by there were very many native nut trees growing in a wild state in the broad expanse of the forests which provided large quantities of food for the red man while he was an inhabitant and which provided food and luxury for the white man afterwards as long as these trees were spared from destruction.

The great value of the native nut trees was not appreciated by the Hoosier fathers nor by the sons of these fathers and their superiority over other trees of the forest was so far overlooked as to permit them to be felled by the woodsman to be made into lumber or rolled into log heaps with the logs of other trees to be burned preparatory for the plow and for the cultivation of the soil.

So indifferent, careless and negligent have been the owners of large numbers of these delicious nut bearing trees that they have too often acquiesced in the felling thereof by strangers and trespassers that the one season's produce might be the more easily gathered.

So rapidly are the native nut trees becoming extinct that the time is overly ripe for staying their further destruction and for a careful and economical study of their value as trees to perpetuate and propagate.

The native nuts of Indiana are the black walnut, the butternut, the hazelnut, the beech nut, the hickories and the pecan. The pecan will be dealt with more in detail in this article because it gives better promise of rewards and more is known concerning its culture.

The pecan belongs to the hickories, of which it is a species. While many of the hickories are worthy of cultivation, the pecan is by far the most important and profitable to cultivate, although the shellbark hickory is always marketable, is delicious in its nutty sweetness and by no means entirely distanced by its more favored relative. Prolific bearing shellbark hickory trees exist in small

numbers in almost every part of Indiana, although probably, in seedling or native form, and there is no serious danger of their becoming entirely extinct for some generations. But some way should be provided for selecting the best varieties for propagation by budding and grafting and for cultivation in orchards.

The pecan trees, however, are somewhat different. The territory in which these are found in a wild state is much more limited. Their home is in the rich bottom lands in the alluvial soils along a few of the rivers. They are fast disappearing. Unless something shall be done very soon to preserve the best producers amongst the wild trees that still remain, or to plant, cultivate and propagate other trees they will shortly be gone. Some central authority should be established, without delay, either through the State Board of Forestry, or through the Horticultural Department of the Experiment Station at Purdue University, more appropriately the latter, to plant nut orchards of seedling, grafted and budded nut trees; to locate the largest, most prolific and most desirable varieties that grow on the trees yet living from which to graft and bud and to issue bulletins and other information to every one wishing to receive it. In this way only can the matter be handled in a sure, business-like and proper manner. A law should be made to take in hand the guidance of this undeveloped but sure, safe and profitable industry.

Nuts when planted do not come true to seed. Like other fruits, the apple, peach, pear, plum and others, when grown from the seed produce "seedlings" not often resembling in general characteristics the nut of the parent tree but more likely the characteristics of some remote ancestor or an entirely new variety. The nuts from no two wild or seedling trees fully resemble each other in appearance or qualities. Each wild or seedling nut tree gives to its fruit an individuality which, to one acquainted with it, will distinguish it from the nuts of any and all other trees. It follows therefore that the nuts from some trees of the same kind are better than others. They may be larger in size, more delicate and delicious in flavor, thinner shelled, better filled with meats, better in cracking qualities, the trees may be more regular and more prolific in bearing, hardier, better growers and better and easier to propagate from than others. It follows again that in planting nuts for the purpose of growing a seedling trees it is strongly advisable that the very best and most desirable varieties obtainable be used, as the better the seed the better the chances are for good varieties in the seedling trees.

It is true but probably not generally known that the pecan never grew as a native nut in any other part of the world than a small part of the United States. In its wild form it grew originally as a forest tree in the Mississippi Valley and some of its tributaries and in the valleys of a few rivers in Texas. It grew as far north on the Mississippi River as Davenport, Iowa. In the Wabash River Valley it grew as far north as some forty miles above Terre Haute, in Indiana. In the Ohio River Valley it grew as far up as Cincinnati, Ohio. From these points it grew in southeastern Iowa, in the eastern half of Missouri; western, southern and southeastern Illinois; in the southern and southwestern part of Indiana; western part of Kentucky and Tennessee; the northern part of Georgia; in a very large part of Arkansas, Mississippi, Louisiana and in the southeast half of Texas. It is unknown in any other part of the world except as transplanted by man.

In Texas the pecan in its wild state is probably more abundant than in all other places combined. These nuts are often shipped from Texas in train load lots, and it is said that sometimes one-half of the Texas crop remains ungathered. The Texas pecan is the pecan in commerce today. They are the reddish brown pecan that is found for sale in the stores. They get this reddish brown color from being polished. They are thus bright and uniform in color and more inviting to the purchaser. These Texas pecans are very thick shelled and hard to crack. Their meats are undoubtedly very fine, yet they are not equal in flavor to the Northern or the Indiana pecan. The Indiana pecan is also thinner shelled and easier to crack.

Theoretically it is fair to presume that the original home of the pecan, very many centuries back, was in the northernmost and highest up-stream limits of the territory above mentioned. Through the aid of the running waters and of the birds, squirrels and other animals the pecan was possibly and probably spread down along and back from the rivers until the whole original territory as found by the white man was covered. It is not at all likely that the pecan was spread upward from below. All the tendency in the spread of the pecan by birds, animals and moving waters would naturally be the other way—down stream.

It is now probably twenty years since planting pecan trees in orchards was begun. The work was taken up in the southern states and is now quite extensively carried on in Louisiana, Mississippi, Alabama, Georgia, Florida and to a smaller extent in Texas. The orchards first planted were nearly all of seedling trees, but at

the present time few trees are planted except budded and grafted trees of known varieties. In consequence of the extensive planting of pecan orchards in these Southern Gulf Coast States there has sprung up a new industry in these states in the way of pecan nurseries. There are now some twenty or more pecan nurseries scattered over these states where budded and grafted trees can be purchased in any number. Some of these nurseries can supply from one tree up to one hundred thousand trees. Up to six or seven years ago ninety-five per cent of the pecan trees sold by these nurseries were seedling trees, but now the percentage is reversed and ninety-five per cent of the trees sold are budded or grafted trees.

While nut culture in the Southern States has not altogether passed out of the experimental stage it has gone far enough to demonstrate the possibilities that are in the work. The industry of orchard planting is rapidly on the increase and the profit in the business, being several times greater, per acre, than cotton or any other staple crops, is attracting considerable and widespread attention. The literature of the business while yet scanty enough is growing. "The Nut Grower" is a monthly publication published at Poulan, Georgia. It is the official organ of the National Nut Growers' Association. It is devoted exclusively to nut culture. It is a modest, unpretentious paper—the October number sometimes comes out in December or January—but it is doing a great deal of good. "The American Fruit and Nut Journal" is published at Petersburg, Virginia, and is largely devoted to nut culture. It has a large circulation, is up to date and enterprising and has great merit. Prof. H. Harold Hume in 1906 published a small book—"The Pecan and Its Culture"—which is a very valuable contribution to the matter of which it treats. This book is published by the American Fruit and Nut Journal, Petersburg, Virginia. The catalogs of many of the pecan nurseries, whose advertisements will be found in the papers above mentioned, contain a large amount of useful information on nut culture. Dr. J. F. Wilson, Poulan, Georgia, who is Secretary of the National Nut Growers' Association, has for sale copies of some of the proceedings of the annual meetings of that association which are full of interesting and valuable information.

The Southern pecan growers, as will be noticed in many of their writings, are somewhat dubious about the pecan growing to advantage in what they call the Northern limit of the pecan belt. "The Nut Grower" published at Poulan, Georgia, in its November, 1907, issue says: "While pecan nuts are marketable all over the world

it is a significant fact that this is the only country where they are indigenous. The United States, or the Gulf Coast, rather, has a natural monopoly of the industry." And the same paper says in a few issues before the one just quoted from: "The Nut Grower has been advised from reliable sources that pecan near Niagara Falls has borne fruit in large quantities for many years." Instead of saying Niagara Falls in this last quotation it might have said Iowa, Missouri, Illinois, Indiana, Ohio, Kentucky, New Jersey, Maryland, Virginia and North and South Carolina, as pecan trees have been bearing "fruit in large quantities for many years" in all of these states and in some of them for many centuries.

Not to dwell upon the philosophy of the matter too long, it seems safe and sound to say and believe that as pecan trees have grown and produced large quantities of fruit in Indiana and other states in the northern limit of the pecan belt for several centuries and are yet doing so, they will continue to do so, especially under careful and proper selection and cultivation. If nuts that are grown in this locality shall be planted in this locality and not too far north of the locality where they have grown, it is undoubtedly safe to rely on the harvest. And if scions or buds from trees grown in this locality shall be grafted or budded upon stocks grown from these nuts, it will be safe to rely on the resulting trees for as abundant a crop of nuts as can be relied on anywhere. No horticulturist will gainsay these conclusions. The main thing and the all-important thing and the indispensable thing in demonstrating the correctness of these conclusions is to discover the suitable varieties to use for scions and buds. Every citizen of Indiana and in the northern limit of the pecan belt, who knows of growing pecan trees, should appoint himself a committee of one to discover and mark the choicest and best varieties that grow and save the trees that bear them for propagating purposes. By the united efforts of all much will be accomplished. Many very good varieties will be found although the ideal nut will never be discovered. There are many very good varieties of apples and other fruits, but the ideal apple and other fruits has not been and probably never will be brought to light.

There will be no great trouble in finding suitable varieties in Indiana, as several have already been located and others exist all the way from Covington, in Fountain County, to the mouth of the Wabash River, and many more will be developed by the planting of seedling trees. • If the work of finding and preserving the best varieties of pecans grown in Indiana had commenced fifty years

ago a very choice lot of varieties would now be had. But the good varieties that yet remain furnish a sufficient lot to drive away discouragement on this account.

If Indiana and the other states in the Northern limit of the pecan belt had developed the industry of pecan culture prior to the Gulf Coast States and the present conditions were now reversed would it be probable that it would have been a matter of conjecture whether or not the industry would have thrived in the Gulf Coast States and in the Southern limits—if such could be defined—of the pecan belt?

It is possible that some or all of the Southern varieties may not do well or at all in Indiana, but even this matter is not settled. Experimental work along this line will have to be done and the matter thoroughly tried out before any reliable conclusions can be reached on this subject. Such work should be encouraged as much as possible.

Nature seems to have already established the fact that the Northern varieties will grow, prosper and do well in every way in the Southern States, as it is probable that all the varieties that exist in those states or at least the ancestors of those varieties originally came from the North.

While everyone might have a good notion as to how to plant nut trees and take care of them afterwards, it might be well to enumerate some of the matters in that connection that have been found useful in a practical way. In the first place if one desires to plant nuts in small quantities it is well to plant the nuts in the fall in the exact place where it is desired that the trees shall grow. Care should be taken in the spring that proper cultivation be given the young trees and that nothing shall destroy them or disturb them. If large numbers of trees are to be planted it is well to plant the nuts in nursery rows from four to six inches apart, two inches deep and the rows four feet apart so that careful cultivation can be had and the weeds kept out until the trees shall be ready to transplant. The rows of nuts should be ridged over pretty well so as to keep them from becoming water soaked, and these ridges should be dragged down in the early spring. This will give the young trees a clean bed to grow in and a better chance to get a good start. Many find that the best way to handle the nuts that are to be planted is to stratify them in the fall. A well drained place should be selected, a layer of sand or loose earth should be made and upon this a layer of nuts should be placed, then another layer of sand or loose dirt and another layer of nuts and so on. They should not

be exposed to too much moisture although the earth about the nuts may be moist to some extent. In the early spring when the weather begins to open up properly the nuts may then be placed where they are desired to grow or in nursery rows four to six inches apart as already mentioned. In the spring when the nuts are taken out of the layer they may be found cracked open and sprouting. With care not to break the young sprouts they will be in just the proper shape for planting. They must not remain out of the ground long enough to become dried out. It might be well also to protect the nuts in the layers above and below with wire screens from being dug up and removed by squirrels, moles, mice and other enemies which are said to sometimes do considerable damage to the unprotected nuts in the ground.

There is another way to handle nuts for planting and that is to soak them three or four days in water in the spring and then plant them either in the places where they are to be grown or in the nursery rows.

Any of these methods are good and each method will be warmly advocated by the various people who practice them.

If the young trees are to be budded or grafted the proper time to do this work, generally speaking, is when the young stock is two years of age, but this work may be done when the stock is younger if it shows sufficient growth or older if desired. They are then allowed to grow another year or longer if necessary or desirable, at which time they are ready to be transplanted into orchards and permanent locations.

The budding and grafting process is much more difficult in the case of nut trees than it is with the ordinary fruit tree. Many persons never acquire sufficient skill to bud or graft nut trees. Other persons become proficient only in a very slight degree while a few men adapt themselves to the work and become highly successful. The work is growing easier as it becomes better understood and it is likely that the percentage of successful budding and grafting will be greatly increased. At the present time it is safe to say that in the nut nurseries of the South fifty or sixty per cent of successful work is all that is now being accomplished. This difficulty in budding and grafting is and probably always will be one of the factors in keeping the price of nursery stock higher than in other nursery lines. Nursery stock in nut trees has not yet reached a point where it is cheap; but this need be no drawback, as trees well grown in nurseries are well and easily worth all that the nurserymen are asking for them.

Nearly all the known methods of budding and grafting have been tried on the pecan. Some persons succeed with one method and fail with others. Should a budder or grafter be asked as to which method is best the answer would be the naming of the one he himself best succeeds with. Yet there are two or three methods of each budding and grafting that have become more or less general, and these methods are generally advised. Annular budding, which is the same as ring budding and the same as flute budding, is much used and advised. Chip budding is being used considerably of late and shield budding has been used with some success. For annular budding there are several budding tools on the market, probably the best and most used being "Whites" made by Prof. Herbert C. White, of De Wit, Georgia.

The methods used in grafting are most generally the whip or tongue method and the cleft method. The tongue method is used very largely in root grafting. The graft is made at the crown where the root comes to the surface of the ground and from one to six inches below that point. In root grafting wax is not generally used, as wrapping with waxed twine or cloth being covered up with dirt is sufficient to keep out the air. Such wrapping does not have to be cut off, as it will rot off in proper time. In root or crown grafting the dirt should be piled up around the scion so as to leave but one good bud above the ground. Extra care is necessary in every part of the work of budding and grafting nut trees.

In transplanting the trees it will be noticed that the taproot is much longer than in ordinary trees, the taproot often being longer than the tree above the ground, extending three or four feet or more at two years of age. It will not be necessary to take up the entire taproot. It may be cut off so as to leave it some thirty-six inches in length. With these cut off the trees when transplanted will form new roots and make better and thriftier growth. The length of the taproots of the trees is another factor that will keep the price of nursery stock higher than in other nursery lines. All the trees have to be dug up by hand.

Pecan trees when planted in orchards should not be less than forty feet in distance apart, sixty feet apart is far better, and many of the best informed and most experienced growers of pecan trees insist that the distance apart should be eighty feet and even one hundred feet apart. At forty feet distance the trees at thirty or thirty-five years old would probably reach each other in their growth. When they are placed out in full sunlight and allowed to grow they make a good head and quite an extensive spread.

Nut trees are like other fruit trees and make a healthy growth with proper cultivation and fertilization. If there is any difference between other fruit trees and nut trees it is that nut trees demand and must have more careful cultivation in order to make the most advantageous growth and advancement. While trees may grow without fertilization, yet there is no tree that will show so quick a response to aid in this line as will the nut trees. And such aid should not be withheld where it is needed. Great care should be taken not to stunt the young tree in its growth. It should be kept growing as vigorously as possible, as, if it is stunted, it will always be a slow growing tree. The stunted trees in the nursery rows should be discarded and not transplanted.

In transplanting nut trees extra care and precaution should be taken not to let the roots of the young trees become dried out. They should be kept from the sun, wind and dry air and in a moist condition up to the very time of placing them in the ground to be covered. It should always be borne in mind that there is more difficulty in getting nut trees started properly in orchards than there is in the case of other fruits. But when these extra precautions are taken the results are just as sure.

The land where nut orchards are planted can be used for many years between the rows for the planting of almost any kind of crop. It is always best, however, to put in that crop which will have to be cultivated most in the summer season, such as corn, potatoes and garden truck. It is not advisable to put in grain crops or grass or timothy at least until the trees have become fifteen or twenty years of age. The best thing that can be done about every third year is to sow clover, cow peas or similar crops to be turned under. This will keep the soil alive and feed the roots of the trees in a way that will do them very much good. • Crops should never be grown, however, too close to the trees. If possible these should be carefully cultivated with the hoe or some other way so as to keep the dirt loose about the trees and the weeds and grass from growing close to them.

A number of farmers and landowners who have had wild pecan trees growing on their land have cut out all the other trees and left the pecan trees standing. There are a number of groves of from ten to two hundred or more trees along the Wabash River. Very few of these trees bear nuts of choice varieties but they could all be top worked by budding and grafting the best varieties in the various groves or in other groves and made to produce better and more desirable nuts. Top working is a good practice and should be

liberally indulged in. It might be possible that buds and scions from southern trees of the southern varieties could be successfully top worked on trees in such groves as are here mentioned. Extensive trials in this line should be made. The farmers and land-owners who have preserved these trees are true benefactors. They may have builded better than they knew. Thanks of the living and of children yet unborn are justly due them. If they give their aid and assistance to the further developing of the work of nut culture they will leave a heritage to those who come after them that will be worthy of all commendation.

Much discussion has been had on the subject as to what soils are the best for the growing of pecan trees, and much more discussion will have to be had before any definite conclusion can be reached as to what soils are the most advantageous. At the present time in the Southern States it is said that ninety per cent of the orchards that are now planted are planted on sandy and clay uplands. The natural home of the pecan is in the rich alluvial soils along the rivers, but trees that are of great age in the hilly country seem to be as thrifty and as productive in every respect as the trees in the bottoms. The richest soils are none too good for the pecan tree and yet the tree grows well and produces well in the thinner and less rich soils wherever tried. For the first few years in the life of the pecan it is probable that the tree will bear a greater amount of nuts in a thinner and less rich soil and the trees may be safely planted shorter distances apart than in the richer soils. The trees will undoubtedly make a heavier growth in the rich alluvial soils and may live to a greater age than those in the sandy, clay and other upland soils. In the alluvial soils the pecan tree will live to be two hundred years old and over and it may be that in the other upland soils it will live to be only one hundred and fifty years old or such a matter. But it is all guess work. It is probable that the pecan will grow anywhere and in any soils that exist in Indiana with two notable exceptions. It will not grow in swampy land. The land should be well drained. Neither will it grow in soils that are underlaid for anywhere from twelve to eighteen feet below the surface with an impenetrable sub-soil or rock. In such a case the tree will grow all right until the roots, which always grow deep in the ground, reach the impenetrable sub-soil or rock, and then it will begin to wither and will finally die.

The value of the pecan and other nut trees as shade trees seems to have been a matter entirely overlooked. There is no better shade tree that grows than these nut trees. Their foliage is beautiful and

their form is stately and symmetrical. If the Hoosier forefather had selected nut trees for shade trees about the dwellings and buildings on farms and along the highways, instead of selecting the elm and other trees for that purpose, they would have had all the advantages that they received from the trees that they did select and the additional advantage of a crop of nuts from the various trees for the use of the family and of neighbors and probably many for sale in the markets. It is not too late for this work to be taken up now. Every farmer and landowner should raise a few nut trees for family use and to supply the neighborhood. A few nut trees around and about the dwellings would produce nuts enough to go a very long way towards furnishing all the groceries and other things needed in the household. The housewife with the help of the children would gladly look after these the same as she does after the chickens, the eggs and the butter, and gathering the nuts would give her much less trouble and hard work. She could always trade the nuts for things at the store with great advantage.

Growing nuts gives to the grower all of the advantages of growing other fruits with quite a few additional. For instance, after the nut crop is gathered it is not necessary to place it in cold storage to preserve it. The nuts grow uniform in size and appearance upon the trees and they never have to be sorted in putting them upon the market. They do not bruise in falling from the trees nor in handling. If well dried out at gathering time they will keep in the bin as well as wheat. The nuts do not deteriorate in value for a year after they come from the trees and at any time the producer is ready to put them upon the market they are salable.

Nut trees do not have to be sprayed like other fruit trees, as the insect enemies are so few that they are scarcely worth mentioning. There are some enemies, however, of the pecan. Chief among these might be mentioned crows and squirrels.

The pecan tree lives to be more than two hundred years of age. The older they grow, unless crowded in the rows, the more nuts they will produce and the larger the income will be from each tree. It is often said of the nut trees that they are far better in every way than a life insurance policy, because one does not have to die to win. After trees are planted the income from them will be greater and greater as age approaches, giving comfort and support when most needed.

There are other nuts which might be raised with profit in Indiana. Among these are the shellbark hickory, English walnut and the chestnut. Much could be said to the advantage of each of these.

The English walnut grows very successfully in Pennsylvania and New York and other states and it is pretty generally agreed that they will grow to very great advantage almost anywhere in the State of Indiana. Several nurseries are in existence that supply the English walnut trees and chestnut trees. As shade trees they are shapely and ornamental. There are none better.

It is well to emphasize the fact right here that nut trees purchased from nurseries can not be purchased at a low price. The expense of getting them ready to transplant is too great for them to be sold at prices to compare with other fruit trees.

The question will naturally arise in the mind of everyone in considering the matter of nut culture as to what age do nut trees begin to bear fruit. The answer to this question undoubtedly furnishes the greatest stumbling block and drawback to taking the matter up, and yet after all there is no good reason why it should. Trees grow while men sleep, and when started right the fruit bearing time will roll around before one realizes the passage of the days. In the first place it is as easy to raise nut trees as it is to raise pumpkins if they are not to be budded or grafted. A row fifty feet long in the garden will grow from the nut a hundred trees up to the age of three or four years at which time they should be transplanted to their permanent places. From the time they are thus transplanted they will begin to bear at five years and many of them will begin to bear at four years. Trees from the nursery generally bear at five years from planting. The budded and grafted trees are of course, surer to bear at an earlier age than seedlings. Apples and other fruits take this long a time for beginning to bear. Horses take three or four years to come to working age. Other good and valuable things require time to reach the useful and profitable age and there is no unusual or particular hardship in waiting on the nut tree. At five years it is probable that the nut tree will bear five pounds of nuts, at six years, ten pounds, at seven or eight years, twenty or thirty pounds, and at fifteen years probably one hundred and fifty or more pounds. This would of course be a very good yield and the price which the nuts would bring would put the profits on the proper side of the column.

Ordinary pecans raised in orchards will probably never bring less than fifteen cents per pound. The choice varieties from the budded and grafted trees will no doubt always find a ready market at not less than thirty cents per pound. But suppose the price per pound will be fifteen cents all around. If the trees are planted at forty feet apart there would be twenty-seven trees to the acre,

and if the yield were only half as large as suggested, there would still be a large sum per acre of income. And the land could be used for other crops between the trees up to the time they get fifteen or twenty years of age. In fact, crops ought to be grown as the trees will be benefited by the cultivation. Of course in the growing of nuts like in the growing of other crops there will be years when poor crops will be raised. Such matters are incidental to the business. They are in the hands of nature and are not within the control of man. There is no possible danger of there ever being an oversupply of nuts in the market. With all the orchards that there are in the Southern States, it is almost impossible to buy any of the orchard grown and named varieties at the present time as they do not get generally on the market. They are consumed where grown and bring large prices. When produced in sufficient quantities to get upon the market they will naturally crowd out the wild pecan of Texas and the increased demand and the increased uses will always readily take up the supply. After the whole of North America gets supplied Europe will take all that will be left over and it will be two hundred years or more before Europe will be able to get very many of them.

To one not familiar with the value of the nuts consumed in the United States the figures will necessarily appear startling. Not to count any home grown products just notice the value of the nuts that have been imported into the United States. Notice also the rapidly increasing value of the importations. There is a tariff duty on nuts brought into the United States amounting to about six cents per pound, but in 1900 the total value of all nuts imported amounted to \$2,978,834; in 1901, \$3,268,855; in 1902, \$4,044,341; in 1903, \$4,866,398; in 1904, \$5,471,166 and in 1907 it amounted to about \$9,000,000. None of the nuts imported were in any way equal in intrinsic worth to the pecan. With this array of figures the landowners of Indiana ought to be started into the extensive planting of nut trees. Professor H. E. Van Dieman, one of the best authorities in the world on nut culture and horticulture generally, says that the landowners of Indiana are losing fabulous sums of money every year by not availing themselves of the opportunities they have in cultivating nuts.

A quotation from H. Harold Hume's work on "The Pecan and Its Culture" is not inappropriate to be made and adopted. "The great objection to grafted trees is the first cost, and yet, in the face of that objection it is best to plant grafted trees even if fewer of them are planted. If grafted trees are out of the question, then

plant seedlings and topwork them. Grow seedlings from nuts if necessary; but to those who live in sections where pecans can be grown let me say, *plant pecan trees*; plant budded or grafted pecan trees if you can—but plant pecan trees.”

In the field work connected with preparing this article for the State Board of Forestry many groves and single trees have been visited and a few photographs are herewith presented of some of the trees that bear varieties of nuts worthy of being propagated. Some of the trees found could not be photographed on account of their being surrounded so closely by other trees in the woods. Nearly all the trees in the photographs were originally surrounded by other trees which have been cut away. The trees therefore

Fig. 1. Wild seedling Pecan in Busseron grove (Black, No. 1). This tree is 8 feet 8 inches in circumference at stump and near 100 feet high. The nuts of this tree are excellent quality and run about 68 to the pound. This tree is a very prolific bearer each season.

Fig. 2. No. 1 Busseron. Smaller than natural size. Showing uniformity of type.

have been shaped by their surroundings to a very large extent and do not show the beautiful form and shapeliness that they would show if they had grown in the open from the beginning.

Gill's Prairie Pecan Grove in the southwestern part of Sullivan County was visited, but not at a time when any specimens of the nuts could be had, and an arrangement to get some of the best specimens when they matured did not result in getting any. Abner Duputy has a pecan grove in Gibson County, Indiana, along the Wabash River, some two miles below Mt. Carmel, in Illinois. There are over one hundred trees in it. The pecans were not mature at the time this grove was visited and an effort to get some of the best specimens failed.

Several good specimens are said to grow in a grove along the

Fig. 3. Wild seedling Pecan (Black, No. 2), Busseron grove. This tree is 4 feet 8 inches in circumference at the stump and not more than 50 feet high. The nuts of this tree are fine in quality and run about 65 to the pound.

This Indiana nut was pronounced eminently worthy of propagation by the Committee on
Nomenclature and Standards of the National Nut Growers' Association.

Wabash River belonging to Wm. H. Glover near Grayville, in Illinois, but this grove was unfortunately not visited. Several arrangements to visit this grove with Mr. Glover, whose home is in Vincennes, failed.

A large grove of some three thousand or more pecan trees was visited in Point Township, in Posey County. This was an original forest on some sixty acres in which four-fifths of all the trees were pecan. It was on land that formerly belonged to Governor Hovey. Several good specimens (Posey No. 1—Posey No. 2) were found in this grove and in other parts of Point Township.

The groves and trees in Vigo, Vermillion, Park and Fountain counties were not visited. They were left for future investigation.

Fig. 5. Wild seedling Pecan (Black No. 3), Busseron grove. This tree is 4 feet in circumference at the stump and not more than 50 feet high. The nuts are medium size and run about 75 to the pound. This tree is a regular and prolific bearer.

Fig. 6. Another one of the more promising of the native Pecans.

Three good specimens were found in a grove in Busseron Township in Knox County (Black No. 1—Black No. 2—Black No. 3). There are over two hundred trees in this grove, but the photograph taken of it does not show it to advantage.

There are other groves and trees noted for their good varieties in Sullivan, Knox, Gibson, Pike and Posey counties that were not visited. They are noted for future work.

Report of Work Accomplished and Experiments in Forestry

AT THE STATE FOREST RESERVATION AND FORESTRY EXPERIMENTAL STATION, HENRYVILLE, CLARK COUNTY, INDIANA.

The lines of improvement which have been in progress since the establishment of the Reservation have been advanced each year as the means permitted until at the present they are all nearing completion. The custodian's residence and the necessary out-buildings thereto, including a modern equipped barn, are now completed and two splendidly finished cisterns 14 feet in depth and 12 feet in diameter were constructed, one for the residence use and one for the barn use. Both the house and barn are guttered and spouted for filling the cisterns. This method is the only sure plan of water supply in that community. During winter and spring enough water can thus be accumulated to last through the droughty season, generally of three or four months' duration.

The custodian's residence is mostly furnished with rustic furniture of the "Old Hickory" designs. This was done to more fully retain the pioneer effect, since the residence is built of hewed logs and has large open fire places. Only such furnishings have been secured as were necessary for the needs of the institution and the custodian.

The barn is a modern planned hipped-roof frame structure, capable of sheltering six horses and feed for one year. Adjacent to the barn a lot of about three acres has been fenced off for use as a roaming lot for the horses when not in use. The front of this lot is enclosed by an ornamental woven wire fence of 52 inches height and iron gateways.

ROADWAYS.

The roadway, which extends from the public highway on the east centrally across the 2,000 acres, was well graded the past summer and about three miles well graveled. The gravel was spread at five inches depth at wagon tread and eight inches in center. After it had been hauled over, the center was graded into the treads so that the surface of the road has a fine, compact, oval sur-

face of gravel free from depression for water accumulations and the drainage throughout completed by properly constructed side ditches and culverts to permit of the water's readily being conducted from the roadway. This piece of improvement will be of great value to the travel and hauling of the Reservation. Plenty of good gravel was obtained upon and near the Reservation for this use. Sufficient can be found upon the tract for all the road building, but where it could be bought and hauled cheaper than the hauling alone from the Reservation supply it was done as a matter of business economy.

In addition to this road building a gravel walk was constructed from the interurban station at the Reservation, angular across the park plat to the custodian's headquarters and Administration building. This walk is four feet in width and excavated four inches deep and filled with gravel. This walk is about 1,000 feet in length. Two concrete abutments were constructed for rustic bridge walks across the gullies. In addition to these improvements two concrete bridges were constructed across the wagon drive between the interurban station and the Administration building at points where ordinary sewer tile would not carry away the water sufficiently quick to prevent the washing across the road. Another year will see the road building in good completed condition.

PARK.

A park of about five acres has been planned, lying between the interurban station of the Indianapolis and Louisville Traction Company at the Forest Reservation and the Administration building. It is the aim to make this park a splendid example of ornamental forestry and shrubbery growing, also landscape designs. The accompanying plat indicates the plan. The lay of the land between the points of extension make it possible for the finest effects in landscape architecture and its ultimate completion will add a great value to the purposes of the institution.

TREE CULTIVATION.

The field cultivation to trees the past summer was as extensive as the means would permit. The extensive drought made cultivation very difficult and the young trees have suffered seriously. The cultivation given the trees mostly consisted of keeping the rank weed and sassafras growths cut down and away from the young trees and thereby preventing their being smothered out. This

Fig. 2. Chestnut Oak at State Forest Reservation, from acorns planted fall of 1904. No pruning has been given these trees, but the boles are good.

form of cultivation became necessary as the only possible thing in view of the extensive area to be looked after and the small funds provided. There are now about 400 acres of fields planted to trees and indicates between 750,000 and 800,000 trees to be cultivated by a fund of \$900.00 annually. The funds are not a drop in the bucket to what is needed to attend to this work and make the station a model of forest tree growing. In addition to this weed and sassafras cutting and hoeing, such fields as could be were well plowed by means of one-horse breaking plows, the dirt being thrown upon the trees and leaving a vacant furrow in the middle of the rows. This plan of plowing for killing out the sod and weeds was the most satisfactory plan we have tried and the up-turned dirt had a very great effect toward saving the trees during the drought by forming a mulch around them. By this plan one man with a good strong mule can cultivate three acres of trees per day. The fields which were given good plowings in this manner—the two plowings being transverse—are in a fine condition, but those trees not so treated did not make any showing this year. By reason of the drought the growing ended by the middle of July. It will take till spring to tell the damages done by the long dry spell this summer and fall. The larger trees along the driveways were cultivated by digging the ground up around them for a distance of two feet from the trees. This plan perhaps saved a great many of them this summer. Upon most all of the 400 acres of fields planted a good stand of trees are growing, but in the future more cultivation must be given. Pruning attention must be given from now on.

FOREST CLEANING.

The forest cultivation by which the woodland is gone through and the damaged, excess and inferior species of trees are removed has been extended farther than any previous year. Nearly 300 acres were gone over the past autumn in a careful manner. At the present time about 1,000 acres of the Reservation have been gone over and thus cultivated. The product secured from this work will be of more value than any former year. A far greater amount of wood, ties, logs and lumber will be obtained and the prices therefor ought to be better than last year. Only a small amount of stuff will be marketed this fall and winter, as the aim is not to attempt to market anything if the winter weather is open. The difficulties of winter labor under such conditions are too great for the returns. Marketing the product will be postponed till good roads and fair weather.

ELECTRIC RAILROAD.

The Indianapolis and Louisville Traction Line has been fully completed and is operating an hourly schedule across the Forest Reservation, thus adding a great convenience for the public who desire to visit the institution. The railroad company has constructed a splendid rustic station at the Forest Reservation convenient to the Administration building and has removed the large dirt banks thrown up in their construction and arranged the drainage so as to least affect the welfare of the Reservation. The railroad company has shown a splendid interest in all its operations, especially as to benefiting the institution and the public travel thereto and from.

FOREST FIRE DAMAGES.

Although forest fires of great damaging influences have occurred frequently in the vicinity of the Forest Reservation none has happened upon it since its establishment. The cause of this is due to the caution used by all the adjacent landowners in setting fires that might spread to the Reservation, and further to their united efforts to combat any fire that might become started on adjacent lands with a chance of spreading to it. The overseer and the employes have at all times observed extreme caution in their labors against starting fires and also by lending their energies toward combating fires that threaten the institution. The Secretary, however, in order to take time by the forelock, has twice each year served written notice upon all adjacent landowners, spring and autumn, to guard against setting fires and citing the law pertaining thereto. It is due to all these cautions combined that the Reservation has not been visited by fire in the five years of its existence, considering the danger from such a menace by the extreme droughts.

THE CULTIVATED FOREST LANDS.

The great benefit to the woodlands by the forest cleaning process which has been going on for the last four years is very apparent. The cutting out of all the undesirable trees of every kind and the removal of the merchantable product obtained, and within a short time the rotting away of the brush piles leaves the woods clean from obstruction.

Underneath the upper trees a dense new growth from seeds and roots of prime hardwoods is springing up to replace the older trees when they should be removed. No better example of first and second story forests can be seen than are found in the woodlands

so far treated to the forest cleaning. The splendid stand of clean thrifty trees retained at the time of administering the process fully justify the method and the expense by their growth efforts. These cultivated growing forests are an inspiration to the forester and the disbeliever as well. The more than 500,000 best commercial hardwood trees—mostly white oak—which have been retained upon the 1,000 acres treated to forest cleaning to the present time will mean a vast resource to the State in the course of twenty-five or fifty years if the proper safeguard is thrown around them to prevent damage and they are thus allowed to grow and develop, as they will if unhindered.

TREE-GROWING EXPERIMENTS.

Tree planting and growing from both seeds and seedlings at the Reservation and Experimental Station has so far proven successful to a degree surprising even to many who claimed knowledge of the subject, but doubted the wisdom of the attempt upon the cheap lands. The annual report of 1907 from this Department gives in detail the facts and results of some twenty experiments. The following brief descriptions are given to show further experiments and successes in a general way:

Black Walnut.—There are now growing upon the fields, by as close an estimate as can be made without actually counting, about 85,000 black walnut. These trees are growing from seeds planted directly, as this tree cannot be transplanted successfully. The trees are in age, counting from the time the seeds were planted to the present, from two to six years and range in every degree of quality and style. Some of the first trees planted are not more than two feet in height and the boles are poor, while others are twelve feet in height and the boles are perfect. Wherever the soil conditions are good the trees are good, but where the soil conditions are poor the trees are poor. Walnut must have good rich soil and plenty of moisture. They need lots of sand and gravel in the soil composition for their successful growing. This tree will not do well on hard clay soil. In mixture with ash, catalpa, locust and poplar it does well.

American Ash.—The American or gray ash is showing better results on thin clay lands than any other tree attempted to grow. This tree seems almost perfectly adapted to almost any soil and condition. There are growing on the fields about 60,000 ash, and they are all doing well no matter what the soil conditions are. The bole formations of this tree excel any other and its growth

rate is good. This tree can be transplanted successfully and should be first grown in the nursery and then transplanted to the permanent sites. It grows well in mixture with all other trees.

Yellow Poplar.—There are growing on the fields about 65,000 yellow poplar, which were planted from nursery grown seedlings. The poplar is very much like the walnut in soil and moisture requirements. It does best on rich soils, but it will grow better on poor soil than the walnut. This tree seems to be affected more by the drought the past summer than any other tree. It ceased growing first of any, but I think the vitality is lasting and they will resume their growth again in the spring. This tree is best grown from seedlings produced in the nursery from seed and then transplanted to the fields. The poplar tends to low branching when planted on open fields, but close planting and pruning will overcome the fault.

Catalpa Speciosa.—Some experiments in *catalpa speciosa* growing are being conducted on some of the best soils at the Reservation. About 20,000 are growing on the fields. This tree will not do good on poor soils and it is a waste of all attempts to plant it on them. It requires a rich sandy and gravelly soil, with plenty of moisture in conjunction. The trees attempted to grow are doing very well to date, but experience has taught that on hard, compact clay soils the trees grow very slow and dwarf and crook so that small benefit is obtained from them. This tree, however, is extensively planted in all parts of the State and the results where planted in good conditions are very gratifying. It demands a great amount of attention to get good results. The cutting back method and yearly pruning of the tender branches must be resorted to for best results.

Black Locust.—There are planted and growing at the Reservation about 50,000 black locust. This tree requires good sandy, gravelly soil or hilly, rocky limestone land for its best development. The trees at the Reservation are planted on selected soils and are doing very well. The great trouble in growing this tree is the attacks from the locust borer. It is a waste to try to grow this tree on hard, level clay land unless planted at good distances apart and carefully cultivated to keep it growing thriftily and pruned to prevent excessive branching. This tree has been most extensively planted and under right soil conditions is doing splendidly, but in all places where it was planted on poor, compact clay soils the borer has played havoc. As a timber tree it is one of the best to grow for posts and fuel as also for lumber for ordinary uses,

but it must have special soil conditions for good development. Its best development is found on hilly limestone lands of southeastern Indiana. No successful remedy is at hand for combating the borer. This tree is a sure grower from seeds, roots, sprouts or cuttings. All that is needed is to get it into the ground, and observe soil requirements and cultivation, and results will follow.

American Chestnut.—The American chestnut is one of the cleanest successful trees to grow on thin, clay, hilly land next to the American ash. Its natural home is the old, abandoned, worn-out fields and knob lands of southern Indiana, Kentucky and Tennessee. The knob lands of the Reservation—500 acres—are now thickly growing up naturally with chestnut. There are thousands of them which in six or eight years will be sufficiently large for line construction poles and crossties. Also there are growing by having been planted from seeds and seedlings about 10,000 trees upon the old fields. The chestnut, like the poplar, has a tendency to grow low and bushy and needs the same care of close planting and constant pruning to cause tall straight boles. This tree can be successfully grown in all parts of Indiana, but it does not fruit successfully north of Indianapolis, only in exceptional cases of good protection and cultivation. It can be transplanted with ease or grown from seeds directly where desired, but it is better to grow the seedlings in nursery and then transplant. The seeds can be secured upon the general market.

Pecans.—The cultivation of pecans as an experiment is being attempted also at the Reservation. This tree grows very well and bears successfully in the lower Wabash Valley and in Indiana along the Ohio River. The growing of the pecan tree for nut production is now receiving a very great amount of attention by nut growers everywhere. The attempts at the Reservation, however, are confined more to the large Texas variety than to the species found growing in Indiana, as indicated before. Seeds of the Texas variety were secured from a seed firm at New Orleans, La., and planted in the fall of 1904. Scarcely a seed failed of growing the following spring, and about 500 fine seedlings resulted. The seed were planted in nursery rows in a low rich spot of ground where they would be less liable to winter-kill. No winter effects whatever have shown upon them and their growth is good considering it is a hickory. Part of the seedlings were transplanted to a new site in the spring of 1907 and reports indicate the transplanting was successful. The trees remaining on the original plat are growing splendidly and so far as growing the tree is concerned it

is successful. The bearing results will be watched with interest by a great many parties interested in them.

A more extended discussion of pecan nut growing is being arranged by Mr. Mason J. Niblack, Vincennes, Indiana, and can be found elsewhere in this report.

English Walnut.—A small effort has been made to grow the English walnut at the Reservation. At the same time the Texas pecans were obtained for planting some English walnuts were secured and planted. The squirrels and other rodents came from far and near seemingly to dig them up. Only fourteen trees were secured from the 500 nuts planted and they have prospered but little. The soil of the Reservation does not seem suited and the climate is too severe. The young trees winter-kill very badly. The English walnut seems to be not suited to a successful cultivation in Indiana unless it might be in exceptionally sheltered localities of great fertility.

Oaks.—A great many thousand oaks of every kind native to Indiana are growing upon the fields at the Reservation from acorns secured and planted during the progress of the institution. The oaks are planted in mixture of themselves and of other varieties of trees. The greater part of the oaks, however, were white and chestnut varieties. Those next in importance of planting were burr, red, and black oaks. A good stand of oaks generally is found upon all the fields planted to the oaks, but the rate of growth is very slow. The oaks are naturally slow, scrubby growing for many years until a firm root system is established. At no time, however, and under no conditions of soil and climate are Indiana oaks fast growers. The chestnut oak is the most rapid of any kinds upon thin lands. It is more native to blue soil and arid conditions and thus is the dominant oak of the knob lands of southern Indiana, Kentucky and Tennessee, but at the same time ranks in quality with the white oak. The red and burr oaks are the next fastest growers of the oak kingdom and the white oak is the slowest. Investigation has shown that a small spindling oak of twelve to fifteen inches height and diameter not larger than a lead pencil may contain a root formation more than a load for one man to carry. The root growth is simply enormous compared to the bole growth. When, however, the root growth is sufficiently formed and the upward growth is then the part of advancement by the natural elements its growth proceeds more prominently and the oak soon takes its place among the other trees and wins out as a sur-

vival of the fittest among trees, and thus the oak is called the king of the forest.

Hickories.—In the same manner and in the same fields were planted all species of hickories. The hickories, like the oaks, have not made much progress. The only difference being that the hickories have made less development than the oaks. All the characteristics of growth stated about the oaks are also true of the hickories.

American Elm.—Twenty thousand American elms were planted upon the fields at the Reservation. They are only doing medium well. The soil and moisture conditions are not suited to growing this tree. It will take more time to tell the success of growing the elm in a general way in the locality. In the moist low grounds it will do good, but on the general fields it don't seem suited. The seedlings set were not the best because they had become heated and mouldy in packing and shipment. They were assorted carefully at planting, but not all the injuries were detected and bad trees were planted. This condition on the whole makes the elm planting look bad.

Kentucky Coffee Tree.—Quite a lot of Kentucky coffee trees were attempted in nursery. Enough seeds were planted for about 100,000 seedlings. The seeds came well and for the first year the young trees did well, but since then but little development has resulted. The trees were attacked for two successive seasons by parasitic insects and the foliage and young shoots badly eaten. This tree is a good tree to grow, but the experiments attempted have not proven successful. The results here given are due to local conditions and must not be understood to be universal.

NOTE.—In all the experiments of tree planting and general forestry work at the Reservation the mensuration data and its tabulations are recorded so that any future measurements may be compared to determine the rate of increase for the period of time intervening. Stone posts are set and marked so that all plats may be easily determined by referring to the Seventh Annual Report of the Department.

Fig. 14. View showing forest growth in the Knobs at State Forest Reservation. The altitudes shown here are about 1,000 feet. The growth is a mixture of pines and hardwoods natural in Indiana.

Fig. 15. A view of second-story or lower forest growth under the large upper forest trees after the tract has been given the cultivation cleaning. The growth is of prime hardwood species.

Fig. 16. View of natural reforestation at State Forest Reservation on a field last farmed the summer of 1903. The growth is a mixed forest growth of prime hardwoods.

Fig. 17. View showing natural reforestation to pine under hardwood growth on knoblands at State Forest Reservation. The absence of fire burning over the knoblands on the Reservation for the last five years has permitted the pine to get a good start at reforestation. The entire slopes and ravines are becoming thickly reforested to pine from seed washed from the knoblands.

Fig. 18. Shellbark Hickory growing in open field at State Forest Reservation. A type of tree the farmer should let grow in his field for nut-bearing.

Forest Fires

This summer and autumn just past has been unusually conducive of forest fires. The dense foliage produced by the excellent moisture and growth conditions which prevailed during the entire spring and early summer was parched and dead from the intense drought at least two months before the time of natural autumn maturing. The leaves were off the trees and heaped upon the ground in dense covering or were still clinging to the trees dry and crisp awaiting the igniting spark. Streams, wells and springs were dry in a proportion to compare disastrously. As a consequence of these prevailing conditions fires have been numerous and continued until burned out by their own limit. The regions most affected were the hilly lands of southern Indiana and the muck lands of the Kankakee regions, although every section of the State was visited by disastrous conflagrations. The more common causes of these fires were the railroad engines, clearing fires improperly guarded, hunters, campers and tramps. Many of the most disastrous fires were for the greater part unavoidable from the sense that all ordinary precautions were observed and cannot be regarded as wilful. It was the conditions beyond the control of man that made them so serious after started. It is well to urge, however, at this late time that greater precautions be taken by railroads to guard against fires from their engines, and also to urge parties putting out fires in clearings to guard them most carefully and to avoid a recurrence of the present damages. The fires started, however, by hunters, campers and tramps are in their very nature wanton and should be dealt with by and to the fullest extent of the law. These fires could be avoided by obeying the merest principles of good citizenship. An organized effort should be instituted against such offenders. Hunting is in itself a lawful engagement, but the hunter who enters upon the lands of another and in pursuit of his quest kindles a fire and recklessly leaves it to spread and destroy the property thereto is but a small consideration above the actual incendiary. The camper is entitled to the same consideration. The tramp who causes such fires should not be entitled to

any consideration beyond that accorded an outlaw and should be organized against most completely.

The public is perhaps very familiar with all these causes and also the probable extent of damages, but the losses for Indiana the past summer and autumn, which aggregate almost a million dollars, should appeal to all fair-minded persons as a matter for serious thought. The losses have occurred and cannot now be prevented. The things which should now claim our attention are the reduction of the causes and thereby the fires, and also to familiarize ourselves with the best means for combating when once the fires are started.

The legislature of 1905 passed an act providing an organization for the purpose of controlling forest fires. If this law were fully enforced it would go far toward relieving the cause and the effect. The law is herewith given and its enforcement is urged as a means that will go far toward the reduction in the causes and the successful combating:

"Section 1. Be it enacted by the General Assembly of the State of Indiana, That any person who shall set fire to any woods belonging to another or shall place a fire on his own property and permit it to spread to the woods of another shall be liable to a fine of not less than \$5.00 nor more than \$50.00, and, furthermore, shall be liable to the owner or owners for the full damages sustained by reason thereof, and it shall be the duty of the prosecuting attorney of the county to faithfully investigate and prosecute each and every case, and any failure to do so by him shall be sufficient evidence for his removal from office, and his bondsmen shall become liable for the full damage hereof sustained.

"Sec. 2. It shall be the duty of the township road supervisor when any woods, as in section 1, shall become on fire in his road district, to employ such help as he may need to extinguish such fire, and himself and such help as he employs shall be paid by the township trustee from the general expense funds of the township at the rate of \$1.50 per day for the time actually occupied in extinguishing such fire."

The methods of fighting forest fires are many. In some States forest fire departments and expensive forest fire equipment for penetrating woodlands and combating fires are maintained at government expense. A large retinue of men are constantly engaged. The Board believes the above law, fully enforced, will be far in advance of any other form of forest fire protection, because of the readiness of organization, if interestedly followed, and the expense of the same is reduced to the minimum and only for the actual employment. It, however, is like any other law not enforced. It is but a dead letter. The provisions of this law put

into effect and the methods here given for fighting forest fires will reach the desired effect.

Back firing is the first and most successful means of checking forest fires. A sufficient force of men placed advantageously in advance of a forest fire and a burned line established around or ahead of the forest fire will see its finish when the two fires meet. This burned line can be formed by having the rubbish raked from a space to prevent the fire's extending only in the direction of the forest fire as it advances. Men following setting fire to the rubbish and seeing that the fire does not get over the line raked will soon place between the forest fire and the working line a sufficient burned over space to prevent the fire's further advance after the fires meet. Sufficient distance ahead of the forest fire should be chosen for the burned line to admit of a good strip in width being burned over by the back fire before the two fires meet, as otherwise the forest fire might overleap the burned line and continue its advance. This plan of fighting fire with fire is the surest method of conquering the forest fire flame. It is the most ready means in the absence of easy water supply, as well as the surest method of checking.

Water-soaked blankets are a good means of fighting fires. Blankets soaking wet in the hands of persons and wielded upon the flames will put them out. A heavy coffee sacking blanket, horse blanket or some similar kinds wielded by the hands as a club upon the flames, using care to always strike so that the flames will be driven backward instead of forward, will be found a splendid means for checking fire if it is not so fierce as to make it impossible to approach close enough to apply this means. The blankets being thoroughly soaked and the strike inward upon the flame will fan it out and at the same time so dampen as to fully extinguish. This is a very successful method if water can be easily secured, and when used during the late evening and early morning when fires burn less briskly.

Throwing earth upon the flames is another method frequently used with fair success. Persons with spades and shovels, by digging up dirt and throwing it broadcast upon the flames, fan and smother them out. Unless care is taken, however, to follow along and extinguish the smouldering fires they will rekindle from under the dirt and proceed again to burn. The first act merely reduces. It takes the last extinguishing feature to make it successful. This method can be used successfully in connection with the soaked blanket plan.

Plowing furrows of dirt ahead of the fires will check them if

they are not so extensive as to leap beyond the furrows and continue. Several successive furrows will act as a barrier, however, for a brisk flame. This furrow plowing can be used to good advantage in forming the back fire line. The difficulty, however, is that furrows cannot be successfully made in the woodland because of the numerous roots.

The law rigidly enforced and the plans here given will eradicate the forest fire menace from Indiana either by prevention or the successful combating if started.

Forestry

Forestry has for its largest meaning and purpose the prolonging of the timberlands of the commonwealth by making the most wise use of the existing timber supply and the application of the best practical and scientific methods of reforestation and cultivation to continue the present forest areas or to grow new ones. Individuals, however, may and do place upon it limited construction to correspond with some special interest or motive. Some extremists contend that forestry means that the commercial uses of timber shall be limited to the smallest degree and that every protection shall be thrown around the present forest areas to prevent their being cut and used except for the most urgent domestic demands. This interpretation is sustained by those who advocate it upon the ground that the public good, but more especially health and hygiene, demand it. The influence of the tree in its organic parts upon the component elements of the air and water in the life-sustaining relations of purification justify such a radical view. This interpretation, however restrictive, has splendid elements of merit, but the hardships and the material losses arising make it of less value for a substantial consideration. The essential elements of industrial promotion are not regarded. Such a view as the extreme would entail an extravagance rebellious to all economic and industrial laws. Right forestry has for its chief aim the enhancement and constancy of a material supply and its right use.

The conditions of the forest areas in Indiana require the broader useful construction. There is but very little large virgin timber left in the present woodlands. Almost every woods now found has been cut over and are very badly thinned, and what large trees remain bear some or even many marks of injury and are exposed so that their value is becoming less each year. Experience and investigation has made it clear that all the old timber is heart decayed, borer eaten, windshaken and rapidly becoming brash and thus rendered less valuable for construction uses. The general condition of old timber at this time justifies its immediate use, and efforts directed toward reforestation in its stead. These condi-

ions prevail because of the changes in the forest essentials. The forest areas are not so dense against the penetration of the sun's rays. They are open to the wind and sun. They are exposed to violent storms. The drainage is altered and their water supply is less than they demand. The humus has been repeatedly burned and grass and weeds cover the area and sap away the moisture.

When a tree shows signs of decay that is the time to use it and replace it with others. The signs of maturity are: Dead limbs at the top, falling bark, worm dust at the roots and in the bark creases, indicating that the worms and the borers are at work, the late leafing in the spring, the early falling or maturing of the leaves, the smallness and wormy condition of the fruit and the dead and brittle nature of the outer bark, indicated by the ease with which it can be crumbled in the fingers.

Timberland owners should therefore study their trees and make the most wise use of them by harvesting when ripe just as he would his grain. If the grain crop is not gathered at maturity loss follows, and the same is true with the tree. But let the harvest be followed by planting, that the woodlands may be perpetuated.

TREES TO PLANT FOR POST, TIE AND POLE TIMBERS.

The kinds of timber which have been almost exclusively used for these purposes is rapidly becoming exhausted, and an effort must be made to meet the future demands by growing them under cultivation. Farmers are finding difficulty in securing good fence-posts at reasonable prices, railroad companies are resorting to inferior grades of timber and treating them chemically to supply them with crossties, and line construction companies are compelled to pay fancy prices for poles used in telephone and telegraph building, and every sign indicates that the demand will be larger as years pass. Farmers can meet these demands at good profit by cultivating a part of their land to timbers suited for these uses.

The trees given here are some of the best for these uses and are all rapid growers:

Chestnut.

The natural range of the chestnut is from southern Maine to the Gulf of Mexico. It thrives well throughout the Mississippi Valley.

The soil best suited for the growth of chestnut is retentive clay containing some sand or at least porous. It does not demand a rich soil and does excellently on old, abandoned fields. The chest-

nut will endure the heat and cold of the temperate climate and will grow very well in sunny, dry situations.

The wood of the chestnut is light, strong, coarse-grained and inflexible. It splits very readily and is exceedingly durable in contact with the soil. It is used in cabinet making and for interior finish. In all sections of the country it is prized very highly for use as railroad ties and telegraph poles. It makes very durable posts, and is also valuable for shingles. Its rapid growth and tendency to reproduce by coppice makes it a valuable tree for these uses. The chestnut grows very rapidly in good situations. The trunk of the tree grows tall, tapering and free from limbs.

The chestnut reproduces from seed and from sprouting from the stump after cutting off. The growth from stumps with good root systems is very rapid, and cuttings can be made about every twelve years. The seeds ripen at the time indicated in a preceding article and they may be planted as soon as mature or may be stored and planted in the spring. It can be grown well from seedlings, as they bear transplanting successfully. The best distances to plant are 5 x 5 feet or 6 x 3.

I consider this one of the finest trees for farmers to plant because of its clean nature, lasting qualities for all the uses given and its ease of cultivation. The trees should be pruned when young to form the correct boles.

Catalpa.

The *catalpa speciosa* occurs naturally on the deep, fertile soils of the valleys of southern Indiana, Illinois, western Kentucky, Tennessee, southeastern Missouri, northern Mississippi, Louisiana and northeastern Texas. In the most favorable localities it attains a height of from 60 to 80 feet, occasionally reaching 100 feet. The diameters range from 2 to 4 feet. This has proven to be a valuable tree, hence at the present time has become exhausted along with the other valuable kinds, so that now it is rare that a fine tree can be found. It is capable of a much more extended range than is given it. It has been successfully propagated as far north as 41 latitude and as far west as 100 longitude. I do not believe that there is another tree capable of stronger soil adaptation than the *catalpa*. It is especially adapted to deep, fertile, porous soils, and thrives well where there is an underflow of water within 10 or 12 feet of the surface, even in slight rainfall. Because of these attributes it is successful throughout Indiana, with the exceptions of the stiff clay soils, and a mistake will be made if it is planted on such soils, no matter how much attention and care may be given it.

The catalpa is a rapidly growing tree, when congenially located, for a period of 50 years and more. From 15 to 25 years are required to grow trees suitable in size for telegraph poles and railroad crossties, while for fence posts from 8 to 12 years are required. It is most readily propagated from seeds sown in the nursery in the early spring. The seeds can be easily obtained from seedsmen. They ripen in October and can be gathered and safely kept through the winter in a cool, dry place. The nursery site should be of rich, mellow soil, finely pulverized. The nursery rows should be for hand cultivation, 18 inches apart, but for horse cultivation they should be 3 feet apart. If the proper attention is given the nursery the seedlings will be of sufficient size for planting the following spring. Owing to the fact that it is difficult to grow the catalpa with straight boles, extra caution must be taken to force the right form of trunk. It should be planted at distances of 5x5 feet or 6x3 feet, and not to exceed 6x6 feet under the most favorable conditions. The tendency of the catalpa seems to be to branch and crook in growing. If it is planted closely the lateral branches die before they attain any size and are easily pushed off without causing any damage, but otherwise they remain and cause permanent damage to the body of the tree. New wood is formed around the branch and thus leaves a hole into which water is conducted and the tree becomes affected by rot in the heartwood. In addition the close planting causes them to grow up in search of light and thus checks the tendency to crook. The difficulty to straight trunks is the serious drawback to the catalpa. The surest method of overcoming this evil is to cut the trees back to the ground at the end of two or three season's growth. The extensive root system formed will cause vigorous sprouts to put up from the stump. In midsummer following the cutting back they should all be removed but the one must be thrifty, which if left is soon forced upward in a long straight bole, free from the numerous branching. At the end of the same time a great advantage is gained by doing this, though it may appear like destroying the two or three years' growth. It can be grown successfully in pure or mixed plantings with the walnut, locust, ash or Kentucky coffee tree. In case planters do not care to grow seedlings for planting there are nurseries throughout the West which grow them for wholesale planting at a very small cost per thousand.

There is difficulty in planting the catalpa by not being able to distinguish the varieties. There are at least four different species, two being shrubs and two fully developed trees. The Warder

speciosa or hardy catalpa can be distinguished as follows: The leaves are from 5 to 12 inches long, heart-shaped, long pointed; the flowers are about 2 inches long, nearly white, faintly spotted, the lower lobes somewhat notched; the bark is rough and thick. The other species (*Catalpa bignonioides*), which is also a large tree, has about the same shaped leaf, but has scaly glands in the axils of the large veins on the under side, entire, usually, angulated, opposite and sometimes in groups of threes, very downy beneath when young. The flowers are much spotted with yellow and purple and with the lower lobe entire; the pod is long and thin; the bark is lighter in color and not so rough and thin. The other kinds are mere shrubs and at no time could be mistaken for the larger kinds. The former one is the tree to plant for economic uses.

There are two forms of disease which infect the catalpa, the wood rot and the leaf blight. The wood rot may be classed as two kinds, the soft and the brown rots. Both are caused by the decay of limbs which are left on the tree till growth takes place around them, thereby leaving holes into which water is conducted as heretofore mentioned. The remedy is to prevent any such conditions by pruning and daubing over the cuts so that fungi pores can not get in to form such rot. Right planting, pruning and treatment by daubing the cuts made will avoid such difficulties. The blight of the leaves is due to the larvae of *Diplosis*, a gall-gnat. The affection is evident by the leaves, shoots and buds turning black, shriveling and dying. Trees which are affected several years in succession show the effects by the numerous sprouting of the limbs and trunk. No good remedy is known at present.

Kentucky Coffee Tree.

(*Gymnocladus dioicus*.)

The natural range of the Kentucky coffee tree is the northern two-thirds of the Mississippi Valley. This is one of the rarest trees of North American forests. Its range for economic planting is coincident with its natural range. It should be planted much more frequently in the future than in the past. In barren soil it is a slow-growing, long-lived tree. In fertile river valleys it grows more rapidly; it produces the best results on the richest bottom lands, but will thrive on sandy or gravelly uplands. This tree will endure the extremes of climate.

The wood is heavy, moderately hard, coarse-grained, strong and

very durable in contact with the soil. The sapwood is thin and the heartwood of a rich reddish-brown is very suitable for cabinet work and interior finish. The timber is but little known at present.

The Kentucky coffee tree sometimes attains a height of 100 feet and a diameter of 3 feet, but it is usually much smaller. The trunk usually possesses a very uniform thickness and is tall and free from limbs.

This tree reproduces from seeds, which are borne in pods by the pistillate individuals in great abundance. In starting a forest plantation of this species it is much better to plant the seeds in nursery rows and transplant the trees into the final forest site at the end of the year than to attempt to grow the trees from seeds planted in the permanent site. The Kentucky coffee tree develops a root system which adapts it to transplanting.

The pods should be collected in the late fall and macerated in water to remove the seeds. After the seeds have been separated from the pods and dried reasonably they should be stored in sand to weather.

The rules for planting the coffee tree are the same as for the chestnut and locust.

The Kentucky coffee tree is a light-demanding species. It can not keep the grasses and weeds in subjection when planted alone, owing to the open nature of the foliage and to its habit of leafing out very late in the spring. In nature it grows associated with the ash, walnut, hickory and elm. When making a forest plantation of this species it should be mixed with such trees as the white elm, red elm, hackberry, oaks and ashes. If planted several years previous to its associates it may be mixed with hardy catalpa, Russian mulberry or black locust. The growth and the habits of this tree in the Southwest are very similar to those of the walnut. It can be substituted for the walnut in almost any planting or use.

Black Locust.

The black locust was originally indigenous in the mountainous regions from Pennsylvania to Georgia, and especially Arkansas and eastern Indian Territory. But at the present, through cultivation and other agencies, it has become naturalized throughout the United States east of the Rocky Mountains. It is appearing naturally abundant upon the abandoned hillsides in the States of Pennsylvania, Ohio, Indiana, Kentucky, and in the southern portion of the plains west of the Mississippi to the mountain slopes. It is

associated with other deciduous trees in the form of small scattering groves.

There is an objection offered against the black locust on account of its sprouting and spreading tendencies from the root. I do not consider this a sufficient cause to militate against the planting of this tree for economic purposes. A casual observation will convince that most any tree does equally as bad, but nevertheless caution should be taken to confine it where planted. The seeds should not be allowed to become scattered over the farm by being hauled out in the manure or otherwise. A row of osage, soft maples or other dense shading trees planted around the locust planting will prevent spreading.

The growth of this tree is very rapid in all rich, loose soils. It attains its maturity at about fifty years and the usual size is about eighty feet in height and from two to three feet in diameter, depending largely on the distances planted as to its trunk formation. The largest and quickest matured specimens are found in deep, loose clay, valley and bottom-land soils, though it grows successfully on poor soils if sandy or gravelly, and it is shown to be the most durable wood when grown on such lands. The locust should never be planted in hard, wet clay soils, as its roots are surface spreading and draw nourishment from the surface, and hence in such soils can not penetrate sufficiently to insure a good strong growth.

The black locust is finding extensive use for posts, ties, telegraph poles and vehicle manufacture. Its great durability in contact with the soil, its toughness and elasticity of fiber make it valuable for these uses. A post from six to eight inches in diameter can be grown in from 10 to 12 years in good soil. Unlike many other timbers, the young wood is almost as durable as the old. Posts of such character last from twelve to twenty years, though extremists say much longer. This tree is a most valuable one for fuel planting.

The planting to secure good results, should be close, 5 by 5 feet or 3 by 6 feet. They should be pruned when young to aid in forming straight, long boles. Every effort should be made to keep the trees thrifty and growing, to prevent attacks from borers. To this end the grass and weeds should be kept out till the growth is large enough to protect itself. The planting should be watched to make trimmings at the proper times to prevent the decay and injury by crowding and smothering. A thrifty growth is seldom attacked by borers. The locust grows well in mixture with the catalpa, elm, ash and walnut.

The black locust is propagated from seeds and root cuttings. The seeds retain vitality for years if kept in the pods or buried deep in the ground, seven years having been known to find good vitality remaining. The seeds ripen in July and August and may be planted at once or kept in storage till spring and then sown in nursery rows. The seedlings should be propagated in the nursery bed and transplanted to the permanent places in the plantation the following fall or spring. If the nursery is to be cultivated by hand the rows should be from 15 to 18 inches apart, but if by horse cultivation the rows should be $3\frac{1}{2}$ to 4 feet apart. A pound of seed contains about 2,800 in number and is sufficient for a row of nursery 900 feet long. The nursery site should be in rich, pulverized loam. To secure the best degree germination the same year they are planted, they should be treated to soften the stone shell of the seeds. The seed should be removed from the pods and kept stored by placing in boxes, stratified in layers of sand, kept moist during the winter until time to plant. They must be placed in a box and buried in the ground so that the water will not settle upon them, and let them remain until time to plant in the spring. Freezing and thawing will add benefit to the result.

Nursery-grown seedlings can be secured at a very low cost per thousand from reliable firms engaged in growing forest tree stock for wholesale planting. Any seed firm can secure the seeds for its patrons.

I do not anticipate that there are many who do not distinguish the black from the honey locust, but I have frequent inquiry concerning the difference of these two trees. In short, the characteristic differences by which they may be known are as follows: The black locust has reddish-brown, rough bark, broken in ridges; the leaves are compound, alternate, rounded at both ends, entire, netted, veined, occasionally tipped with the end of the midrib and covered with silvery short hairs when young; the flowers are white, fragrant, and in loose axillary racemes; the seedpods are linear, smooth, short, contain from 4 to 6 brown seeds and hang on the tree over the winter. The honey locust has rough gray bark broken into scales at the base of the trunk; the young branchlets are a deep reddish-brown; the leaves are compound, alternate with long, downy leaf stalk, smooth, green above, yellow below and from 10 to 20 long oblong leaflets tapering towards the apex and rounded at the base; the flowers are greenish white and grow in narrow racemes; the seedpods are from 9 to 20 inches long, reddish-brown.

flat, linear, curved, contain between the seeds a sweet substance and seldom hang on the tree during the winter.

The honey locust is usually very thorny, while such is seldom the case with the black locust.

Osage Orange.

The osage orange thrives well throughout the same range as the chestnut, though it has been more widely introduced by cultivation. The soil best suited for its growth is deep, rich, clay loam, retentive of moisture.

It has been extensively planted for hedge throughout the Central States, but it should be more frequently planted as a timber tree. It sometimes gets winter killed in the northern part of this State.

The growth of the osage for the first few years is very rapid. It never makes a large tree, and matures in a reasonable period of time. The tree when standing alone has a tendency to branch very profusely. It is this habit which renders it of such great value as a hedge plant. If crowded, it can be made to grow into a form which adapts it for posts. The osage orange reproduces by sprouting from the stump, from the roots and from seeds, which are borne in great abundance by the pistillate individuals. The ripe fruit containing the seed is a fleshy, globular, yellow mass with roughened surface, somewhat resembling the orange. The fruit should be collected in the fall as soon as ripe, macerated and the seeds washed out and stored in sand. Seedlings of this tree can be bought cheaper than any other kinds from the nursery firms.

A good method of planting the seed is in the bottom of a furrow made by a plow. They should be covered about an inch and a half deep. The seeds may be planted where the trees are intended to stand, or they may be planted in a nursery and the trees transplanted to their final site at the end of the year. The right distances of planting are same as the chestnut.

The osage orange reproduces from coppice very readily. This quality allows the planter to continue to take successive crops of posts from the same plantation for years. The young shoots grow up from the stump with such vigor that the second crop is more likely to consist of straight, smooth post timber than the first crop.

The osage orange is a shade enduring tree. The thorns of the tree make it often undesirable to plant. The osage orange does well in either pure or mixed plantations. In this way thick plant-

ing may be practiced and the need of inner tillage reduced to a minimum.

Black Walnut.

The range of the black walnut is west from Massachusetts to Kansas and south to Florida and Texas, covering practically the Middle Atlantic, Central, Southern and a portion of the New England States. It was formerly abundant throughout this range and is undoubtedly a sure tree for economic and commercial plantings in the Mississippi Valley from Minnesota southward. The soil best adapted to the growth of the walnut is fertile alluvian containing large quantities of humus. It thrives best in porous, open subsoil, such as is found in low river bottoms. The walnut is subject to injury by exposure to hot winds and extreme cold, therefore some judgment should be exercised before planting it in the northern and western ranges, though any part of Indiana, climatically, is free from such influences.

The wood of the black walnut is rather heavy, hard, strong, rich dark brown color and easily worked, hence highly prized in fine finish and cabinet making. It is also a lasting timber in contact with the soil. The walnut is a rapid growing tree in good soil. At maturity it attains a diameter ranging from 4 to 6 feet and an average height of nearly 100 feet. No other tree excels it in clear straight trunk when planted in close proximity, 4 by 4 feet or 6 by 3. The walnut matures to good value in 20 years, though the best value is not below 40 or 50 years. It grows rapidly for the first 20 years, but a great amount is sapwood, but from then on the growth is slower because the sapwood is transforming into heartwood and the older the tree becomes the more valuable it is. No walnut plantings have been made and harvested from which to estimate the value per acre to the planter, but from all theory involved it surely is a safe financial enterprise.

The walnut is best propagated from the seed planted in the fall of the year or stored by stratifying in the ground or in damp sand in boxes till spring, and then planted. The stratification should be where the seeds may be exposed to freezing and thawing in order to soften the stone shell and insure quick germination. It will do well in mixed plantings with the elm, ash, hickory, locust, poplar, and maple, if care is exercised to prevent its being shaded out or overtopped. When planted at the distances indicated above and thinnings properly made to secure thrifty growth, I feel confident of the financial success of the walnut planting.

Wild Cherry.

The range of natural growth for the wild black cherry is from Novo Scotia westward to the Great Lakes and to the Dakotas and south to Florida and Texas. It, like the black walnut, thrives best in the Middle Atlantic and Central groups of States, but is not found so abundantly in the open prairie. In the dense forest regions of the natural range the cherry was formerly a conspicuous part of the forest, growing on the rich soils, but like the other valuable hardwoods it has been sought to the almost complete exhaustion of the valuable trees at the present; especially is this so in Indiana.

The range of the economic planting of the wild cherry is extensive, though nowhere is it surer of successful propagation than in Indiana, but seeds and seedlings of southern acclimation will not thrive in northern latitudes. By observing this caution, the bad weather killing of many wild cherry plantings of northern sections can be obviated.

The wild cherry is a rapidly growing tree, though short-lived, hence a splendid tree to plant in mixture where thinnings are necessary to make room for the expansion of longer-lived kinds. In timber regions it grows to considerable size, forming a long symmetrical trunk, making it a valuable tree for saw and veneer mill purposes. In economic plantings it should be planted at close distances, 4 by 4 feet or 6 by 3 feet, in order to force a long bole, and then many thinnings for the expansion of the remaining trees. The wood of the cherry is a reddish-brown color, hard, fine-grained, durable, strong, heavy and takes on a fine satiny polish. Because of these qualities it is sought for fine interior finish and cabinet making.

This tree propagates readily from the seeds, which may be sown as soon as ripe in the fall, or they may be stratified and allowed to freeze during the winter. The manner of stratification is the same as indicated in the discourse on the black walnut. The seeds can be planted in nursery rows and transplanted to the permanent sites when the seedlings are one or two years old, or may be planted in the site where the tree is to grow. I recommend the storage process for the seeds and the nursery planting as against the direct planting of the seeds in the permanent sites. It is a light demanding tree, therefore should not be planted in mixture with trees that will out-grow and overshadow it. It can be safely planted with elm, walnut, locust, birch and ash.

Preservative Treatment of Fence Posts

By HOWARD F. WIESS.

GIFFORD PINCHOT, Forester.

INTRODUCTION.

Satisfactory fence posts are each year more difficult to secure. Substitutes, such as reenforced concrete and iron, are probably too costly to compete with wooden posts, and the only solution of the difficulty lies in the use of cheaper woods and in preventing decay by preservative treatment.

Statistics do not show the actual consumption of wood for fence posts in the United States. The cut of posts by logging and timber camps in 1900 was given by the Twelfth Census as 8,715,000, valued at \$606,000, and in 1906 the Northwestern Cedarmen's Association reported a cut of 15,200,000 cedar posts in the Lake States, Michigan, Wisconsin, and Minnesota. Neither of these estimates, however, includes the posts cut by farmers from their own woodlots, which far exceed in number the posts sold. The total cut is therefore very large.

The more expensive kinds of wood, such as white oak and cedar, which have long been used for posts, are now too scarce and too much in demand for other uses to allow of their meeting the demand for posts.^a Fortunately most of the so-called "inferior" woods are well adapted to preservative treatment. This is especially true of the cottonwoods, aspens, willows, sycamore, low-grade pines, and some of the gums. When properly treated these woods will outlast the best grades of untreated timber and are therefore cheaper and more satisfactory. It is the purpose of this circular to show how fence posts may be treated and with what results.

CAUSES OF DECAY.

To appreciate the value of any preservative treatment, it is necessary to know what causes decay, and how a preservative treatment tends to prevent it. Briefly, decay in timber is caused by the action

^a In certain regions it is a paying investment to plant rapid-growing trees, like black locust and catalpa, especially for posts. Information on this subject is given in publications of the Forest Service which deal with forest extension and replacement.

of bacteria and fungi—low forms of plants—which require for their development definite amounts of air, water, heat and food. If one or more of these factors can be eliminated in whole or in part, bacteria and fungi will not develop and the wood will not readily decay.

It is well known that wood decays first where it comes in contact with the ground. This is because the fungi find there the conditions most favorable for their growth. Protection is therefore most needed at this point. When wood is fully exposed to the air, as in the tops of posts, the moisture is rapidly evaporated and decay is very slow. In the case of some woods, however, such as cottonwood and maple, a treatment of the top is necessary.

PRESERVATIVE METHODS IN USE.

A number of more or less crude methods have been tried for prolonging the life of fence posts. These have brought out certain points which may prove of value if more efficient treatment can not be undertaken. Chief of these are the following:

A seasoned post is better than a green post; hence posts should be as dry as possible before being set.

Setting a post small end down does not check its decay.

By piling stones around the base of the post or setting it in masonry or concrete, vegetation is kept away, better drainage is secured, and the post is kept drier. The slight gain thus secured does not, however, justify the cost.

Charring the butt of the post, if properly done, gives good results. Only thoroughly dry posts should be charred, and the charred surface should extend at least 6 inches above the ground line.

Soaking the posts in a solution of copper sulphate is not recommended, since the salt is too soluble, and will therefore more quickly leach out. Soaking in mercuric chlorid takes so long that it can not be recommended to farmers or ranchmen. This solution, moreover, is extremely poisonous and must be handled with great care.

Good results are sometimes obtained by boring holes diagonally into posts just above the ground line and filling them with some preservative solution, such as various forms of coal tar. This method gives the best results with soft woods, like sycamore and cottonwood. Boring the holes, however, weakens the posts.

If the butt of a post is painted with or plunged into a hot solution of carbolineum or creosote, very good results can be obtained. The posts should be thoroughly dry, in order to prevent internal

decay and exposure of the inner untreated wood by checking. Next to impregnation with these materials, this method is doubtless the best.

Creosote^a has been used for preserving wood since 1838. Timbers impregnated with it have had their durability increased tenfold.

EXPERIMENTS BY THE FOREST SERVICE.

Description of the Experiments.

The first experiments by the Forest Service in creosoting fence posts in this country were made in cooperation with the Bureau of Plant Industry during the Louisiana Purchase Exposition, at St. Louis, in 1904. Posts cut from maple, elm, sycamore, ash cottonwood, sassafras, hickory, black walnut, water oak, willow, and red oak were treated. Experiments were afterwards made at Ellwood and Los Angeles, Cal., with blue, red, and sugar gums and ironbark—all species of eucalyptus. As in all first experiments, the results were chiefly valuable in indicating the right direction for later work.

In November, 1906, experiments were made at St. Anthony, Idaho, in treating fence posts cut from fire-killed lodgepole pine. One of the objects of this work was to test further the points brought out but left inconclusive in the previous experiments. The number of posts used in some of the St. Louis tests was too small to yield reliable averages. Wood of the same species is very variable, even when grown, cut, and seasoned under the same conditions, so that two pieces may be given exactly the same treatment and yet show different absorptions and penetrations. To define the effect of any particular treatment it is necessary, therefore, to average the results of many tests. The experiments at St. Anthony were arranged with the object of determining how absorption and penetration are affected by—

- (1) The temperature of the creosote.
- (2) The duration of the bath in hot creosote.
- (3) The duration of the bath in the creosote as it cools, after the heat has been shut off.

^a By creosote is meant dead oil of coal tar. In the making of coal gas, coal is subjected to high heat without the presence of sufficient air to permit combustion. This process gives two main products—illuminating gas and coal tar. The coal tar is then distilled and separated into the light oils, the dead oils (creosote), and pitch. Creosote can be obtained by the barrel in many of the larger cities of the United States.

The experiments were divided into three series, as follows:

Series A.—To determine the minimum efficient temperature for the hot creosote, so as to reduce the vaporization of the creosote and the consumption of fuel.

Series B.—To determine the minimum efficient duration of the bath in hot creosote, so as to reduce the vaporization of the oil, the consumption of fuel, and time of treatment.

Series C.—To determine the minimum efficient duration of immersion in the creosote after shutting off the heat, so as to economize time in treatment.

FIG. 1.—Diagram of an experimental tank used for treating fence posts.

The results of these tests are given on page 139.

Apparatus used.—In the experiments at St. Louis and in California the apparatus used consisted of a cylindrical tank made of 3-16 inch sheet iron, about 4 feet in diameter and 4 feet in depth, with a perforated iron plate in the bottom. The tank was built on the side of a hill in order to facilitate the handling of the posts, and was set upon brick piers so that a fire could be built under it. Creosote was then poured into the tank and the posts were placed in it. The total cost of such a tank is about \$45.

The apparatus used at St. Anthony (fig. 1) consisted of a rectangular galvanized-iron tank 5 feet 4 inches long, 2 feet 3 inches wide, and 3 feet 6 inches high. This tank was set snugly into a wooden box built of 1-inch planks and open at the top. The object of this box was to keep the tank from bulging when filled with creosote, to protect the tank from injury, and to keep the creosote from cooling too rapidly. When the posts are treated in winter or in cold regions it is best to build an additional casing around the inner box, leaving a space of about 4 inches between them, and firmly packing this space with sawdust. The creosote will then seldom solidify over night and may be more quickly heated.

The creosote was heated by fitting a series of seven 1-inch steam pipes in the bottom of the tank, coupled to the boiler of an engine. The amount of steam passing through the pipes was controlled by two valves—one placed between the tank and the boiler, to regulate the amount of steam entering the coils, and the other at the outlet of the coils to control the pressure. By raising or lowering the pressure of steam in the coils the creosote could be heated to any temperature desired. An apparatus of this kind makes it possible to keep the temperature of the creosote fairly constant, and gives very satisfactory results. It can of course be used only when some kind of steam boiler is available. It costs about \$30.

Tanks similar to those described give best results, but if means are not available for their construction an old iron boiler or like vessel can be used. The essential requirements are that the creosote shall be heated in the vessel to about 215° F., and that the butts of the posts shall be submerged up to about 6 inches above their ground line. In special cases, where a thorough top treatment is necessary, the vessel should be of sufficient size to allow the whole post to be submerged.

Results.

The Forest Service has so far experimented with 18 kinds of wood cut for fence posts. In the accompanying table the species

are arranged in five groups, according to the manner in which they absorbed the creosote during the experimental treatments. The posts, in all cases, are peeled. By hot creosote is meant that which has a temperature of about 215° F.

TABLE 1.—*Results of treating fence posts.*

[All of the posts were round, except the sycamore and cottonwood, part of which were split.]

Lodgepole pine.....	do.....	1	12	1.25
Do.....	do.....	1	6	1.25

a In posts of the species shown in Group I the creosote will be found principally in the pith rays and the tubes called "vascular ducts." It is best to stand these posts butt up after treatment, so that the free oil in them will run toward the top.

b Water oak and maple of Group II, quaking aspen of Group III, willow of Group IV, and sycamore and cottonwood of Group V should be given top treatment.

The heartwood of sycamore and cottonwood takes treatment readily and posts of these woods may therefore be either round or split.

A post may be top-treated by simply plunging its top into hot

creosote, or by applying creosote with a brush, like paint. The former method, however, is better, because it allows the creosote to penetrate all the season checks, and any surplus creosote runs back into the tank and is used again. The brush form of top treatment should not be given while either the wood or the air is cold, because the creosote will then simply harden upon the surface instead of penetrating into the wood. If the decay in the top is very rapid, as in the loblolly pine posts in the South, the best results are obtained by impregnating the whole post with creosote. In such cases the heating tank should be of such size that, when filled with creosote, the posts will be completely submerged.

The results of the series of tests outlined on pages 139 and 140, which show the effect of the temperature of the hot creosote and of the duration of the baths in hot and in cold creosote, are given in Table 2.

TABLE 2.—*Effects of the temperature and the duration of treatment on posts of fire-killed lodgepole pine.*

	2	192	1	14	1.48	2.42	2.0	32
	3	180	1	6	.86	1.48	1.9	32

a To test the effect of temperature.

b To test the effect of the duration of the bath in hot creosote.

c To test the effect of the duration of the bath in cooling creosote, the heat being shut off and the creosote being allowed to cool gradually.

Series A shows that the hotter the creosote the greater the absorption and penetration. Series B shows that within fixed limits increased duration of the bath in hot creosote (other factors being equal) gives greater absorption and penetration. Series C shows that the same holds true for cooling creosote. The table shows that there is no exact relation between penetration and absorption. A detailed discussion of the causes for this or the determination of the controlling factors would be chiefly theoretical, and hence is not included here.

The object of these tests, as has been said, was to find a com-

mercial treatment which could be recommended. With the average penetration fixed at about $1\frac{3}{4}$ inches, this is found in run number 4 in Series B and run number 3 in Series C.

It should be remembered that the creosote used in this experiment contained a large amount of naphthalene, a substance which easily vaporizes, so that the consumption would be materially smaller than that here given if a heavier grade of creosote were used.

A point not conclusively tested in any of the experiments to date is the effect of a long period in hot creosote with a short period in cold creosote. It is claimed that this operation will give the most economical treatment, because the rarefaction of the air in the wood cells will be greater both in degree and in amount, which will cause a strong vacuum resulting in a maximum depth of penetration for a given amount of creosote absorbed. This method of treatment may prove very valuable where a heavy grade of creosote is obtainable, particularly in localities where fuel is cheap.

COST OF TREATMENT.

The total cost of treated fence posts varies so much in different regions that general figures are out of the question. Since the users of fence posts in various parts of the country know the cost of untreated posts, only estimates on the cost of treatment must suffice. If the determining factors are known the cost of treatment in any locality can easily be estimated.

The cost depends upon the cost of the apparatus, the price of labor, the number of posts treated per day, the absorption of creosote per post, and the cost of creosote.

The cost of the apparatus may be merely nominal if an old boiler is used. An apparatus like that used in the experiments costs from \$30 to \$45.

The price of labor varies with the locality. It can easily be ascertained.

The number of posts that can be treated per day depends upon the size of the tank and the size and form of the posts. In general, a tank with a bottom 12 square feet in area will hold between 40 and 50 posts 6 inches in diameter at the butt. With such a tank this number of posts would be the daily capacity, except with lodge-pole pine posts, with which two runs per day can be made.

The absorption of creosote per post for the species included in Table 1 is about as follows: Group I, 1-10 gallon; Group II, 4-10

gallon; Group III, 6-10 gallon; Group IV, 2-10 gallon; Group V, 7-10 gallon.

The price of creosote varies at present from 10 cents per gallon in the East and Middle West to 27 cents per gallon in the Rocky Mountain States. On the Pacific coast it is about 16 cents per gallon.

If a man does the work himself, or in cooperation with his neighbors, the cost per post will, of course, be much less.

In general, the cost of treating a post will vary from 4 to 15 cents, depending upon the factors just given. In order to get the total cost of a treated post, the cost of the treatment must, of course, be added to the cost of the post. A post properly treated should give service for at least twenty years. To indicate more clearly the advantage of treating, from the standpoint of the consumer, the following example from Idaho is given:

TABLE 3.—*Comparative costs of untreated and treated posts of lodgepole pine in Idaho.*

	Untreated.	Treated.
Initial cost of post.....	\$0.06	\$0.06
Cost of treating post.....	.00	.15
Estimated cost of setting post.....	.12	.12
Total cost of set post.....	.18	.33
Estimated length of service..... years..	4	20
Annual cost of post (allowing 6 per cent interest on investment) approximately.....	\$0.05	\$0.03

In this table the treatment approximately corresponds to that given in run 4 of Series B and run 3 of Series C, Table 2, where the average penetration of the creosote is about $1\frac{3}{4}$ inches and the cost of the creosote about 20 cents per gallon. One man can treat each day 100 lodgepole pine posts with a 6-inch top diameter in a tank similar to that shown in figure 1. The cost of the tank and fuel is not included in Table 3, for they are altogether too variable. These items, however, are seldom large enough to affect materially the comparison of cost. The estimated costs given in both cases are based upon the time taken in fencing, assuming that all work is paid for and not done by the owner.

It can be seen that the annual saving is about 2 cents, so that at the end of twenty years, with conditions similar to those given in the example, a creosoted fence will be about 40 cents per post cheaper than one untreated. A table of cost like the above is necessarily very crude, since the factors composing it are extremely

variable, but it tends to impress somewhat forcibly the saving effected by the use of treated posts, even though their initial cost is high.

CONCLUSIONS.

The principles which follow are of general application in fence-post treatment. Local conditions, of course, may require the operator to modify them somewhat to meet his particular requirements.

Selection and Preparation of Posts.

The resistance of all treated posts to decay is alike, regardless of the kind of wood used, hence only the cheaper woods should be used, and the more valuable kinds should be saved for other purposes. Since sapwood can be impregnated better than heartwood, posts with much sapwood are the best.

Posts cut from woods whose heartwood can not be treated (see Table 1) are the best left round. When the heartwood takes treatment readily either round or split posts may be used.

Posts should be air dry before they are treated or set. They should be cut at least a month before treatment. Wood dries fastest in spring or summer, but with those species which check badly, such as the oaks, cutting is best done in autumn or early winter.

Even the inner bark should be removed before the posts are treated or set, especially from that part of the post submerged in the creosote. Bark reduces the penetration of creosote into the wood, besides itself absorbing the creosote without increasing the durability of the post.

The tops of posts should be cut slanting, preferably with an ax, so that rain water will not remain on them. When they are cut with a saw the pitch should be greater, especially in posts in which there is a marked difference in hardness between the springwood and the summerwood.

Treatment.

If butt treatments in the open tank can not be given, and yet some preservative method is desired, plunge the butts of the posts into a vessel of hot creosote or carbolineum, or apply either liquid with a brush. Application of any of the methods mentioned on page 6 will tend to make the posts more durable than they would be if set green.

Whenever possible use an apparatus similar to the one described on page 9 for open-tank treatments.

Use as heavy a grade of creosote as can be obtained.

Aim to get the creosote to soak as far into the posts as possible. With woods having shallow sapwood (about one-half inch deep) treat all the sapwood. With woods having deep sapwood, or with heartwood that takes treatment readily, secure a penetration of at least 1 inch. The heartwood of very few species can be treated. For this reason round posts are better than split posts, since a penetration is obtained entirely around them. Species with a deep sapwood, like lodgepole pine, will absorb much more creosote than species with shallow sapwood, like chestnut.

A long bath in hot creosote, followed by a shorter one in cold creosote, will probably give the best results. Usually, woods with a porous structure, like the poplars, can be treated more easily than dense woods, like the oaks, and hence need not be left in the creosote for so long a time.

Never heat the creosote above 250° F. In most cases a temperature just above the boiling point of water is best. Heating the creosote above 250° F. weakens the wood and causes a large amount of creosote to vaporize.

Never brush-treat posts when the air or the post is so cold that the creosote simply solidifies on the surface of the post.

Keep the posts as dry as possible before treatment, and keep rain and snow out of the tank by roofing it, if necessary.

JAMES WILSON, Secretary.

WASHINGTON, D. C., October 22, 1907.

Progress in Chestnut Pole Preservation

By HOWARD F. WIESS.

GIFFORD PINCHOT, Forester.

INTRODUCTION.

This circular includes only points not developed in the former publications of the Forest Service^a on similar subjects, and is based largely upon the results of a series of experiments conducted at Parkton, Md., from August, 1905, to June, 1907, in co-operation with the American Telephone and Telegraph Company.

In former experiments it was found that poles to all appearances alike showed wide divergence in their behavior during seasoning and preservative treatment. The differences were supposed to be due to the conditions of growth, but those conditions had not been exhaustively studied; hence, in the later experiments studies were made of the trees from which the poles were cut. A complete history of each pole—its life, seasoning, and treatment—was thus obtained.

The general plan of seasoning and treating was the same as that practiced in former experiments. The same apparatus was used, but the method of application was modified somewhat to obtain more specific information.

Statistics compiled by the Forest Service^b show that 3,574,666 poles were purchased in 1906 in the United States for telegraph, telephone, electric-light, and street-railway uses. Cedar combines more desirable qualities for poles than any other wood, and 61 per cent of the poles used were cedar. Chestnut ranks next and supplied 28 per cent. The average age of a 30-foot cedar pole is about 190 years and its length of life about 15 years. We therefore consume such a pole over twelve and one-half times as fast as we can grow it. Cedar does not sprout from the stump, and its reproduction is a difficult problem. A chestnut pole of the same size can be grown under favorable conditions in about 42 years, and will last, on

^a Circular 103, "Seasoning of Telephone and Telegraph Poles;" Circular 104, "Brush and Tank Pole Treatments;" Circular 136, "Seasoning and Preservative Treatment of Arborvitæ Poles."

^b Circular 137, "Consumption of Poles in 1906."

an average 12 years. We consume such poles, then, only about three and one-half times as fast as we can grow them. Moreover, reproduction of chestnut is an easy problem, for it sprouts vigorously and prolifically from the stump.^c From four to five crops of chestnut poles can be grown to one of cedar. It seems, then, that for our future supply of poles chestnut will ultimately replace cedar, because of its ease of culture, its rapid growth, and its adaptability to use.

GROWTH AND CUTTING OF POLES.

Seed-grown chestnut trees are of slower growth than sprouts, and much fewer poles are cut from them. Of the 550 poles cut at Parkton, more than 60 per cent came from sprout trees. The average age of the sprouts was 47 years, while that of the seed trees was 57. All these sprouts came from stumps that were poorly cut and had been given no protection whatever. Had the stumps been cut without a slant and the sprouts been given a proper amount of light, it is probable that few of them would have been over 42 years of age. Some poles which met the standard requirement of 36 inches basal circumference were only 32 years old. No trees should be cut in summer or early autumn, for the stumps will not sprout, or, at best, will send forth only weak shoots. The greatest number of vigorous sprouts come from winter cuttings.

There is practically no difference in the taper between poles from sprout and those from seed-grown trees. This is shown in Table 1. No difference in specifications, therefore, need be made between the two classes.

TABLE 1.—*Comparison of poles cut from sprout and seed trees.*^a

Class	Tree.			Pole.			
	Age.	Height.	Circumference outside bark (4 feet 6 inches from the ground).	Circumference inside bark.		Circumference taper between 6 foot and 30 foot points.	Basis poles.
				At 6 feet.	At 30 feet.		
	Years.	Feet.	Inches.	Inches.	Inches.	Inches.	Number
Seed.....	56	72	43.77	37.28	27.82	9.46	146
Sprout.....	51	77	45.57	37.64	28.42	9.22	118

^a Since specifications for poles are given in circumferences and not in diameters, the former are used exclusively, in this report.

Careless cutting frequently causes decay in the stump. This decay enters the young sprouts and forms a hollow heart. Fifteen

^c Bulletin 53, "Chestnut in Southern Maryland."

per cent of the poles cut at Parkton were decayed at the base, and 71 per cent of these were from sprout trees. The diameters of the holes varied from one-half inch to 5 inches, and the decay extended up the pole from 1 to 4 feet. Had the stumps been cut low, with a decided pitch to their surface, there would have been fewer decayed trees.

Chestnut belongs to a group of woods having a "ring porous" structure; that is, the concentric rings of large tubes which conduct water and are formed in the spring are plainly visible. The faster the growth of the tree, the greater is the amount of the denser summer wood which forms later in the year. This is the part which gives strength to the pole. A sprout-grown pole, therefore, possesses greater strength than one grown from seed. In brief, the best chestnut poles come from trees grown under a coppice management, because (1) a shorter rotation is necessary to grow them; (2) they give to the grower quicker and larger returns on the investment; and (3) they are stronger and hence safer under strain.

The height at which a pole is cut materially affects its taper. Other things being equal, a "rigid" pole—that is, one with a decided taper—is better than a "top-heavy" pole, or one with little or no taper. If cut low, the basal swelling of the tree will be included in the pole; if cut high, it will be excluded. Hence it is best for both silvical and commercial reasons to cut trees low.

It is well known that trees grown upon high elevations have a greater taper in the trunk than those grown lower down, because the soil is both shallower and drier. Poles cut from such trees, therefore, have the most taper. In the region where this study was made, the differences in elevation amounted to only 150 feet, but even this caused a marked variation. This is shown in Table 2, which is based upon 82 poles cut at exactly the same height above the ground.

TABLE 2.—*Taper in valley and hill-grown poles.*

Class.	Tree height.	Circumference inside bark.		Pole taper, circumference.
		At 6 feet.	At 30 feet.	
	<i>Feet.</i>	<i>Inches.</i>	<i>Inches.</i>	<i>Inches.</i>
Valley.....	74	37.93	28.02	9.91
Hill.....	66	38.07	27.23	10.84

As a result, the center of gravity in hill-grown poles is nearer the butt. For every inch increase in taper the center of gravity

is about 0.15 foot lower down. In a normal pole, when the taper is about 10 inches, the center of gravity is 13.2 feet from the large end.

Specifications of the American Telephone and Telegraph Company require that a standard 30-foot chestnut pole shall be not less than 36 inches in circumference 6 feet from the butt, nor less than 22 inches in circumference at the top. A sound pole 28 inches in basal circumference is strong enough to stand the strains of a standard 30-foot pole, but as a precaution, and on account of decay, 36 inches is specified. If decay can be arrested through preservative treatment, this 8-inch allowance can be safely reduced. The top circumference would, of course, be correspondingly decreased. To find what form of pole would result from using a minimum 20-inch top circumference, as is now done in the smaller classes of poles, the tops of 350 trees, from which 30-foot poles were cut, were measured. It was found that such poles would vary in length from 30 to 55 feet. The average increased length for those grown on hilltops was 10 feet, and for those grown on slopes and in valleys 15 feet. When the tops of trees left after the poles had been cut were utilized for cordwood, 9 to 13 cords were obtained from 100 trees, which, valued at \$3 per cord, increased the gross value of the trees from 13 to 20 per cent. Utilization of the tops, moreover, improves the condition of the forest.

SEASONING.

The absolute green weight of chestnut varies with the season. This is shown in Table 3.

TABLE 3.—*Seasonal variation in weight per cubic foot.*

Season.	Poles weighed.	Green weight per cubic foot.
	Number.	Pounds.
Spring.....	150	55.6
Summer.....	100	56.1
Autumn.....	150	56.4
Winter.....	150	56.4

This variation in density is due to the greater amount of water and food materials stored in the tree in winter. The oven-dry weight of chestnut, obtained by sawing disks from the poles and drying them at 100° C. until they ceased to lose moisture, was 30.4 pounds per cubic foot. This weight is used as a basis throughout this report.

The rates at which chestnut poles, cut at different seasons, lost moisture are shown in Table 4 and figure 1.

TABLE 4.—Rate of seasoning of chestnut poles cut at different times of the year.

Time seasoned.	Fall cut.		Winter cut.		Spring cut.		Summer cut.	
	Moisture content.	Weight per cubic foot.	Moisture content.	Weight per cubic foot.	Moisture content.	Weight per cubic foot.	Moisture content.	Weight per cubic foot.

270.....	53.0	46.5	49.3	45.4				
300.....	50.8	45.8						
330.....	49.1	45.3						
360.....	47.8	44.9						

Table 4 broadly substantiates the results of former experiments, which indicated that the most rapid drying occurs in summer-cut poles and the most uniform drying in those cut in winter.

FIG. 1.—Rates of seasoning of chestnut poles cut at different times of the year.

The reduction in weight due to seasoning is of much practical importance in decreasing the cost of shipping. Fifty green 30-foot poles loaded upon a car weigh about 56,100 pounds. The freight rate for short hauls is about 15 cents per hundredweight.

It costs, therefore, \$84.15 to ship such a load. If the poles are seasoned for the periods given in Table 5, the cost of shipment will be reduced about 13 per cent, a net saving of approximately \$11 per car. The periods given in this table minimize the insurance and storage charges, and secure the most favorable reduction in the cost of shipping.

TABLE 5.—*Shipping table.*

Cutting season.	Ship after—	Shipping weight per cubic foot.	Moisture content compared with oven-dry weight.	Freight saved.
	Months.	Pounds.	Per cent.	Per cent.
Summer.....	2	48.8	60.6	13.0
Spring.....	3	48.6	60.0	12.6
Winter.....	5	48.8	60.6	13.5
Autumn.....	7	48.4	59.2	14.2

Minor points about which information was sought are discussed in the following paragraphs only in brief, but the results show how misconceived are many of the claims which have been made regarding the seasoning of poles.

Poles cut from trees grown in valleys lose about 6 per cent more moisture after six months' seasoning than those cut from trees grown on hilltops. Other things being equal, there is practically no difference between the rates of seasoning of sprout and of seed-grown poles.

Patches of bark which adhere to peeled poles decrease the rate of seasoning; they also resist the absorption of rainwater. The difference in weight at the end of one month's seasoning between those with bark and those without was 20 pounds per pole, but at the end of one year's seasoning both contained the same percentage of moisture.

The top of a pole seasons faster at first than the butt—a condition ultimately reversed. These differences cause a small shifting in the position of the center of gravity, but in no case more than an inch.

Poles exposed to the sun and wind season faster than poles skidded in protected localities. At the end of ten months' seasoning, poles skidded under the former conditions lost 26 pounds per pole more than those skidded in protected places. Skids should be built over ground which is as free of vegetation as possible. A skid built over bare ground lost, at the end of eight months' season-

ing, 35 pounds more per pole than one built over a rank growth of vegetation.

Poles absorb and lose rain-water very rapidly. Absolutely green poles absorbed one-half pound per cubic foot in a rain storm of only 1.01 inches, while thoroughly seasoned poles frequently absorbed more than twice that amount.

SHRINKAGE AND CHECKING.

Shrinkage.

All of the poles were measured as in the previous experiments to ascertain the amount of shrinkage. The results obtained strengthen the former conclusions—that the shrinkage is so slight as to be almost negligible. In no case, even after fourteen months' seasoning, was it more than 0.3 inch. Hence the common impression that poles shrink three-fourths of an inch in circumference is entirely erroneous.

The periphery of a pole is very susceptible to meteorological influences. A rain of only 0.6 inch annulled results of four months' shrinkage, but forty-eight hours after the rainfall the poles were again in normal condition.

Another misconception is that poles expand on freezing. Green poles measured before and after being frozen showed no change in the size of their periphery.

Checking.

Checks in a pole decrease its strength. In general, the greater their number and the larger their size, the weaker the pole. The characteristic checks in autumn-cut and winter-cut poles are numerous and small, seldom penetrating more than $1\frac{1}{2}$ inches into the pole. Checks in spring-cut and summer-cut poles are few in number, but large and deep, sometimes $1\frac{3}{4}$ inches wide, $2\frac{1}{2}$ inches deep, and 10 feet long. Besides weakening the pole, these big checks serve as pockets for the retention of rain water. As a result, winter-cut poles are superior in strength and durability to those cut in other seasons.

Defects such as cup shakes, frost cracks, or splits from careless cutting may seriously damage the pole, especially if it be cut in spring or summer. Such defects, which are incipient in green poles, sometimes expand until they form a split a foot or more wide at the end and over 9 feet long. If such poles are treated immediately with S-irons, serious checking is prevented. Forty poles were treated in this experiment, and in none of them did the

check expand more than one-half inch in width. The S-irons were made of iron one-eighth inch thick, 1 inch wide, and from 3 to 6 inches long, bent in the form of a letter S. They were driven into the ends of the pole over the check.

The practice of dragging poles for long distances over the ground should be vigorously discouraged, because thereby the outer layers of the wood are broken and sheared and the strength of the pole is materially lessened. Moreover, a pole in this condition is very susceptible to decay, because of the numerous crevices in which spores can lodge and in which rain-water can settle.

There was no apparent difference in the checking of soaked and unsoaked poles.

The size of checks varies with the atmospheric conditions, expanding and contracting with the changes in the moisture content of the air.

Poles cut in autumn and seasoned over winter recheck the following spring.

EFFECT OF SOAKING UPON SEASONING.

Fifteen poles of each month's cut were allowed to season one week and were then submerged in water for two weeks. It has been claimed that soaking dissolves out certain contents in the cells of the wood and causes it to dry more rapidly. The results in Table 6 show that this is true, but the difference in the rates of seasoning is so slight that it does not warrant the cost of the operation.

PRESERVATIVE TREATMENTS.

Brush Treatment.

In previous experiments with brush treatment the temperature and weight of the oil were taken before and after it was applied to each pole. This was too great a degree of refinement and entailed too much delay, considering the roughness of the work. In the later experiments the oil was heated in a large iron pot to about 220° F., poured into pails, and applied to the poles with brushes until it had fallen to a temperature of 200° F., when it was again reheated. Usually 5 poles could thus be treated at one time, which greatly facilitated and quickened the work. With this exception the operation followed the lines which had already been practiced.

Table 7 shows that carbolineum and creosote are absorbed in equal amounts; the first coat absorbed slightly more than the second. The depths of penetration with the two oils were also equal and averaged about one-eighth inch.

TABLE 7.—*Absorption of creosote and carbolineum by the brush method.**

a 92 poles were treated with each material.

Best results are obtained by applying brush treatments to only thoroughly seasoned and dry poles. Oil applied to green poles will not penetrate, and the poles will check on drying. Many of the failures in brush treatment are due to this cause. Checks in seasoned poles are wholly or partly closed by rains, and if the poles are treated with oil while they are wet, the checks reopen when the poles dry and untreated surfaces will be exposed.

There was no difference in the way soaked and unsoaked poles took treatment.

A crew of three men can treat about 50 poles per hour with the brush, if two men paint and one man turns the poles on the skids.

Open-tank Treatment.

The apparatus used in the open-tank treatments was the same as that used in former experiments. The method of treating, however, was modified to obtain more detailed information.

There were three main questions upon which data were desired:

(1) What effect has a long duration in hot oil upon the treatment?

(2) What effect has a rapid change from hot to cold oil upon the treatment?

(3) Do poles which have been soaked in water and then seasoned take better preservative treatment?

The treatments were therefore divided into three series. The results are given in Table 8.

TABLE 8.—*Results of open-tank treatment.*

SERIES 1.—EFFECT OF DURATION IN HOT OIL.

Period of immersion.			Temperature of hot oil.	Density of outer inch.	Penetration.	Average absorption of creosote.	Basis poles.
Hot oil.	Cooling oil.	Cold oil.					
Hours.	Hours.	Hours.	° F.	Rings.	Inches.	Pounds.	Number.

SERIES 3.—EFFECT OF SOAKING IN WATER.

8	14	225	7	0.34	17.6	8
6	14	229	10	.31	19.6	16
4	14	227	7	.35	19.1	8
4	2	233	9	.35	24.4	16

Effect of Duration in Hot Oil.

Series 1 shows that there is no apparent advantage in leaving chestnut poles in hot oil longer than six hours. In those species which have a wide sapwood but the same thermal conductivity as chestnut, a longer duration in hot oil would, of course, result in a greater absorption and penetration. Because of its narrow sapwood, heating chestnut longer than six hours produces no better absorption; it volatilizes an unnecessary amount of oil, and increases the total cost of treatment.

Effect of Plunging Poles Into Cold Oil.

It took about twenty-one hours to secure a penetration of 0.31 inch and an absorption of 22 pounds, in the poles treated in series 1. In series 2, where the poles were heated in the hot-oil tank, and then immediately dropped into the tank filled with cold oil, practically the same results were accomplished in about one-third the time. This was due to the more rapid contraction of air in the heated wood, and a more complete utilization of the partial vacuum that had been formed. For a commercial treatment, variations of this method are recommended.

FIG. 2.—Relation of rate of growth with penetration and absorption of creosote in chestnut poles.

Effect of Soaking in Water.

Series 3, with 48 poles as a basis, shows that soaking poles in water for 2 weeks resulted in no better absorption and penetration of the oil.

Effect of Rate of Growth Upon Treatment.

In general, the more rapid the rate of growth in chestnut, the wider the sapwood and the larger the amount of oil absorbed. The relation between the rate of growth and the absorption and penetration of the oil is shown by curves in figure 2, based on the analyses of 70 poles. Chestnut cut during the period of maximum rate of diameter growth is, therefore, in best condition, structurally, for treatment with creosote in the open tank, as it permits a greater absorption and deeper penetration by the oil—the two factors which, other things being equal, determine the effectiveness of treatment. The effect of rate of growth upon penetration and absorption of creosote is shown in figure 2.

Effect of Cutting Season Upon Treatment.

Effectiveness of treatment is independent of the cutting season. When differences in treatment occur, they are to be attributed more to differences in the moisture content of the poles than to differences in their physiological conditions. Thus, if chestnut poles cut at different seasons be dried to the same degree of moisture, the results of treatment will be the same. Table 9 shows the results obtained in this experiment.

TABLE 9.—*Effect of season of cutting upon treatment.*

Cutting season.	Absorption.	Penetration.	Age last inch.	Moisture content.
	<i>Pounds.</i>	<i>Inch.</i>	<i>Rings.</i>	<i>Per cent.</i>
Winter.....	23.8	.41	9	48.4
Spring.....	23.2	.36	9	48.9
Summer.....	22.8	.34	10	49.4

Effect of Rainfall.

When experiments are conducted in the open, rainstorms destroy the uniformity of results. Thus when poles were wet they absorbed from 10 to 15 per cent less oil than when they were dry. This can be obviated somewhat by raising the temperature of the oil. Temperatures above 230° F., however, are not recommended, except as an emergency measure when the poles are wet, on account of the increased volatilization of the oil.

Effect of Dragging Poles.

Poles that were damaged by dragging for long distances over the ground could not be given a satisfactory treatment. These poles frequently had portions of the sapwood entirely removed, and on such portions only a superficial penetration of the oil was obtained. Poles which had about one-fourth of their sapwood ground off absorbed 26 per cent less oil than those with entire sapwood. Uniformity of treatment gives best results; hence dragging should be vigorously discouraged.

Treatment of Poles Cut from Inferior Trees.

Chestnut poles cut from intermediate or suppressed trees grown in valleys and in moist soil are not adapted to treatment in the open tank. A number of such poles were treated, and they absorbed only 13 pounds of oil per pole. Their penetration was only 0.19 inch. Poles of this character can be distinguished from others, as their wood is exceedingly soft and their rate of growth is very slow.

Cost of Treatments.

Estimates on the cost of treatment and the economy derived therefrom have been given.^a The variation in the method of brush treatments used later, however, brought the cost of this operation down to a commercial basis. It has been shown that chestnut poles absorbed about 4.8 pounds of oil (either creosote or carbolineum) in two brush applications. If creosote costs 12 cents and carbolineum 80 cents per gallon, the total cost of treating a pole with creosote is about 12 cents and with carbolineum 50 cents, allowing 5 cents for labor for each.

CONCLUSIONS.

The results of the experiments at Parkton corroborate, on the whole, those obtained from former investigations.

The rapid growth of chestnut, coupled with its other intrinsic qualities, renders it one of the best kinds of wood for use as poles, and the demand for it will become of much greater importance in the future.

As the best poles come from sprout trees, care should be exercised in felling. It is sound policy for all pole users to encourage a careful system of cutting.

^a Circular 104, "Brush and Tank Pole Treatments;" Circular 136, "Seasoning and Preservative Treatment of Arborvitæ Poles."

Soaking poles in water preparatory to preservative treatment is not recommended, as it results in no better absorption or penetration of the oil.

Incipient butt or top checks caused by careless cutting or natural defects should be treated with S-irons to prevent the poles from splitting. This applies especially to poles cut in spring and summer.

Chestnut poles seasoned for the periods given in Table 5 will be dry enough for preservative treatment.

The sapwood of chestnut, which is a thin layer, should be completely saturated with the preservative. This can be accomplished by heating the poles in oil for six hours and leaving them in the cooling oil over night, or by heating them in hot oil for four hours and plunging them into cold oil for two hours.

Effectiveness of treatment is independent of the season of cutting, but depends directly upon the moisture content and the width of the sapwood. Chestnut poles cut during the period of maximum rate of diameter growth and thoroughly seasoned admit of best results in preservative treatment. Spring and summer cut poles reach such a condition more quickly than those cut in autumn and winter.

Approved:

JAMES WILSON,
Secretary.

WASHINGTON, D. C., March 9, 1908.

Consumption of Poles in 1906

GIFFORD PINCHOT, Forester.

The information in this circular concerning the consumption of poles during 1906 is based upon the number of poles purchased rather than the actual number produced during the year. It seems safe to assume, however, that the two were practically identical. Inquiries were sent out to more than 6,000 companies operating telegraph and telephone lines, electric light and power systems, trolley and street railway lines, and to railroad companies which operate their own telegraph or telephone lines. Practically all replied. The number of poles purchased during the year, as shown by these statistics, was 3,574,666, valued at \$9,471,171 at the point of purchase. These figures do not include poles less than 20 feet long. Shorter poles are used for local lines and for temporary work, but they constitute only a small percentage of the total.

WOODS USED.

Table 1 shows, by kinds of woods, the quantity and value of round and sawed poles purchased in 1906. In both classes cedar ranks first and chestnut second. These two together furnish nearly nine-tenths of all the poles used, cedar supplying about three-fifths and chestnut over one-fourth.

In average value per pole at the point of purchase, pine stands highest. This is due not to greater intrinsic value of the wood, but to the greater proportion of large pine poles as compared with other kinds. Oak shows the lowest average value. The average price per pole for all kinds of timber in the United States was \$2.65. Round poles brought an average of \$2.63 and sawed poles \$4.22 each. The higher cost of the sawed product is due chiefly to the additional labor and material necessary in their manufacture.

Cedar and chestnut are the principal trees cut for round poles; pine and redwood the chief ones sawed. Redwood is seldom found small enough to use for round poles. The sapwood of pine decays rapidly; consequently a sawed pine pole from which the sapwood has been removed will last longer than a round one. The average per pole values of the different kinds of wood are interesting in a general way, but can not be used for exact comparisons because the different sizes of poles are not distinguished. The explanation for the apparently unreasonable discrepancy between the values of round and sawed cedar poles is found in the fact that all the sawed cedar poles are of small sizes.

SIZES USED.

Table 2 shows the quantity and value of the different kinds of poles, classified by length. It was found impracticable to attempt a classification by both length and top diameter, because complicated tables would have resulted. The first class covers all poles from 20 to 25 feet long, inclusive; the second those from 26 to 30, inclusive; the third those from 31 to 35, and so on. The last class presented embraces all poles 41 feet or more in length.

The shortest or 25-foot class takes in three-fourths of the redwood poles, three-fifths of the cedar, one-half of the chestnut, and two-fifths of the juniper. With cypress the quantities are more evenly distributed among the 25, 30 and 35-foot sizes.

The price of the poles at the point of purchase is the basis on which their value was determined. In theory this price might be supposed to represent the spot value of the poles at the nearest point of shipment. In practice, however, this is not always the case. For example, one consumer may purchase directly from the

producer, and the cost of poles at the point of purchase is then the spot value, while another company operating in the same territory as the first may deal with a local middleman, in which case the cost at the point of purchase includes transportation charges. This condition is, at least partly, the cause of the differences between the values per pole of different woods in the same size class as shown in Table 2. The smallest size class of cedar pole, for example, shows a lower average value than the corresponding pine and chestnut poles—that is, cedar poles are oftener purchased at the point of production than are pine or chestnut. There is a possibility also that within this class size there are more short cedar poles than is the case with the other woods.

NUMBER OF POLES USED BY VARIOUS KINDS OF ELECTRICAL COMPANIES.

Table 3 shows the kind, quantity, and value of the poles bought by the four principal classes of consumers—telegraph and telephone companies, steam railroad companies, street railway companies, and electric light and power companies. The street railways are grouped with the electric light and power companies, because not infrequently one company serves in a double capacity and separation was impossible.

The telegraph and telephone companies purchased about two-thirds of the total number reported and the street railway, light, and power companies about one-fourth. The remainder is credited to railroad companies which own and operate their own telegraph or telephone lines.

SUPPLY.

The regions of supply of the two principal pole timbers—cedar and chestnut—are fairly well defined and are, unfortunately, extremely limited. The present source of supply of cedar poles in the United States is confined almost entirely to the Lake States. The total purchase of cedar poles reported for the United States in 1906 was 2,174,279. The production of the Northwestern Cedarman's Association, which operates in the Lake States, as shown by the association statistics, was more than 1,700,000. The greater part of the production outside the Lake States can be credited to two sources—Maine and the adjoining States, including the Adirondacks in New York, and the Idaho cedar territory. From these districts cedar poles are shipped to practically every State in the Union.

The regions from which the supply of chestnut poles is drawn are even narrower. A small territory—embracing parts of Pennsylvania, Maryland, Virginia, and West Virginia—furnishes nearly all of these poles. Cypress poles necessarily come from the South, probably the greater part from the Gulf States; juniper, from Virginia, the Carolinas, and other South Atlantic States. Redwood comes wholly from California.

With the regions of supply so restricted, transportation becomes an important factor. The cost of the pole is sometimes doubled by freight charges. This difficulty is obviated, in a measure, by the use of local woods, cypress and pine in the Southern States, for instance, and chestnut and juniper in the Atlantic States. On the Pacific coast cedar is supplemented to a considerable extent by pine and redwood. But such local supplies are insufficient, and cedar and pine are found everywhere.

There are no data available which show even approximately the quantity of cedar still standing in this country or Canada to meet the enormous demand of 2,000,000 poles each year. It is certain, however, that when the present supply is exhausted it will be gone forever, since the cedar, though it reproduces fairly well, grows so slowly that other kinds of trees, chestnut for instance, will be more profitable to produce by systematic management.

SUITABILITY OF VARIOUS WOODS.

There are several qualities which timber must possess to adapt it to use for poles. The most important of these are: Durability in contact with the soil, minimum weight, straightness coupled with relatively small size, and little taper. The wood must be soft, so that the spikes of a climber may enter readily, and at the same time it must have strength to support considerable weight. These qualities are admirably combined in cedar and in juniper, which commercially is a cedar. No other woods possess so many.

Chestnut and cypress are both durable; chestnut is not so straight as cedar and is liable to be knotty. The wood, though soft, is not as soft as cedar. It has greater strength, but this advantage is more than counterbalanced by its greater weight, which prohibits long shipments. Cypress frequently is too large for use as a pole and has greater value for lumber. Even when its general diameter is small enough the butt will often be so big that it adds too much weight. Pine, besides being heavier than cedar, is so much less durable that it can not compete as a pole wood without preservative treatment. Redwood possesses durability, lightness, and softness, but its size necessitates sawing, which adds to the cost.

PRESERVATIVE TREATMENT.

One of the results of the increased cost of poles and the difficulty of obtaining a sufficient quantity of satisfactory stock has been an effort to increase the period of service of poles by preservatives, generally by applying a liquid to the whole of the pole, or, more generally, to the butt, which is most liable to decay. Poles which have not been treated with preservatives may be expected to give from ten to fifteen years of service, roughly speaking.

Creosote is probably more extensively used than any other preservative, though ordinary paint is a common agent. For the butt tar is often employed, and charring by fire is found useful. The American Telephone and Telegraph Company is carrying on exten-

sive experiments in cooperation with the Forest Service to determine the best methods and materials. Several experimental lines of variously treated poles have been erected and careful records of the behavior of each pole is being kept. By the comparatively new open-tank treatment the preservative is forced into the wood of the butt by a much simpler and more inexpensive method than was formerly used.^a

Successful preservatives make possible the use for poles of a great number of otherwise unsuitable timbers, many of them among the cheaper and more abundant woods.

Approved.

Prolonging the Life of Mine Timbers

GIFFORD PINCHOT, Forester.

JOHN M. NELSON, Jr.

THE STUDY.

In the cost of mining and preparing anthracite, timber is a large factor. In 1905 for every ton of coal mined the timber used cost 8 cents, while the annual timber consumption for the whole anthracite region represented the cutting of approximately 150,000 acres of forest. Mine operators know that the rapidly increasing price and the decreasing supply of timber demand that every stick used either outside or inside the mines should be so handled as to give the greatest possible service.

In 1906 the Forest Service, in cooperation with the Philadelphia and Reading Coal and Iron Company, planned and carried on a series of experiments to determine the best methods of prolonging the life of mine timber. The results of the study are contained in this circular.

FACTORS DESTRUCTIVE TO ANTHRACITE MINE TIMBER.

Forty-five per cent. of mine timber is destroyed by decay, while breakage, wear, and insects together destroy the remainder. (See fig. 1.) It is decay and its prevention in which the Forest Service is more especially interested. By direct experiment it is being shown that both oils and chemical salts, and the precaution of peeling and seasoning, prolong the life of the timber. The point of first practical importance, then, is: What method of handling and what preservative treatment will give the greatest service at the least expense?

FIG. 1.—Diagram showing relative importance of the causes of destruction of mine timbers.

Decay.

Decay or rot is produced solely by certain organisms called bacteria and fungi. The species of fungi most destructive to mine timbers are *Fomes annosus* and *Polystictus versicolor*, of which the former is confined almost exclusively to the pines, and the latter is common in red and black oaks.

Germes or spores which produce decay may gain access to the timber at any time before or after it is cut, though for the most part the disease is contracted in the mines from decaying timber near by. In untreated timber, rough surfaces of bark and wood furnish a foothold for the spores, which subsequently germinate and attack the wood tissues. Spores may also enter timber only superficially treated through checks, cracks, or nail wounds.

For a fungus to exist it must have a definite amount of air and water, food, and heat. If mining conditions were such that the timber could be kept always wet or always dry, it would never decay. It is the alternating wet and dry conditions or continuous dampness which produce rot.

Ventilation is a very large factor in the life of mine timber. Poorly ventilated gangways and air passages, with a fair degree of moisture and a fairly high temperature, are favorable to fungous growth, and hence to rapid decay.

It is probably impossible to exterminate disease and so wholly to prevent decay in mine timber. Right preservative treatment, together with careful handling of the timber, will, however, reduce both to a minimum.

Breakage.

A large percentage of the gangway timber used in anthracite mines is broken by the "squeeze" and "crush" of coal and rock. Where timber is certain to be broken in a few days or weeks, expensive preservative treatment would not be economical. However, in many situations the timber is broken only after it has been greatly weakened by decay, and for these cases an inexpensive form of treatment may very properly be considered.

Wear.
